This handbook contains information on the Triumph Street Triple S (600 cc), Street Triple R, Street Triple R (LRH) and Street Triple RS motorcycles. Always store this Owner’s Handbook with the motorcycle and refer to it for information whenever necessary.

The information contained in this publication is based on the latest information available at the time of printing. Triumph reserves the right to make changes at any time without prior notice, or obligation.

Not to be reproduced wholly or in part without the written permission of Triumph Motorcycles Limited.

Publication part number 3855672-US issue 1
# Table of Contents

This handbook contains a number of different sections. The table of contents below will help you find the beginning of each section where, in the case of the major sections, a further table of contents will help you find the specific subject required.

Foreword

Warnings, Cautions and Notes
Throughout this Owner’s Handbook particularly important information is presented in the following form:

**Warning**
This warning symbol identifies special instructions or procedures, which if not correctly followed could result in personal injury, or loss of life.

**Caution**
This caution symbol identifies special instructions or procedures, which, if not strictly observed, could result in damage to, or destruction of, equipment.

**Note**
This note symbol indicates points of particular interest for more efficient and convenient operation.

Warning Labels

At certain areas of the motorcycle, the symbol (above) can be seen. The symbol means CAUTION: REFER TO THE HANDBOOK and will be followed by a pictorial representation of the subject concerned and/or text.

Never attempt to ride the motorcycle or make any adjustments without reference to the relevant instructions contained in this handbook.

For the location of all labels showing this symbol, see the Warning Label Locations section of this Owner’s Handbook. Where necessary, this symbol will also appear on the pages containing the relevant information.

Street Triple R - Low Ride Height (LRH) Models
Unless stated otherwise, the information, instructions, and specifications for the Street Triple R - LRH model is identical to those detailed in this Owner’s Handbook for the Street Triple R standard ride height model.

Maintenance
To ensure a long, safe and trouble free life for your motorcycle, maintenance should only be carried out by an authorized Triumph dealer.

Only an authorized Triumph dealer will have the necessary knowledge, equipment and skills to maintain your Triumph motorcycle correctly.

To locate your nearest authorized Triumph dealer, visit the Triumph web site at www.triumph.co.uk or telephone the authorized distributor in your country. Their address is given in the service record book that accompanies this handbook.
Foreword

Noise Control System
Tampering with the noise control system is prohibited.

Owners are warned that the law may prohibit:

1. The removal or rendering inoperative by any person other than for purposes of maintenance, repair or replacement, of any device or element of design incorporated into any new vehicle for the purpose of noise control prior to its sale or delivery to the ultimate purchaser or while it is in use and.

2. The use of the vehicle after such device or element of design has been removed or rendered inoperative by any person.

Among those acts presumed to constitute tampering are the acts listed below:

• Removal of, or puncturing the muffler, baffles, header pipes or any other component which conducts exhaust gases.
• Removal of or puncturing of any part of the intake system.
• Lack of proper maintenance.
• Replacing any moving parts of the vehicle, or parts of the exhaust or intake system, with parts other than those specified by the manufacturer.

Owner’s Handbook

⚠️ Warning

This Owner’s Handbook, and all other instructions that are supplied with your motorcycle, should be considered a permanent part of your motorcycle and should remain with it even if your motorcycle is subsequently sold.

All riders must read this Owner’s Handbook and all other instructions which are supplied with your motorcycle, before riding, in order to become thoroughly familiar with the correct operation of your motorcycle’s controls, its features, capabilities and limitations.

Do not lend your motorcycle to others as riding when not familiar with your motorcycle’s controls, features, capabilities and limitations can lead to an accident.

Thank you for choosing a Triumph motorcycle. This motorcycle is the product of Triumph’s use of proven engineering, exhaustive testing, and continuous striving for superior reliability, safety and performance.

Please read this Owner’s Handbook before riding in order to become thoroughly familiar with the correct operation of your motorcycle’s controls, its features, capabilities and limitations.

This Owner’s Handbook includes safe riding tips, but does not contain all the techniques and skills necessary to ride a motorcycle safely.
Triumph strongly recommends that all riders undertake the necessary training to ensure safe operation of this motorcycle.

This Owner’s Handbook is available from your local dealer in:

- English
- US English
- Chinese
- Dutch
- French
- German
- Italian
- Japanese
- Portuguese
- Spanish
- Swedish
- Thai.

The languages available for this Owner’s Handbook are dependent on the specific motorcycle model and country.

**Talk to Triumph**

Our relationship with you does not end with the purchase of your Triumph. Your feedback on the buying and ownership experience is very important in helping us develop our products and services for you.

Please help us by ensuring your authorized Triumph dealership has your email address and registers this with us. You will then receive an online customer satisfaction survey invitation to your email address where you can give us this feedback.

Your Triumph Team.
Safety First

The Motorcycle

⚠️ Warning
This motorcycle is designed for on-road use only. It is not suitable for off-road use. Off-road operation could lead to loss of control of the motorcycle resulting in an accident causing injury or loss of life.

⚠️ Warning
This motorcycle is not designed to tow a trailer or be equipped with a sidecar. Installing a sidecar and/or a trailer may result in loss of control and an accident.

⚠️ Warning
Street Triple - Low Ride Height (LRH) Models
The Street Triple R - LRH motorcycles is equipped with lowered suspension and has reduced ground clearance. As a result, the cornering banking angles that can be achieved by the Street Triple R - LRH are reduced, when compared with the standard ride height Street Triple R model. When riding, bear in mind that your motorcycle’s ground clearance is limited. Operate your motorcycle in an area free from traffic to gain familiarity with the motorcycle’s ground clearance and bank angle limitations. Banking to an unsafe angle or unexpected contact with the ground may cause instability, loss of motorcycle control and an accident.

⚠️ Warning
This motorcycle is designed for use as a two-wheeled vehicle capable of carrying a rider on their own, or a rider and one passenger (subject to a passenger seat and footrests being installed). The total weight of the rider, and any passenger, accessories and luggage must not exceed the maximum load limit stated in the Specifications section.
Safety First

**Warning**

This motorcycle is equipped with a catalytic converter below the engine, which along with the exhaust system reaches a very high temperature during engine operation. Flammable materials such as grass, hay/straw, leaves, clothing and luggage etc. could ignite if allowed to come into contact with any part of the exhaust system and catalytic converter. Always make sure that flammable materials are not allowed to contact the exhaust system or catalytic converter.

**Fuel and Exhaust Fumes**

**Warning**

GASOLINE IS HIGLY FLAMMABLE:
Always turn off the engine when refueling.
Do not refuel or open the fuel filler cap while smoking or in the vicinity of any open (naked) flame.
Take care not to spill any gasoline on the engine, exhaust pipes or mufflers when refueling.
If gasoline is swallowed, inhaled or allowed to get into the eyes, seek immediate medical attention.
Spillage on the skin should be immediately washed off with soap and water and clothing contaminated with gasoline should immediately be removed.
Burns and other serious skin conditions may result from contact with gasoline.

**Warning**

Never start the engine or run the engine in a confined area.
Exhaust fumes are poisonous and can cause loss of consciousness and death within a short period of time.
Always operate the motorcycle in the open air or in an area with adequate ventilation.
Helmet and Clothing

⚠️ Warning

When riding the motorcycle, both rider and passenger (on models where carrying a passenger is permitted) must always wear appropriate clothing including a motorcycle helmet, eye protection, gloves, boots, trousers (close fitting around the knee and ankle) and a brightly colored jacket.

During off-road use (on models suitable for off-road use), the rider must always wear appropriate clothing including trousers and boots.

Brightly colored clothing will considerably increase a rider’s (or passenger’s) visibility to other operators of road vehicles.

Although full protection is not possible, wearing correct protective clothing can reduce the risk of injury when riding.

⚠️ Warning

A helmet is one of the most important pieces of riding gear as it offers protection against head injuries. You and your passenger’s helmet should be carefully chosen and should fit you or your passenger’s head comfortably and securely. A brightly colored helmet will increase a rider’s (or passenger’s) visibility to other operators of road vehicles.

An open face helmet offers some protection in an accident though a full face helmet will offer more.

Always wear a visor or approved goggles to help vision and to protect your eyes.

When choosing a helmet, always look for a DOT (Department of Transport) sticker indicating that the helmet has DOT approval. Do not buy a helmet without DOT approval.
Safety First

Parking

⚠️ Warning
Always switch off the engine and remove the ignition key before leaving the motorcycle unattended. By removing the key, the risk of use of the motorcycle by unauthorized or untrained persons is reduced.

When parking the motorcycle, always remember the following:
- Engage first gear to help prevent the motorcycle from rolling off the stand.
- The engine and exhaust system will be hot after riding. DO NOT park where pedestrians, animals and/or children are likely to touch the motorcycle.
- Do not park on soft ground or on a steeply inclined surface. Parking under these conditions may cause the motorcycle to fall over.

For further details, please refer to the ‘How to Ride the Motorcycle’ section of this Owner’s Handbook.

Parts and Accessories

⚠️ Warning
Owners should be aware that the only approved parts, accessories and conversions for any Triumph motorcycle are those which carry official Triumph approval and are installed to the motorcycle by an authorized dealer.

In particular, it is extremely hazardous to install or replace parts or accessories whose installation requires the dismantling of, or addition to, either the electrical or fuel systems and any such modification could cause a safety hazard.

The installation of any non-approved parts, accessories or conversions may adversely affect the handling, stability or other aspect of the motorcycle operation that may result in an accident causing injury or death.

Triumph does not accept any liability whatsoever for defects caused by the installation of non-approved parts, accessories or conversions or the installation of any approved parts, accessories or conversions by non-approved personnel.

Triumph does not accept any liability whatsoever for defects caused by the installation of non-approved parts, accessories or conversions or the installation of any approved parts, accessories or conversions by non-approved personnel.
Maintenance and Equipment

⚠️ Warning
Consult your authorized Triumph dealer whenever there is doubt as to the correct or safe operation of this Triumph motorcycle.
Remember that continued operation of an incorrectly performing motorcycle may aggravate a fault and may also compromise safety.

⚠️ Warning
Make sure all equipment that is required by law is installed and functioning correctly.
The removal or alteration of the motorcycle’s lights, mufflers, emission or noise control systems can violate the law.
Incorrect or improper modification may adversely affect the handling, stability or other aspect of the motorcycle operation, which may result in an accident causing injury or death.

⚠️ Warning
If the motorcycle is involved in an accident, collision or fall, it must be taken to an authorized Triumph dealer for inspection and repair.
Any accident can cause damage to the motorcycle that, if not correctly repaired, may cause a second accident that may result in injury or death.

Riding

⚠️ Warning
Never ride the motorcycle when fatigued or under the influence of alcohol or other drugs.
Riding when under the influence of alcohol or other drugs is illegal.
Riding when fatigued or under the influence of alcohol or other drugs reduces the rider’s ability to maintain control of the motorcycle and may lead to loss of control and an accident.

⚠️ Warning
All riders must be licensed to operate the motorcycle.
Operation of the motorcycle without a license is illegal and could lead to prosecution.
Operation of the motorcycle without formal training in the correct riding techniques that are necessary to become licensed is dangerous and may lead to loss of motorcycle control and an accident.

⚠️ Warning
Always ride defensively and wear the protective equipment mentioned elsewhere in this foreword.
Remember, in an accident, a motorcycle does not give the same impact protection as a car.
Safety First

⚠️ Warning

This Triumph motorcycle should be operated within the legal speed limits for the particular road traveled.

Operating a motorcycle at high speeds can be potentially dangerous since the time available to react to given traffic situations is greatly reduced as road speed increases.

Always reduce speed in potentially hazardous driving conditions such as bad weather or heavy traffic.

⚠️ Warning

Continually observe and react to changes in road surface, traffic and wind conditions. All two-wheeled vehicles are subject to external forces which may cause an accident. These forces include but are not limited to:

- Wind draft from passing vehicles
- Potholes, uneven or damaged road surfaces
- Bad weather
- Rider error.

Always operate the motorcycle at moderate speed and away from heavy traffic until you have become thoroughly familiar with its handling and operating characteristics. Never exceed the legal speed limit.

Wobble/Weave

A weave is a relatively slow oscillation of the rear of the motorcycle, while a wobble is a rapid, possibly strong shaking of the handlebar. These are related but distinct stability problems usually caused by excessive weight in the wrong place, or by a mechanical problem such as worn or loose bearings or under-inflated or unevenly worn tires.

Your solution to both situations is the same. Keep a firm hold on the handlebars without locking arms or fighting the steering. Smoothly ease off the throttle to slow gradually. Do not apply the brakes, and do not accelerate to try to stop the wobble or weave. In some cases, it helps to shift your body weight forward by leaning over the tank.

Copyright © 2005 Motorcycle Safety Foundation. All rights reserved. Used with permission.
Handlebars and Footrests

⚠️ Warning
The rider must maintain control of the motorcycle by keeping hands on the handlebars at all times. The handling and stability of a motorcycle will be adversely affected if the rider removes their hands from the handlebars, resulting in loss of motorcycle control and an accident.

⚠️ Warning
The rider and passenger (if applicable) must always use the footrests provided, during operation of the motorcycle. By using the footrests, both rider and passenger will reduce the risk of inadvertent contact with any motorcycle components and will also reduce the risk of injury from entrapment of clothing.

⚠️ Warning
Use of a motorcycle with bank angle indicators worn beyond the maximum limit will allow the motorcycle to be banked to an unsafe angle. Therefore, always replace the bank angle indicators before they are worn to their maximum limit. Banking to an unsafe angle may cause instability, loss of motorcycle control and an accident. Details of the bank angle wear limits can be found in the Maintenance and Adjustment section.

⚠️ Warning
The bank angle indicators must not be used as a guide to how far the motorcycle may be safely banked. This depends on many various conditions including, but not limited to, road surface, tire condition and weather. Banking to an unsafe angle may cause instability, loss of motorcycle control and an accident.

⚠️ Warning
When banking and the bank angle indicator, attached to the rider’s footrest, makes contact with the ground, the motorcycle is nearing its bank angle limit. A further increase of the banking angle is unsafe. Banking to an unsafe angle may cause instability, loss of motorcycle control and an accident.
Warning Labels

Warning Labels

Warning Label Locations

The labels detailed on this and the following pages draw your attention to important safety information in this handbook. Before riding, make sure that all riders have understood and complied with all the information to which these labels relate.

1. Headlights (page 178)
2. Mirrors (page 155)
3. Breaking-In (page 109)
4. Gears (page 115)
5. Coolant (page 138)
6. Tires (page 168)
7. Drive Chain (page 144)
Caution

All warning labels and decals, with the exception of the Breaking-in label, are mounted on the motorcycle using a strong adhesive. In some cases, labels are installed prior to an application of paint lacquer. Therefore, any attempt to remove the warning labels will cause damage to the paintwork or bodywork.
1. Headlight
2. Fuel filler cap
3. Fuel tank
4. Rear suspension unit
5. Seat lock
6. Tail light

17. Horn button
Serial Numbers

Vehicle Identification Number (VIN)

1. **Vehicle identification number**

The Vehicle Identification Number (VIN) is stamped into the steering head area of the frame. It is also displayed on a label attached to the left hand side of the frame, adjacent to the radiator cowl.

Record the vehicle identification number in the space provided below.

---

Engine Serial Number

1. **Engine serial number**

The engine serial number is stamped on the engine crankcase, directly above the clutch cover.

Record the engine serial number in the space provided below.

Hand Controls

Throttle Control
An electronic throttle twist grip controls the opening and closing of the throttles via the engine’s electronic control module. There are no direct-acting cables in the system.

The throttle grip has a resistive feel to it as it is rolled rearwards to open the throttles. When the grip is released it will return to the throttle closed position by its internal return spring and the throttles will close.

There are no user adjustments for the throttle control.

1. Throttle closed position

⚠️ Warning
Reduce speed and do not continue to ride for longer than is necessary with the Malfunction Indicator Light (MIL) illuminated.

The fault may adversely affect engine performance, exhaust emissions and fuel consumption.

Reduced engine performance could cause a dangerous riding condition, leading to loss of control and an accident. Contact an authorized Triumph dealer as soon as possible to have the fault checked and rectified.

If there is a malfunction with the throttle control the Malfunction Indicator Light (MIL) becomes illuminated and one of the following engine conditions may occur:

• MIL illuminated, restricted engine RPM and throttle movement
• MIL illuminated, limp-home mode with the engine at a fast idle condition only
• MIL illuminated, engine will not start.

For all of the above conditions contact an authorized Triumph dealer as soon as possible to have the fault checked and rectified.

Brake Use
At low throttle opening (approximately 68°F (20°C)), the brakes and throttle can be used together.
At high throttle opening (greater than 20°), if the brakes are applied for longer than two seconds the throttles will close and the engine speed will reduce. To return to normal throttle operation, release the throttle control, release the brakes and then reopen the throttle.

**Ignition Switch/Steering Lock**

**Warning**

For reasons of security and safety, always turn the ignition to the OFF or PARK position and remove the key when leaving the motorcycle unattended.

Any unauthorized use of the motorcycle may cause injury to the user, other road users and pedestrians and may also cause damage to the motorcycle.

**Switch Operation**

This is a four position, key operated switch. The key can be removed from the switch only when it is in the OFF, LOCK or P (PARK) position.

TO LOCK: Turn the steering fully to the left, turn the key to the OFF position, push and fully release the key, then rotate it to the LOCK position.

PARKING: Turn the key from the LOCK position to the P position. The steering will remain locked.
General Information

Note
Do not leave the steering lock in the P position for long periods of time as this will cause the battery to discharge.

Ignition Key

⚠️ Warning
Additional keys, key rings/chains or items attached to the ignition key may interfere with the steering, leading to loss of motorcycle control and an accident.
Remove all additional keys, key rings/ chains and items from the ignition key before riding the motorcycle.

⚠️ Caution
Additional keys, key rings/chains or items attached to the ignition key may cause damage to the motorcycle’s painted or polished components.
Remove all additional keys, key rings/ chains and items from the ignition key before riding the motorcycle.

1. Key number tag
In addition to operating the ignition switch/steering lock, the ignition key is required to operate the seat lock and fuel tank cap.
When the motorcycle is delivered from the factory, two ignition keys are supplied together with a small tag bearing the key number. Make a note of the key number and store the spare key and key number tag in a safe place away from the motorcycle.
There is a transponder within the ignition keys to turn off the engine immobilizer. To make sure the immobilizer functions correctly, always have only one of the ignition keys near the ignition switch. Having two ignition keys near the switch may interrupt the signal between the transponder and the engine immobilizer. In this situation the engine immobilizer will remain active until one of the ignition keys is removed.

⚠️ Caution
Do not store the spare key with the motorcycle as this will reduce all aspects of security.
Always get replacement keys from your authorized Triumph dealer. Replacement keys must be ‘paired’ with the motorcycle’s immobilizer by your authorized Triumph dealer.

**Engine Immobilizer**

The ignition barrel housing acts as the antenna for the engine immobilizer. When the ignition switch is turned to the OFF position and the ignition key is removed, the engine immobilizer is active (see page 74). The engine immobilizer is deactivated when the ignition key is in the ignition switch and it is turned to the ON position.

**Brake Lever Adjusters**

**Warning**

Do not attempt to adjust the levers with the motorcycle in motion as this may lead to loss of motorcycle control and an accident.

After adjusting the levers, operate the motorcycle in an area free from traffic to gain familiarity with the new lever setting.

Do not loan your motorcycle to anyone as they may change the lever setting from the one you are familiar with causing loss of motorcycle control and an accident.

**Brake Lever - Street Triple RS**

There are two adjusters installed to the brake lever: a span adjuster and a ratio adjuster.

1. Brake lever
2. Span adjuster
3. Ratio adjuster

**Span Adjuster**

The span adjuster allows the distance from the handlebar to the brake lever to be changed to suit the span of the rider’s hands.

To adjust the brake lever span:

- Rotate the span adjuster counter-clockwise to decrease the distance to the handlebar or clockwise to increase the distance from the handlebar.
- The distance from the handlebar grip to the released brake lever is shortest when the span adjuster is rotated fully counter-clockwise.

**Ratio Adjuster**

The ratio adjuster moves the brake master cylinder push rod to the left or right in 0.04 in (1 mm) increments from 0.75 in (19 mm) to 0.83 in (21 mm).
General Information

To adjust the brake lever ratio:
- Rotate the ratio adjuster to the rider’s preferred position. The ratio adjuster can be rotated both clockwise and counter-clockwise to set the required preference.
- An audible click can be heard when the ratio adjuster is locked into position.
- The ratio adjuster has three lever positions:
  - 19 (0.75 in (19 mm)) for a softer brake feel with a longer lever travel
  - 20 (0.78 in (20 mm)) for a firmer brake feel and a medium lever travel
  - 21 (0.8 in (21 mm)) for a firm brake feel and a shorter lever travel.

Brake Lever - Street Triple S (40.2 cu in (660 cc))

A span adjuster is installed to the brake lever. The adjuster allows the distance from the handlebar to the brake lever to be changed to suit the span of the rider’s hand.

To adjust the brake lever:
- Push the brake lever forward and turn the adjuster wheel to align one of the numbered positions with the arrow mark on the lever holder.
- The distance from the handlebar grip to the released brake lever is shortest when set to number five and longest when set to number one.

Clutch Lever Adjusters

⚠️ Warning

Do not attempt to adjust the levers with the motorcycle in motion as this may lead to loss of motorcycle control and an accident.

After adjusting the levers, operate the motorcycle in an area free from traffic to gain familiarity with the new lever setting.

Do not loan your motorcycle to anyone as they may change the lever setting from the one you are familiar with causing loss of motorcycle control and an accident.
Clutch Lever - Street Triple S (660 cc)

A span adjuster is installed to the clutch lever. The adjuster allows the distance from the handlebar to the clutch lever to be changed to suit the span of the rider’s hand.

1. Clutch lever
2. Adjuster wheel
3. Triangular mark

To adjust the clutch lever:
- Push the clutch lever forward and turn the adjuster wheel to align one of the numbered positions with the triangular mark on the lever holder.
- The distance from the handlebar grip to the released clutch lever is shortest when set to number four and longest when set to number one.

Clutch Lever - Street Triple RS

A span adjuster is installed to the clutch lever. The adjuster allows the distance from the handlebar to the clutch lever to be changed to suit the span of the rider’s hand.

1. Span adjuster
2. Clutch lever

To adjust the clutch lever span:
- Rotate the span adjuster counter-clockwise to decrease the distance to the handlebar or clockwise to increase the distance from the handlebar.
- The distance from the handlebar grip to the released clutch lever is shortest when the adjuster wheel is adjusted fully counter-clockwise.
General Information

Right Handlebar Switches

Street Triple RS Only

1. Home button
2. START position
3. RUN position
4. STOP position
5. Hazard warning light switch

STOP Position

The STOP position is for emergency use. If an emergency arises which requires the engine to be stopped, move the engine start/stop switch to the STOP position.

Note

Although the engine stop switch stops the engine, it does not turn off all the electrical circuits and may cause difficulty in restarting the engine due to a discharged battery. Ordinarily, only the ignition switch should be used to stop the engine.

RUN Position

In addition to the ignition switch being turned to the ON position, the engine start/stop switch must be in the RUN position for the motorcycle to operate.

START Position

The START position operates the electric starter. For the starter to operate, the clutch lever must be pulled to the handlebar.

Note

Even if the clutch lever is pulled to the handlebar, the starter will not operate if the side stand is down and a gear is engaged.

Hazard Warning Lights

To turn the hazard warning lights on or off, press and release the hazard warning light switch.

The ignition must be switched ON for the hazard warning lights to function.

The hazard warning lights will remain on if the ignition is switched off, until the hazard warning light switch is pressed again.

Home Button

The HOME button is used to access the main menu on the instrument display.
Press and release the HOME button to select between the main menu and instrument display.

Right Handlebar Switches

All Models except Street Triple RS

1. Engine start/stop switch
2. STOP position
3. RUN position
4. Start position
5. Hazard warning light switch

STOP Position

The STOP position is for emergency use. If an emergency arises which requires the engine to be stopped, move the engine start/stop switch to the STOP position.

Note

Although the engine stop switch stops the engine, it does not turn off all the electrical circuits and may cause difficulty in restarting the engine due to a discharged battery. Ordinarily, only the ignition switch should be used to stop the engine.

RUN Position

In addition to the ignition switch being turned to the ON position, the engine start/stop switch must be in the RUN position for the motorcycle to operate.

START Position

The START position operates the electric starter. For the starter to operate, the clutch lever must be pulled to the handlebar.

Note

Even if the clutch lever is pulled to the handlebar, the starter will not operate if the side stand is down and a gear is engaged.

Hazard Warning Lights

To turn the hazard warning lights on or off, press and release the hazard warning light switch.

The ignition must be switched ON for the hazard warning lights to function.

The hazard warning lights will remain on if the ignition is switched to the PARK position, until the hazard warning light switch is pressed again.
General Information

Left Handlebar Switches
Street Triple RS Only

1. Mode button
2. Joystick
3. Horn button
4. Turn signal switch
5. High beam button
6. Dipped beam/Daytime Running Lights (DRL) switch (if equipped)

Mode Button
When the MODE button is pressed and released it will activate the Riding Mode Selection Menu in the multifunction display screen. Further presses of the mode button will scroll through the available riding modes (see page 50).

Joystick Button
The JOYSTICK is used to operate the following functions of the instruments:
• Up - scroll the menu bottom to top
• Down - scroll the menu top to bottom
• Left - scroll the menu to the left
• Right - scroll the menu to the right
• Centre - press to confirm selection

Horn Button
When the horn button is pushed, with the ignition switch turned on, the horn will sound.

Turn Signal Switch
When the turn signal switch is pushed to the left or right, the corresponding turn signals will flash on and off.

The turn signals can be canceled manually. To manually turn off the turn signal, press and release the turn signal switch in the central position.

Automatic self-canceling turn signals can be activated in the Bike Set Up function on the display, refer to page 54.

There are two options available:
• Manual - The self-canceling function is off. The turn signals must be manually canceled.
• Auto - The self-canceling function is on. The signals will activate for eight seconds plus an additional 71 yards (65 meters).

Note
If the motorcycle stops for any reason, the signals will flash for the remainder of the time and distance unless manually canceled by the rider.

Daytime Running Lights (DRL) (if equipped)
When the ignition is switched ON and the daytime running lights switch is set to Daytime Running Lights, the daytime running lights warning light will illuminate.
The daytime running lights and low beam headlights are operated manually using a switch on the left hand switch housing, see page 34.

**Warning**

Do not ride for longer than necessary in poor ambient light conditions with the Daytime Running Lights (DRL) in use.

Riding with the Daytime Running Lights when dark, in tunnels or where poor ambient light is apparent may reduce the riders vision or blind other road users.

Blinding other road users or reduced vision in low ambient light levels may result in loss of motorcycle control and an accident.

**Note**

During daylight hours the Daytime Running Lights (DRL) improve the motorcycles visibility to other road users.

Low beam headlights must be used in any other conditions unless the road conditions allow for high beam headlights to be used.

**High Beam Button**

If the Daytime Running Light (DRL) switch is in the dip beam position, when the High Beam button is operated then the high beam will be switched on. Each press of the button will swap between dip and high beam.

If the DRL switch is in the daytime running lights position, then press and hold the High Beam button to turn the high beam on. It will remain on as long as the button is held in and will turn off as soon as the button is released.

**Note**

A lighting on/off switch is not installed on this model. The position light, tail light and license plate light all function automatically when the ignition is turned to the ON position.

The headlight will function when the ignition switch is turned to the ON position.

**Left Handlebar Switches**

*All Models except Street Triple RS*

1. MODE button
2. Horn button
3. Turn signal switch
4. TRIP button
5. High beam button
General Information

Mode Button
When the MODE button is pressed and released it will activate the Riding Mode Selection Menu in the multifunction display screen. Further presses of the mode button will scroll through the available riding modes, see page 86.

Trip Button
The SCROLL button is used to operate the following functions of the instruments:
- Trip meter
- Odometer
- Tire Pressure Monitoring System (if equipped).

Turn Signal Switch
When the turn signal switch is pushed to the left or right and released, the corresponding turn signals will flash on and off. To turn off the turn signals, push and release the switch in the central position.

Automatic Self-Canceling Turn Signals (if equipped)
A short press and release of the turn signal switch to the left or right will cause the corresponding turn signals to flash on and off three times, then go off.
A longer press and release of the turn signal switch to the left or right will cause the corresponding turn signals to flash on and off.
The turn signals are automatically turned off after eight seconds and after riding a further 71 yards (65 meters).
To disable the turn signal self-cancel system refer to the Bike Setup section on page 80.
The turn signals can be canceled manually. To manually turn off the turn signal, press and release the turn signal switch in the central position.

Horn Button
When the horn button is pushed, with the ignition switch turned on, the horn will sound.

High Beam Button
When the high beam button is pressed the high beam will be switched on. Each press of the button will swap between dip and high beam.

Note
A lighting on/off switch is not installed on this model. The position light, tail light and license plate light all function automatically when the ignition is turned to the ON position.
A Pass feature is not available on this model.
The headlight will function when the ignition switch is turned to the ON position. The headlight will go off while pressing the starter button until the engine starts.
Instruments
There are two different types of instrument display depending on the motorcycle model.

TFT Instrument Display
Street Triple RS models are equipped with a full color Thin Film Transistor (TFT) instrument display.

Thin Film Transistor (TFT) Instrument Display
For TFT instrument display operating instructions, see page 38.

LCD Instrument Display
All models except Street Triple RS are equipped with a Liquid Crystal Display (LCD) instrument display.

Liquid Crystal Display (LCD) Instrument Display
For LCD instrument display operating instructions, see page 71.
# General Information

## TFT Instrument Display

17. Gear position
18. Fuel level low warning light
19. ABS warning light
20. High beam warning light
21. Left hand turn signal and hazard warning light
Warning Lights

Note
When the ignition is switched on, the instrument warning lights will illuminate for 1.5 seconds and will then go off (except those which remain on until the engine starts, as described in the following pages).

For additional Warning and Information messages see page 44.

Engine Management System Malfunction Indicator Light (MIL)

The Malfunction Indicator Light (MIL) for the engine management system illuminates when the ignition is switched ON (to indicate that it is working) but should not become illuminated when the engine is running.

If the engine is running and there is a fault with the engine management system the MIL will be illuminated and the general warning symbol will flash. In such circumstances, the engine management system may switch to ‘limp-home’ mode so that the journey may be completed, if the fault is not so severe that the engine will not run.

Warning
Reduce speed and do not continue to ride for longer than is necessary with the MIL illuminated. The fault may adversely affect engine performance, exhaust emissions and fuel consumption.

Reduced engine performance could cause a dangerous riding condition, leading to loss of control and an accident.

Contact an authorized Triumph dealer as soon as possible to have the fault checked and rectified.

Note
If the MIL flashes when the ignition is switched ON contact an authorized Triumph dealer as soon as possible to have the situation rectified. In these circumstances the engine will not start.

Low Oil Pressure Warning Light

With the engine running, if the engine oil pressure becomes dangerously low, the low oil pressure warning light will illuminate.

Caution
Stop the engine immediately if the low oil pressure warning light illuminates. Do not restart the engine until the fault has been rectified.

Severe engine damage will result from running the engine when the low oil pressure warning light is illuminated.
Note
The low oil pressure warning light will illuminate if the ignition is switched ON without running the engine.

Immobilizer/Alarm Indicator Light
This Triumph motorcycle is equipped with an engine immobilizer which is activated when the ignition switch is turned to the OFF position.

Without Alarm Equipped
When the ignition switch is turned to the OFF position, the immobilizer light will flash on and off for 24 hours to show that the engine immobilizer is on. When the ignition switch is turned to the ON position the immobilizer and the indicator light will be off.

If the indicator light remains on it indicates that the immobilizer has a malfunction that requires investigation. Contact an authorized Triumph dealer as soon as possible to have the fault checked and rectified.

With Alarm Equipped
The immobilizer/alarm light will only illuminate when the conditions described in the genuine Triumph accessory alarm instructions are met.

Anti-lock Braking System (ABS) Warning Light
When the ignition switch is turned to the ON position, it is normal that the ABS warning light will flash on and off. The light will continue to flash after engine start-up until the motorcycle first reaches a speed exceeding 6 mph (10 km/h) when it will go off.

Note
Traction control will not function if there is a malfunction with the ABS. The warning lights for the ABS, traction control and the MIL will be illuminated.

The warning light should not illuminate again until the engine is restarted unless there is a fault.

If the warning light becomes illuminated at any time while riding it indicates that the ABS has a malfunction that requires investigation.

⚠️ Warning
If the ABS is not functioning, the brake system will continue to function as a non-ABS equipped brake system.

Do not continue to ride for longer than is necessary with the warning light illuminated.

Contact an authorized Triumph dealer as soon as possible to have the fault checked and rectified. In this situation braking too hard will cause the wheels to lock resulting in loss of motorcycle control and an accident.

Traction Control (TC) Indicator Light
The Traction Control (TC) indicator light is used to indicate that the traction control system is active and is working to limit rear wheel slip during periods of hard acceleration or under wet or slippery road conditions.
General Information

**Warning**

If the traction control is not functioning, care must be taken when accelerating and cornering on wet/slippery road surfaces to avoid rear wheel spin.

Do not continue to ride for longer than is necessary with the engine management system Malfunction Indicator Light (MIL) and traction control warning lights illuminated. Contact an authorized Triumph dealer as soon as possible to have the fault checked.

Hard acceleration and cornering in this situation may cause the rear wheel to spin resulting in loss of motorcycle control and an accident.

If traction control is switched on:

- Under normal riding conditions the TC indicator light will remain off.
- The TC indicator light will flash rapidly when the traction control system is working to limit rear wheel slip during periods of hard acceleration or under wet or slippery road conditions.

If traction control is switched off:

- The TC indicator light will not illuminate. Instead the TC disabled warning light will be illuminated.

**Note**

Traction control will not function if there is a malfunction with the ABS system. The warning lights for the ABS, traction control and the MIL will be illuminated.

---

**Traction Control (TC) Disabled Warning Light**

The TC disabled warning light should not illuminate unless traction control is switched off or there is a malfunction.

If the warning light becomes illuminated at any other time while riding, it indicates that the traction control system has a malfunction that requires investigation.

**Turn Signals**

When the turn signal switch is turned to the left or right, the indicator warning light will flash on and off at the same speed as the turn signals.

**Hazard Warning Lights**

To turn the hazard warning lights on or off, press and release the hazard warning light switch.

The ignition must be switched ON for the hazard warning lights to function.

The hazard warning lights will remain on if the ignition is switched off, until the hazard warning light switch is pressed again.

**High Beam Light**

When the ignition is switched ON and the headlight dimmer switch is set to HIGH BEAM, the high beam warning light will illuminate.
Daytime Running Lights (DRL) (if equipped)

When the ignition is switched ON and the daytime running lights switch is set to Daytime Running Lights, the daytime running lights warning light will illuminate.

The daytime running lights and low beam headlights are operated manually using a switch on the left hand switch housing, see page 43.

**Warning**

Do not ride for longer than necessary in poor ambient light conditions with the Daytime Running Lights (DRL) in use.

Riding with the Daytime Running Lights when dark, in tunnels or where poor ambient light is apparent may reduce the riders vision or blind other road users.

Blinding other road users or reduced vision in low ambient light levels may result in loss of motorcycle control and an accident.

**Note**

During daylight hours the Daytime Running Lights (DRL) improve the motorcycles visibility to other road users.

Low beam headlights must be used in any other conditions unless the road conditions allow for high beam headlights to be used.

---

Low Fuel Warning Light

The low fuel indicator will illuminate when there are approximately 1.19 gallon (4.5 liters) of fuel remaining in the tank.

---

Tire Pressure Warning Light (if equipped with TPMS)

**Warning**

Stop the motorcycle if the tire pressure warning light illuminates.

Do not ride the motorcycle until the tires have been checked and the tire pressures are at their recommended pressure when cold.

**Note**

The Tire Pressure Monitoring System (TPMS) is available as an accessory option on all models.

The tire pressure warning light works with the Tire Pressure Monitoring System (TPMS) see page 100.

The warning light will only illuminate when the front or rear tire pressure is below the recommended pressure. It will not illuminate if the tire is over inflated.
General Information

When the warning light is illuminated, the TPMS symbol indicating which is the deflated tire and its pressure will automatically be shown in the display area.

The tire pressure at which the warning light illuminates is temperature compensated to 68°F (20°C) but the numeric pressure display associated with it is not (see page 169). Even if the numeric display seems at or close to the standard tire pressure when the warning light is on, a low tire pressure is indicated and a puncture is the most likely cause.

Warning and Information Messages

It is possible for multiple warning and information messages to be shown when a fault occurs. Where this is the case, warning messages will take priority over information messages and the warning symbol will be shown on the display. The number of currently active warning messages is shown in the information tray.

The following Warning and Information messages may be shown if a fault is detected on the motorcycle.

<table>
<thead>
<tr>
<th>Message</th>
<th>Indicator</th>
</tr>
</thead>
<tbody>
<tr>
<td>LOW OIL PRESSURE - CHECK MANUAL</td>
<td>(red indicator)</td>
</tr>
<tr>
<td>CHECK ENGINE</td>
<td>(amber indicator)</td>
</tr>
<tr>
<td>ABS SYSTEM DISABLED - CHECK MANUAL</td>
<td>(amber indicator)</td>
</tr>
<tr>
<td>BATTERY LOW - CHECK MANUAL</td>
<td>(red indicator)</td>
</tr>
<tr>
<td>SENSOR SIGNAL FRONT/REAR TIRE - CHECK MANUAL</td>
<td>(red indicator)</td>
</tr>
<tr>
<td>BATTERY LOW FRONT/REAR TIRE - CHECK MANUAL</td>
<td>(amber indicator)</td>
</tr>
<tr>
<td>TC-SYSTEM DISABLED - CHECK MANUAL</td>
<td>(amber indicator)</td>
</tr>
<tr>
<td>SERVICE OVERDUE - CONTACT DEALER</td>
<td>(amber indicator)</td>
</tr>
<tr>
<td>BULB FAULT LEFT/RIGHT FRONT/REAR TURN SIGNAL - CHECK MANUAL</td>
<td>(amber indicator)</td>
</tr>
<tr>
<td>CAUTION: LOW AIR TEMPERATURE - RISK OF SURFACE ICE</td>
<td></td>
</tr>
</tbody>
</table>

If more than one message is displayed then the down arrow becomes active, push the joystick down to show other messages.
Press the joystick center to acknowledge and hide each message.

**Tire Pressure Low Warning Shown**

Push the joystick left or right to review the warnings previously acknowledged. Previously acknowledged warnings will be shown until they have been rectified. When a warning or information message is activated, the message will be accompanied by the relevant warning or information symbol in the instrument panel.

**Odometer and Speedometer**

The odometer shows the total distance that the motorcycle has traveled. The speedometer indicates the road speed of the motorcycle.

**Tachometer**

Never allow engine speed to enter the red zone as severe engine damage may result.
General Information

The tachometer shows the engine speed in revolutions per minute - rpm (r/min). At the end of the tachometer range there is the red zone. Engine speeds in the red zone are above maximum recommended engine speed and are also above the range for best performance.

With the ignition switched on, a black line indicates the fuel remaining in the fuel tank.

When the fuel tank is full, a black line is shown and when empty, a gray line is shown. Other gage markings indicate intermediate fuel levels between full and empty.

The low fuel warning light will illuminate when approximately 1.19 gallon (4.5 liters) of fuel is remaining in the tank and you should refuel at the earliest opportunity. The range to empty and instantaneous fuel consumption will be also shown in the Information tray. Press the joystick center to acknowledge and hide the low fuel warning.

After refueling, the fuel gage and range to empty information will be updated only while riding the motorcycle. Depending on the riding style, updating could take up to five minutes.

Fuel Gage

The fuel gage indicates the amount of fuel in the tank.

Fuel gage colors described below may vary by different styles.

Coolant Temperature Gage

The coolant temperature gage indicates the temperature of the engine coolant.
When the engine is started from cold the display will show gray bars. As the temperature increases more bars in the display will be shown illuminated. When the engine is started from hot the display will show the relevant number of illuminated bars, dependent on engine temperature.

The normal temperature range is between the C (Cold) and H (Hot) on the display.

With the engine running, if the engine coolant temperature becomes dangerously high, the high coolant temperature warning light on the display will be illuminated and the gage will display in the information tray.

**Caution**

Stop the engine immediately if the high coolant temperature warning light illuminates. Do not restart the engine until the fault has been rectified.

Severe engine damage will result from running the engine when the high coolant temperature warning light is illuminated.

### Ambient Air Temperature

The ambient air temperature is displayed as either °C or °F.

When the motorcycle is stationary the heat of the engine may affect the accuracy of the ambient temperature display.

Once the motorcycle starts moving the display will return to normal after a short time.

![Display with numbers and symbols]

1. **Ambient air temperature**

To change the temperature from °C or °F, see page 59.

### Frost Symbol

**Warning**

Black ice (sometimes called clear ice) can form at temperatures several degrees above freezing, 32°F (0°C), especially on bridges and in shaded areas.

Always take extra care when the temperatures are low and reduce speed in potentially hazardous driving conditions such as bad weather.

Excess speed, hard acceleration, heavy braking or hard cornering when roads are slippery may result in loss of motorcycle control and an accident.

The frost symbol will illuminate if the ambient air temperature is 39°F (4°C) or lower.
General Information

The frost symbol will remain illuminated until the temperature rises to 42°F (6°C). A message will also be shown in the information tray.

Gear Position Display

The gear position display indicates which gear (one to six) has been engaged. When the transmission is in neutral (no gear selected), the display will show N.

1. Gear position display (neutral position displayed)

Display Styles

There are four different display styles to select from. Style 03 is used for visual recognition and consistency throughout this owner’s handbook.

To select a style, see page 68 for more information.
**Display Navigation**

The table below describes the instrument icons and buttons used to navigate through the instrument menus described in this handbook.

<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>🏡</td>
<td>Home button (right hand switch housing).</td>

</tr>
</tbody>
</table>

**Riding Modes**

The riding modes allow adjustment of the throttle response (MAP), Anti-lock Brake System (ABS) and Traction Control (TC) settings to suit differing road conditions and rider preferences.

Riding modes can be conveniently selected using the MODE button located on the left hand switch housing, while the motorcycle is stationary or moving, see page 50.

Five riding modes are available. If the rider edits a riding mode (other than the RIDER mode), the icon will change as shown in the table below.

<table>
<thead>
<tr>
<th>Default Icon</th>

</tr>
</tbody>
</table>

Each riding mode is adjustable, see page 53 for more information.
General Information

Riding Mode Selection

⚠️ Warning

The selection of riding modes while the motorcycle is in motion requires the rider to allow the motorcycle to coast (motorcycle moving, engine running, throttle closed and no brakes applied) for a brief period of time.

Riding mode selection while the motorcycle is in motion should only be attempted:
- At low speed
- In traffic free areas
- On straight and level roads or surfaces
- In good road and weather conditions
- Where it is safe to allow the motorcycle to briefly coast.

Riding mode selection while the motorcycle is in motion MUST NOT be attempted:
- At high speeds
- While riding in traffic
- During cornering or on winding roads or surfaces
- On steeply inclined roads or surfaces
- In poor road/weather conditions
- Where it is unsafe to allow the motorcycle to coast.

Failure to observe this important warning will lead to loss of motorcycle control and an accident.

⚠️ Warning

If Traction Control (TC) has been disabled in the Main Menu as described on page 55 then all TC settings that were saved for all riding modes will be overridden.

TC will remain off regardless of the riding mode selection, until it has been re-enabled or the ignition has been switched off then on again.

If the traction control is disabled, the motorcycle will handle as normal but without traction control. In this situation accelerating too hard on wet/slippy road surfaces may cause the rear wheel to slip, and may result in loss of motorcycle control and an accident.

⚠️ Warning

After selecting a riding mode, operate the motorcycle in an area free from traffic to gain familiarity with the new settings.

Do not loan your motorcycle to anyone as they may change the riding mode settings from the one you are familiar with, causing loss of motorcycle control and an accident.
Note

The riding mode will default to ROAD when the ignition is switched ON, if the TRACK or RIDER Mode was active the last time the ignition was switched OFF with TC set to TRACK or OFF in the required mode.

Otherwise, the last selected riding mode will be remembered and activated when the ignition is switched ON.

If the mode icons are not shown when the ignition switch is in the ON position, make sure that the engine stop switch is in the RUN position.

To select a riding mode:

- Press and release the MODE button on the left hand switch housing to activate the riding mode selection tray.
- The currently active riding mode icon is shown in the right hand side of the display.

To change the selected riding mode:

- Press the joystick left or right, or repeatedly press the MODE button until the required riding mode is highlighted in the center of the riding mode information tray.
- A brief press of the joystick center will select the required riding mode, and the riding mode icon in the right hand side of the display will change.
- The selected mode is activated once the following conditions for switching modes have been met:

Motorcycle Stationary - Engine Off

- The ignition is switched ON.
- The engine stop switch is in the RUN position.

Motorcycle Stationary - Engine Running

- Neutral gear is selected or the clutch is pulled in.

Motorcycle in Motion

Within 30 seconds of selecting a riding mode the rider must carry out the following simultaneously:

- Close the throttle.
- Make sure that the brakes are not engaged (allow the motorcycle to coast).

Note

It is not possible to select TRACK or RIDER modes while the motorcycle is in motion, if the TC settings are set to TRACK or OFF in either of those modes.

In this case, the motorcycle must be brought to a stop before the riding mode change can take place.
General Information

If a riding mode change is not completed, the riding mode icon will alternate between the previous riding mode and the newly selected riding mode until the change is complete or it is canceled.

The riding mode selection is now complete and normal riding can be resumed.

Main Menu

To access the Main menu:

• The motorcycle must be stationary with the ignition switched on.
• Press the HOME button on the right handlebar switch housing.
• Scroll the Main menu by pushing the joystick down/up until the required option is selected and then press the joystick center to confirm.

Main Menu Screen

The Main menu allows access to the following options:

Riding Modes

This menu allows configuration of the riding modes. For more information, see page 53.

Bike Set Up

This menu allows configuration of the different features of the motorcycle. For more information, see page 53.

Trip Set Up

This menu allows configuration of Trip 1 and Trip 2. For more information, see page 55.

Display Set Up

This menu allows configuration of the display options. For more information, see page 57.

Lap Timer

This menu allows configuration of the lap timer and the viewing of lap timer data. For more information, see page 61.

Reset to Defaults

This menu allows all instrument settings to be returned to the default setting. For more information, see page 63.

Riding Modes

To access the Riding Modes menu:

• From the MAIN MENU, push the joystick down and select RIDING MODES.
• Press the joystick center to confirm.

• Scroll down/up using the joystick to select the required riding mode. Press the joystick center to confirm.
General Information

- The relevant setting options for the selected riding mode are now shown.

To change a setting, scroll down/up using the joystick until the required setting option is highlighted and press the joystick center to select.

Riding Mode Configuration

Refer to the following table for the ABS, MAP and TC options available for each riding mode.

Key

- ☒ Standard (factory default setting)
- ☐ Selectable option
- ☐ Option not available

Bike Set Up Menu

The Bike Set Up menu allows configuration of the different features of the motorcycle.
General Information

To access the Bike Set Up menu:

- From the MAIN MENU, push the joystick down and select BIKE SET UP.
- Press the joystick center to confirm.

To enable/disable TSA:

- From the Bike Set Up menu, push the joystick down to select TSA (SHIFT ASSIST) and press the joystick to confirm.
- Push the joystick down/up to scroll between ENABLED and DISABLED.
- Press the joystick center to confirm the required selection.
- The display will then return to the Bike Set Up menu.

For more information on Triumph Shift Assist (TSA), see page 116.

Bike Set Up - TSA (Shift Assist) (if equipped)

Triumph Shift Assist (TSA) triggers a momentary engine torque change to allow gears to engage, without closure of the throttle or operation of the clutch. This feature works for both up-shifts and down-shifts of gear.

The clutch must be used for stopping and pulling away.

TSA will not operate if the clutch is applied or if an up-shift is attempted by mistake when in 6th gear.

It is necessary to use a positive pedal force to make sure there is a smooth gear shift.

Bike Set Up - Turn Signals

The turn signals can be set to Auto Basic, Auto Advanced or Manual mode.

Selecting a Turn Signals Mode

To select the required turn signals mode:

- From the Bike Set Up menu, push the joystick down to select TURN SIGNALS and press the joystick center to confirm.
General Information

- Push the joystick down/up to scroll between AUTO BASIC, AUTO ADVANCED and MANUAL.
  - Auto Basic - The self-canceling function is on. The turn signals will activate for eight seconds and an additional 71 yards (65 meters).
  - Auto Advanced - The self-canceling function is on. A short press activates the turn signals for three flashes. A longer press activates the turn signals for eight seconds and an additional 71 yards (65 meters).
  - Manual - The self-canceling function is off. The turn signals must be manually canceled using the turn signal switch.
- Press the joystick center to confirm the required selection.
- The display will then return to the Bike Set Up menu.

Bike Set Up - Traction Control (TC)
The Traction Control (TC) system can be temporarily disabled. The Traction Control (TC) system cannot be permanently disabled, it will be automatically enabled when the ignition is turned off and then on again.

To disable or enable the TC system:
- From the BIKE SET UP menu, press the joystick center to select TC.

Bike Set Up - Service
The service interval is set to a distance and/or time period.

To review the service interval:
- From the BIKE SET UP menu, push the joystick down to select SERVICE.
- Press the joystick center to display the SERVICE information.

Trip Set Up
This menu allows the configuration of the trip meters.

To access the Trip Set Up menu:
- From the MAIN MENU, push the joystick down and select TRIP SET UP.
General Information

- Press the joystick center to confirm.

Selecting TRIP 1 RESET or TRIP 2 RESET allows the relevant trip meter to be configured manually or automatically. The set up procedure is the same for both trip meters.

Manual reset will only reset the selected trip meter when the rider chooses to do so. For more information, see page 56.

Automatic reset will reset each trip meter after the ignition has been switched off for a set time. For more information, see page 56.

Trip meter 2 can be enabled or disabled. For more information, see page 57.

Trip Set Up - Manual Reset

To set the trip computer to reset manually:
- From the TRIP SETUP menu, push the joystick down and then press the joystick center to select TRIP 1 RESET or TRIP 2 RESET.

Trip Set Up - Automatic Reset

To set the trip computer to automatically reset:
- From the TRIP SETUP menu, push the joystick down/up and then press the joystick center to select TRIP 1 RESET or TRIP 2 RESET.
- Push the joystick down/up to select AUTOMATIC and then press the joystick center to confirm.
- Using the joystick down/up, choose the timer setting and press the joystick center to confirm the required time limit.
- The required time limit is then stored in the trip memory. A tick is shown to indicate the selected option.

There are two options:
- RESET NOW AND CONTINUE - Resets all trip meter data in the relevant trip meter.
- CONTINUE WITHOUT RESET - Any trip meter data in the relevant trip meter will not be reset.
General Information

- When the ignition is turned off, the trip meter is set to zero when the time period has elapsed.

<table>
<thead>
<tr>
<th>Ignition Turned Off</th>
<th>Selected Time Delay</th>
<th>Trip Meter Resets to Zero</th>
</tr>
</thead>
<tbody>
<tr>
<td>10:30 hrs</td>
<td>4 HRS</td>
<td>14:30 hrs</td>
</tr>
<tr>
<td>18:00 hrs</td>
<td>16 HRS</td>
<td>10:00 hrs (next day)</td>

The following table shows two examples of the automatic trip reset functionality.

Trip 2 Enable/Disable

Trip 2 meter can be enabled or disabled. If trip 2 meter is disabled, it will no longer be shown in the information tray.

To enable or disable the Trip 2 meter:
- From the TRIP SET UP menu, push the joystick down/up to scroll to the TRIP 2 DISPLAY. Press the joystick center to confirm.

Display Set Up Menu

The Display Set Up menu allows configuration of the different display screen options.

To access the Display Set Up menu:
- From the MAIN MENU, push the joystick down and select DISPLAY SET UP. Press the joystick center to confirm.
- Select the required option from the list to access the relevant information.

Display Set Up - Color

To select a different color for the display information:
- From the DISPLAY SET UP menu, push the joystick down/up to select COLOR.
General Information

- Press the joystick center to confirm.

Push the joystick down/up to scroll between the four different colored icons. There are four color options available; blue, green, yellow and white.
- Press the joystick center to select the required color.
- The new color is then applied to the instrument display for all styles. Press the HOME button to exit.

Display Set Up - Brightness
There are two brightness options to select from:
- High contrast - day time mode
- Low contrast - night time mode

To adjust the brightness:
- From the DISPLAY SET UP menu, push the joystick down to select BRIGHTNESS (HIGH CONTRAST) or BRIGHTNESS (LOW CONTRAST) menu.
- Press the joystick center to select the required menu.

Brightness (High Contrast) Shown
- Push the joystick left/right to adjust the brightness.
- Press the joystick center to confirm the required level of brightness.
- Press the HOME button to return to the main display.

Note
In bright sunlight, low brightness settings will be overridden to make sure that the instruments can be viewed at all times.

Display Set Up - Visible Tray
The Visible Tray menu allows the selection of the items to be shown in the information tray.

To select the Visible Tray menu:
- From the DISPLAY SET UP menu, push the joystick down to select the VISIBLE TRAY option.
General Information

• Press the joystick center to show the available options.
• Scroll the menu by moving the joystick down/up until the required option is highlighted.
• Press the joystick center to select/deselect the information trays.

An information tray item with a tick next to it will be shown in the tray. An information tray item without a tick next to it will not be shown in the tray.

Display Set Up - Language

The Language menu allows the preferred language to be used as the instrument display language.

To select the required language for the instrument display:
• From the DISPLAY SET UP menu, push the joystick down to select the LANGUAGES option.
• Press the joystick center to confirm and display the available language options.
• Scroll the menu by pushing the joystick down/up until the required language option is highlighted.
• Press the joystick center to select/deselect the correct LANGUAGE. A tick is shown to indicate the selected option.

- Press the joystick center to confirm the language option.

Display Set Up - Units

The Units menu allows the selection of a preferred unit of measurement.

To select the required units of measurement:
• From the DISPLAY SET UP menu, push the joystick down and select UNITS.
• Press the joystick center to confirm.

To change the unit of measurement:
• Push the joystick down/up to highlight the required option (DISTANCE/ECONOMY, TEMPERATURE or PRESSURE).
• Press the joystick center to select. A tick is shown to indicate the selected option.
• Push the joystick down/up to select the required unit of measurement.
• Press the joystick center to confirm. A tick is shown to indicate the selected option.

The options available are:
Economy:
• Miles & MPG (UK)
• Miles & MPG (US)
• KM & L/100KM
• KM & KM/L
General Information

Temperature:
- °C
- °F

Pressure:
- PSI
- bar
- KPa

Display Set Up - Clock

The Clock menu allows the adjustment of the clock to be set to the local time.

To set the clock:
- From the Display Set Up menu, push the joystick down to select CLOCK and press the joystick center to confirm.
- Push the joystick down/up to select between either 12 Hr or 24 Hr clock and press the joystick center to confirm selection. A tick is shown to indicate the selected option.

The clock will display in either 12 or 24 hour format. Once the clock format is set, the display will return to the CLOCK menu.

To set the time, push the joystick down/up to select HOURS or MINUTES.

To adjust the hour setting:
- Select HOURS on the display and press the joystick center. A tick will appear next to HOURS and the hour display will flash as shown below.
- Push the joystick down/up to set the hour. Press the joystick center to confirm.

To adjust the minute setting:
- Select MINUTES on the display and press the joystick center. A tick will appear next to MINUTES and the minute display will flash as shown below.
- Push the joystick down/up to set the minute. Press the joystick center to confirm.

Display Set Up - Date

This function allows the date and date format to be adjusted.

To set the date and date format:
- From the DISPLAY SET UP menu, push the joystick down to select DATE and press the joystick center to confirm.
General Information

- Push the joystick down/up to select DATE FORMAT. Press the joystick center to confirm.

![DATE FORMAT]

- Push the joystick down/up to select either of the date format options and press the joystick center to confirm selection. A tick is shown to indicate the selected option.

- Once the date format is set the display will return to the DATE menu.

![DATE FORMAT]

To set the date:
- From the DISPLAY SET UP menu, push the joystick down to select DATE and press the joystick center to confirm.
- Push the joystick down/up to select YEAR and press the joystick center to confirm. The YEAR display will flash.
- Push the joystick down/up to set the current year and then press the joystick center to confirm.
- To set the MONTH and DAY repeat the procedure used to set the year.

Lap Timer
To set the lap timer option, the motorcycle must be stationary with the ignition turned to the ON position.

- Push the HOME button to show the MAIN MENU.
- Push the joystick down and then press joystick center to select LAP TIMER.

![LAP TIMER]

The options available are:
- START SESSION
- REVIEW (Review is available only if lap timer data is stored).

Lap Timer - Start Session
This function allows the lap timer options to be set.

![START SESSION]

There are two options available:
- AUTO LAP DISTANCE - The motorcycle odometer is used to calculate the lap distance and average speed. The lap distance is accurate to +/-54 yards (50 meters).
General Information

- **FIXED LAP DISTANCE** - Allows the exact lap distance in yards or meters to be set. The lap timer uses the set distance to calculate a more accurate average speed, compared to Auto Lap Distance.

**AUTO LAP DISTANCE**

To set the auto lap distance:
- Push the joystick down/up to select AUTO LAP DISTANCE and press the joystick center to start the lap timer session.

**FIXED LAP DISTANCE**

To set the fixed lap distance:
- Push the joystick down/up to select FIXED LAP DISTANCE and press the joystick center. The UNITS and SET DISTANCE menus will be shown.

**UNITS**

- Press the joystick center to confirm the selection.

To start the lap timer, see page 69.

**Lap Timer - Review**

This function allows the rider to review any stored sessions, see page 61.

To select the LAP TIMER - REVIEW menu the motorcycle must be stationary with the ignition turned to the ON position.
- Push the HOME button to show the MAIN MENU.
- Push joystick down and then press joystick center to select LAP TIMER.
- Push joystick down to select the REVIEW menu.

- Push joystick center to display the stored sessions.
- Scroll the menu by moving the joystick up/down until the required session is highlighted.
• Press joystick center to select the required session and review the stored lap times using joystick up/down.

Sessions are stored in time and date order.

Note

The lap timer will store up to five sessions and up to 24 laps per session. Once this limit is reached, earlier sessions will be overwritten.

Reset to Defaults

The Reset to Default option allows the Main Menu display items to be reset to the default setting.

To reset the Main Menu display items:
• From the Main Menu, push the joystick down and select RESET TO DEFAULTS.

• Push the joystick down/up to select CONFIRM or CANCEL. Press the joystick center to confirm the selection.

• Confirm - The following main menu settings and data will be reset to the factory default values - Riding Modes, Indicator Set Up, Trip Computers, Visible Trays, Language, Traction Control, Style, Display Brightness, Lap Timer settings and data.

• Cancel - The main menu settings and data will remain unchanged and the display will return to the previous menu level.

Information Tray

⚠️ Warning

When the motorcycle is in motion, only attempt to switch between the information tray modes or reset the fuel information under the following conditions:
- At low speed
- In traffic free areas
- On straight and level roads or surfaces
- In good road and weather conditions.

Failure to observe this important warning could lead to loss of motorcycle control and an accident.

Note

To access the information tray, the warning messages must first be acknowledged, see page 64.
General Information

The information tray appears in the top section of the display screen for styles 01, 02 and 03. It appears on the left hand side of the display screen for style 04. It allows easy access to different motorcycle status information.

To view the different information tray items, push the joystick left/right until the required information tray item is shown.

The information tray contains the following information tray items:

• Warnings and Information Messages, see page 64
• Trip Meter, see page 65
• Fuel Consumption, see page 65
• Tire Pressure Monitoring System (TPMS) (if equipped), see page 100
• Service Interval, see page 66
• Color, see page 67
• Screen Contrast, see page 67
• Brightness, see page 68
• Style Select, see page 68
• Lap Timer, see page 69.

Different information tray items can be shown or hidden from the information tray. For further information, refer to page 58.

Warning Review

Any warnings and information messages are shown in the Warnings tray. An example is shown below.

![Image of a warning message].

To view the warnings:

• Push the joystick down/up to scroll through the options until the warning review is shown.

• Push the joystick left/right to review each warning (if more than one). The warning counter will show the amount of warnings that are present.

• Push the joystick down/up to return to the information tray.

Low Battery Warning

If items such as heated grips are mounted and are on with the engine at idle, over a period of time, the battery voltage may drop below a predetermined voltage and a warning message will be shown in the Warnings tray.
**General Information**

**Trip Meter**
There are two trip meters that can be accessed and reset in the information tray.

1. Distance traveled
2. Average speed
3. Duration of trip

To view a specific trip meter:
- Push the joystick left/right to scroll through the information tray items until Trip 1 meter is shown.
- Select TRIP 1 or TRIP 2 by pushing the joystick down/up.

**Note**
TRIP 2 meter can be shown or hidden from the information tray. For more information, see page 57.

To reset a trip meter:
- Select the trip meter to be reset.
- Press and hold the joystick center for more than one second.
- The trip meter will then be reset.

The trip meter can also be reset from the Main menu, see page 56.

**Fuel Consumption**
The Fuel Consumption information tray shows fuel consumption information.

1. Fuel gage
2. Current fuel consumption
3. Average fuel consumption
4. Range to empty

**Current Fuel Consumption**
This is an indication of the fuel consumption at an instant in time. If the motorcycle is stationary, --.-- will be shown in the display area.

**Average Fuel Consumption**
This is an indication of the average fuel consumption. After being reset the display will show dashes until 0.1 miles/km has been covered.

**Range to Empty**
This is an indication of the predicted distance that can be traveled on the remaining fuel in the tank.

**Reset**
To reset the average fuel consumption, press and hold the joystick center.
General Information

Note
After refueling, the fuel gauge and range to empty information will be updated only while riding the motorcycle. Depending on the riding style, updating could take up to five minutes.

Tire Pressure Monitoring System (TPMS) (if equipped)

⚠️ Warning
Stop the motorcycle if the tire pressure warning light illuminates. Do not ride the motorcycle until the tires have been checked and the tire pressures are at their recommended pressure when cold.

The Tire Pressure Monitoring System (TPMS) information tray shows the front and rear tire pressures.

1. Rear tire pressure indicator
2. Tire pressure warning light
3. Low front tire pressure warning shown
4. Front tire pressure indicator

Tire Pressure Warning Light

The tire pressure warning light will only illuminate when the front or rear tire pressure is below the recommended pressure. It will not illuminate if the tire is over inflated.

Front Tire Pressure Indicator
This shows the current front tire pressure.

Rear Tire Pressure Indicator
This shows the current rear tire pressure.

Low Tire Pressure
The front or rear tire will be highlighted on the motorcycle image to indicate that the tire pressure is below the recommended pressure.

For more information on TPMS and tire pressures, see page 100.

Service
The Service information tray shows the distance and days remaining before the next service is recommended.

1. Service information
Color

The Color information tray allows a different color to be applied to the current style. There are four color options available: blue, green, yellow and white.

To apply a different color to the current style:

- Push the joystick left/right to select the required color.
- Press the joystick center to confirm the required color.
- The new color is then applied to the current style.
- To apply a color to all styles, see page 57.

Screen Contrast

The Contrast information tray allows the display screen contrast to be adjusted.

There are three options available:

1. High contrast option
2. Auto contrast option
3. Low contrast option

To select an option:

- Push the joystick left/right to select the HIGH, AUTO or LOW contrast option and press the joystick center to confirm.
General Information

- If the rider defined brightness setting is suitable this will be used, see page 58.

Note
Do not cover the light sensor on the display screen as this will stop the screen brightness and contrast from working correctly.

Brightness
The Brightness information tray allows the brightness of the display screen to be adjusted.

To adjust the brightness of the display screen:
- Push the joystick left/right to increase/decrease the level of brightness.
- Press the joystick center to confirm the required level of brightness.

Note
In bright sunlight, low brightness settings will be overridden to make sure that the instruments can be viewed at all times.

Note
Do not cover the light sensor on the display screen as this will stop the screen brightness and contrast from working correctly.

Style Select
The Style Select information tray allows a different style to be applied to the display screen.

Style Select Information Tray (Style 03 Selected)

To change the display screen style:
- Push the joystick left/right to select the required style and then press the joystick center to confirm.
Lap Timer
The Lap Timer information tray allows a certain distance/lap to be timed and compared against a previously timed lap.

1. Average speed
2. Last lap time
3. This lap time
4. Number of lap

To start a lap:
- Briefly press the joystick down/up or center. The lap counter will start to count the first lap. This is shown as THIS LAP.
- Pressing the joystick down/up or center will start a new lap, and the previous lap’s time and average speed will be shown in the information tray as LAST LAP next to the new lap time.
- A long press (longer than two seconds) of the joystick down/up or center will stop the lap timer, clear the stored data and start a new lap time.
- The stored lap timer data is viewable from the Main Menu. For more information, see page 62.

Instrument Panel Position Adjustment

⚠️ Warning
Operation of the motorcycle with an incorrectly adjusted instrument panel is dangerous.

An incorrectly adjusted instrument panel will result in loss of instrument vision when riding and may cause a distraction leading to loss of control of the motorcycle and an accident.

Always adjust the instrument panel to provide sufficient vision of the instruments before riding the motorcycle.

⚠️ Warning
Never attempt to clean or adjust the instrument panel while riding the motorcycle. Removal of the rider’s hands from the handlebar while riding the motorcycle will diminish the ability of the rider to maintain control of the motorcycle.

Attempting to clean or adjust the instrument panel while riding the motorcycle may result in loss of control of the motorcycle and an accident.

Only attempt to clean or adjust the instrument panel while stationary.
General Information

**Caution**

Do not press directly onto the instrument panel display screen.

Only adjust the position of the instrument panel using the adjustment lever.

Pressing directly on the instrument panel display screen may damage the instrument panel.

The instrument panel can be adjusted to allow for improved visibility of the display screen.

To adjust the instrument panel:

**Note**

Moderate force using the thumb and finger is required to adjust the position of the instrument panel.

Position the instrument panel to allow an unobstructed view of the display screen using the adjustment handle.

27. SCROLL Button
Warning Lights

Engine Management System
Malfunction Indicator Light (MIL)

The Malfunction Indicator Light (MIL) for the engine management system illuminates when the ignition is switched ON (to indicate that it is working) but should not become illuminated when the engine is running.

If the engine is running and there is a fault with the engine management system the MIL will be illuminated and the general warning symbol will flash. In such circumstances, the engine management system may switch to ‘limp-home’ mode so that the journey may be completed, if the fault is not so severe that the engine will not run.

⚠️ Warning
Reduce speed and do not continue to ride for longer than is necessary with the MIL illuminated. The fault may adversely affect engine performance, exhaust emissions and fuel consumption.

Reduced engine performance could cause a dangerous riding condition, leading to loss of control and an accident.

Contact an authorized Triumph dealer as soon as possible to have the fault checked and rectified.

Note
If the MIL flashes when the ignition is switched ON contact an authorized Triumph dealer as soon as possible to have the situation rectified. In these circumstances the engine will not start.

Low Oil Pressure Warning Light

With the engine running, if the engine oil pressure becomes dangerously low, the low oil pressure warning light will illuminate.

⚠️ Caution
Stop the engine immediately if the low oil pressure warning light illuminates. Do not restart the engine until the fault has been rectified.

Severe engine damage will result from running the engine when the low oil pressure warning light is illuminated.

Note
The low oil pressure warning light will illuminate if the ignition is switched ON without running the engine.

High Coolant Temperature Warning Light

With the engine running, if the engine coolant temperature becomes dangerously high, the high coolant temperature warning light will illuminate.
General Information

⚠️ Caution

Stop the engine immediately if the high coolant temperature warning light illuminates. Do not restart the engine until the fault has been rectified. Severe engine damage will result from running the engine when the high coolant temperature warning light is illuminated.

Engine Immobilizer / Alarm Indicator Light

This Triumph motorcycle is equipped with an engine immobilizer which is activated when the ignition switch is turned to the OFF position.

Not Equipped With Alarm

When the ignition switch is turned to the OFF position, the engine immobilizer/alarm light will flash on and off for 24 hours to show that the engine immobilizer is on. When the ignition switch is turned to the ON position the engine immobilizer and the indicator light will be off.

If the indicator light remains on it indicates that the engine immobilizer has a malfunction that requires investigation. Contact an authorized Triumph dealer as soon as possible to have the fault checked and rectified.

Equipped With Alarm

The engine immobilizer/alarm light will only illuminate when the conditions described in the genuine Triumph accessory alarm instructions are met.

Anti-lock Braking System (ABS) Warning Light

When the ignition switch is turned to the ON position, it is normal that the ABS warning light will flash on and off. The light will continue to flash after engine start-up until the motorcycle first reaches a speed exceeding 6 mph (10 km/h) when it will go off.

Note

Traction control will not function if there is a malfunction with the ABS. The warning lights for the ABS, traction control and the MIL will be illuminated.

The warning light should not illuminate again until the engine is restarted unless there is a fault.

If the warning light becomes illuminated at any time while riding it indicates that the ABS has a malfunction that requires investigation.

⚠️ Warning

If the ABS is not functioning, the brake system will continue to function as a non-ABS equipped brake system. Do not continue to ride for longer than is necessary with the warning light illuminated.

Contact an authorized Triumph dealer as soon as possible to have the fault checked and rectified. In this situation braking too hard will cause the wheels to lock resulting in loss of motorcycle control and an accident.
Traction Control (TC) Indicator Light

The Traction Control (TC) indicator light is used to indicate that the traction control system is active and is working to limit rear wheel slip during periods of hard acceleration or under wet or slippery road conditions.

**Warning**

If the traction control is not functioning, care must be taken when accelerating and cornering on wet/slippery road surfaces to avoid rear wheel spin.

Do not continue to ride for longer than is necessary with the engine management system Malfunction Indicator Light (MIL) and traction control warning lights illuminated. Contact an authorized Triumph dealer as soon as possible to have the fault checked.

Hard acceleration and cornering in this situation may cause the rear wheel to spin resulting in loss of motorcycle control and an accident.

If traction control is switched on:
- Under normal riding conditions the TC indicator light will remain off.
- The TC indicator light will flash rapidly when the traction control system is working to limit rear wheel slip during periods of hard acceleration or under wet or slippery road conditions.

If traction control is switched off:
- The TC indicator light will not illuminate. Instead the TC disabled warning light will be illuminated.

**Note**

Traction control will not function if there is a malfunction with the ABS system. The warning lights for the ABS, traction control and the MIL will be illuminated.

Traction Control (TC) Disabled Warning Light

The TC disabled warning light should not illuminate unless traction control is switched off or there is a malfunction.

If the warning light becomes illuminated at any other time while riding, it indicates that the traction control system has a malfunction that requires investigation.

Turn Signals

When the turn signal switch is turned to the left or right, the indicator warning light will flash on and off at the same speed as the turn signals.

Hazard Warning Lights

To turn the hazard warning lights on or off, press and release the hazard warning light switch.

The ignition must be switched ON for the hazard warning lights to function.

The hazard warning lights will remain on if the ignition is switched to the PARK position, until the hazard warning light switch is pressed again.
General Information

High Beam Light

When the ignition is switched ON and the headlight dimmer switch is set to HIGH BEAM, the high beam warning light will illuminate.

Low Fuel Warning Light

The low fuel indicator will illuminate when there are approximately 1.19 gallon (4.5 liters) of fuel remaining in the tank.

Neutral

The neutral warning light indicates when the transmission is in neutral (no gear selected). The warning light will illuminate when the transmission is in neutral with the ignition switch in the ON position.

Tire Pressure Warning Light

⚠️ Warning

Stop the motorcycle if the tire pressure warning light illuminates. Do not ride the motorcycle until the tires have been checked and the tire pressures are at their recommended pressure when cold.

Note

TPMS is available as an accessory option on all models.

The tire pressure warning light works in conjunction with the Tire Pressure Monitoring System (TPMS) see page 100.

The warning light will only illuminate when the front or rear tire pressure is below the recommended pressure. It will not illuminate if the tire is over inflated.

When the warning light is illuminated, the TPMS symbol indicating which is the deflated tire and its pressure will automatically be shown in the display area.

The tire pressure at which the warning light illuminates is temperature compensated to 68°F (20°C) but the numeric pressure display associated with it is not (see page 168). Even if the numeric display seems at or close to the standard tire pressure when the warning light is on, a low tire pressure is indicated and a puncture is the most likely cause.
General Information

Speedometer and Odometer
The speedometer indicates the road speed of the motorcycle.
The odometer shows the total distance that the motorcycle has travelled.

Tachometer

⚠️ Caution
Never allow engine speed to enter the red zone as severe engine damage may result.

The tachometer shows the engine speed in revolutions per minute - rpm (r/min). At the end of the tachometer range there is the red zone.
Engine speeds in the red zone are above maximum recommended engine speed and are also above the range for best performance.

Gear Position Display
The gear position display indicates which gear (one to six) has been engaged. When the transmission is in neutral (no gear selected), the display will show N.

1. Gear position display (neutral position displayed)

1. Gear position display (first gear displayed)
**General Information**

**Coolant Temperature Gage**
The coolant temperature gage indicates the temperature of the engine coolant.

1. **Coolant temperature gage**

When the ignition is switched on, all eight bars of the display will be shown. When the engine is started from cold the display will show one bar. As the temperature increases more bars in the display will be shown. When the engine is started from hot the display will show the relevant number of bars, dependent on engine temperature.

The normal temperature range is between three and five bars.

If the coolant temperature becomes too high the display will show eight bars and will start to flash. The high coolant temperature light in the tachometer will also be illuminated.

**Caution**

Do not continue to run the engine if either of the high temperature warnings are displayed as severe engine damage may result.

**Fuel Gage**
The fuel gage indicates the amount of fuel in the tank.

1. **Fuel gage**
2. **SET Button**

With the ignition switched on, the number of bars shown in the display indicates the level of fuel.

When the fuel tank is full all eight bars are displayed and when empty, no bars are displayed. Other gage markings indicate intermediate fuel levels between full and empty.

When two bars are displayed the low fuel warning light will illuminate. This indicates there are approximately 1.19 gallon (4.5 liters) of fuel remaining in the tank and you should refuel at the earliest opportunity. If a trip meter display is shown, the range to empty display can be selected by pressing and releasing the SET button until it is shown.

After refueling, the fuel gage and range to empty information will be updated only while riding the motorcycle. Depending on the riding style, updating could take up to five minutes.
Instrument SCROLL/SET Buttons

SCROLL Button
When the SCROLL button is pressed and released it will scroll through the menu shown in the instrument display screen.

The SCROLL button is used to operate the following functions of the instruments:

- Set Up (SEtUP)
  - Traction Control (ttc), see page 79
  - Clock Adjustment (t-SEt), see page 80
  - Auto – Self-canceling Turn Signals (Ind), see page 80
  - Service Interval Announcement (SIA), see page 81
  - Gear Shift Lights (SHIFt), see page 82
  - Units (UnitS), see page 83.
- Return (REtURn)

SET Button
When the SET button is pressed it will select the menu shown in the instrument display screen.

Traction Control (TC) Disable

⚠️ Warning
If the traction control is disabled, the motorcycle will handle as normal but without traction control. In this situation accelerating too hard on wet/slippery road surfaces may cause the rear wheel to slip, and may result in loss of motorcycle control and an accident.

It is possible to temporarily disable the Traction Control (TC) system. The TC system cannot be permanently disabled, it will be automatically enabled when the ignition is turned off and then on again.

To Disable Traction Control

To access the traction control disable function:

- Press and release the SCROLL button until SEtUP is shown in the display screen then press the SET button.
- The display screen will show ttc.
- Press the set button and ON or OFF will be shown.
- Press and release the scroll button until OFF is shown in the display screen.
- Pressing the set button will disable the TC system; the message TTC OFF will be shown for 2 seconds, and the TC warning light will be illuminated.
To Enable Traction Control
To enable the traction control system again:
- Repeat the traction control disable procedure and select ON.
- An alternative way to enable the TC is to turn the ignition off and on.

Clock

⚠️ Warning
Do not attempt to adjust the clock with the motorcycle in motion as this may lead to loss of motorcycle control and an accident.

1. Hours
2. Minutes
3. Display screen (Hour selected for adjustment)
4. SET button
5. SCROLL button

Adjusting the Clock - t-SEt
To set the clock time format:
- Press and release the SCROLL button until SETUP is shown in the display screen. Press the SET button until t-SEt is shown.
- Press the SET button again and either 24 Hr or 12 Hr clock format will be shown.
- Press the SCROLL button to select the required clock display and then press the SET button. The hour display will start to flash and the word Hour is shown in the display screen.

To set the hour and minute display:
- Make sure that the hour display is still flashing and the word Hour is shown.
- Press the SCROLL button to change the setting. Each individual button press will change the setting by one digit. If the button is held, the display will continuously scroll through in single digit increments.
- When the correct hour display is shown, press the SET button. The minutes display will begin to flash and the word Min is shown in the display screen. The minutes display is adjusted in the same way as for the hours.
- Once both hours and minutes are correctly set, press the SET button to confirm and t-SEt will be shown in the display screen.
- Press and release the SCROLL button until RETURn is shown then press the SET button.

Auto – Self-canceling Turn Signals – Ind (Street Triple R only)
The motorcycle has a self-canceling turn signal function that can be disabled or enabled.
To disable or enable the self-canceling function:

- Press and release the SCROLL button until SETUP is shown in the display screen. Press the SET button until ttc is shown.
- Press and release the SCROLL button until Ind is shown in the display screen.
- Press and release the SET button and Auto or MANUAL will flash on and off.
- Press and release the SCROLL button to select Auto or MANUAL then press the SET button.
  - Auto – The self-canceling function is on (see page 36).
  - MANUAL – The self-canceling function is off. The turn signals must be manually canceled (see page 36).

1. Display screen (Auto selected)

To exit the Auto – Self-canceling Turn Signals menu:

- Press and release the SCROLL button until the display shows RETURN.

- Press the SELECT button. The trip 1 menu will be shown in the display screen.

**Service Interval Announcement (SIA)**

The Service Interval Announcement (SIA) shows the total distance that the motorcycle has remaining before a service is required.

1. Service symbol
2. Remaining distance

When the remaining distance is 0 miles, the service symbol will remain on until the service has been carried out and the system has been reset by your authorized Triumph dealer.

If the service is overdue, the distance will be shown as a negative number.

When the ignition is switched on and the distance to the next service is 500 miles (800 km) or less, the service symbol will be shown for three seconds and the clock will show the distance remaining before the next service.
General Information

Gear Shift Lights

Note
The gear shift lights will not operate below 3,500 rpm to avoid the lights operating at idle.

1. Gear shift lights
2. Display screen (6 mode shown)
3. SCROLL Button
4. SET Button

Changing the Gear Shift Light Modes
To change the gear shift light modes:

• Press and release the SCROLL button until the required gear shift light mode is shown then press the SET button. The display will scroll through in the following order:
  - 6 (6 LED mode);
  - 3 (3 LED mode);
  - SE (Sequential mode);
  - OFF (Gear shift lights off).

Note
The motorcycle is delivered from the factory with the gear shift light set to the 6 LED mode at 3,500 rpm.

When the gear shift light mode has been selected, the tachometer needle will move round to the current set position. The rpm will be shown in the display screen with the current set units flashing.
Changing the Set Engine Speed
To change the engine speed setting:
• Press the scroll button. Each individual press of the SCROLL button will increase the setting in increments of 500 rpm, up to the maximum rpm limit. When the maximum rpm limit is reached, the setting will return to 3,500 rpm.
• When the correct setting is shown, press the SET button to confirm the setting. SHIFt will be shown in the display screen and all the gear shift lights will flash.
• Press and release the SCROLL button until RETURn is shown in the display screen then press the SET button.

Setting the Gear Shift Lights to Off

1. Gear shift lights
2. Display screen (OFF mode shown)
3. SCROLL Button
4. SET Button

To turn the gear shift lights to OFF:
• Press and release the SELECT button until OFF is shown then press the SET button.
• Press the SET button and SHIFt will be shown in the display screen.

UnitS (Imperial, US or Metric)
Units has four selectable display modes.
Each display provides the following information:

mpg (Imperial gallons)
The speedometer and odometer will read in miles. The fuel consumption will be measured in imperial gallons.

mpg US (US gallons)
The speedometer and odometer will read in miles. The fuel consumption will be measured in US gallons.

L/100 km (Metric)
The speedometer and odometer will read in kilometers. The fuel consumption will be measured in liters of fuel per 100 km.

km/L (Metric)
The speedometer and odometer will read in kilometers. The fuel consumption will be measured in kilometers per liter of fuel.
Changing the Units Display

**Warning**

Do not attempt to change the units display with the motorcycle in motion as this may lead to loss of motorcycle control and an accident.

1. Scroll button
2. SET button
3. Display screen

To access the units display:

- Press and release the SCROLL button until SETUP is shown in the display screen then press the SET button.
- Press and release the SCROLL button until UnitS is shown then press the SET button.

- Press and release the SCROLL button until the required display is shown. The display will scroll through in the following order when pressing down on the SCROLL button (it will scroll through in the reverse order when pressing up on the SCROLL button):
  - mpg – Imperial gallons
  - mpg US – US gallons
  - L/100 km – Metric
  - km/L – Metric.

**Tire Pressure Units - only if TPMS is equipped**

1. TPMS symbol
2. Front tire indicator
3. Rear tire indicator
4. Tire pressure display
5. Scroll button
6. Set button

To access the tire pressure display:

- Press and release the SCROLL button until SETUP is shown in the display screen.
- Press and release the SET button.
- Press and release the SCROLL button until UnitS is shown in the display screen.
• Press and release the SET button to select the pressure display.
• Press and release the SCROLL button to scroll between BAR or PSI.
• Press and release the SET button to select either BAR or PSI.
• When the tire pressure monitoring system has been selected, —— PSI or bAR will be shown in the display screen until the motorcycle is traveling at a speed greater than 12 mph (20 km) and the tire pressure signal is received.

To exit the tire pressure display:
• Press and release the SCROLL button until RETURn is shown.
• Press and release the SET button to return to the TRIP screen

Return
Select RETURn to return to the main display.

---

**Trip Meter**

**Warning**

Do not attempt to switch between trip meter display modes or reset the trip meter with the motorcycle in motion as this may lead to loss of motorcycle control and an accident.

---

1. **Trip meter display**

To access the trip meter information press and release the TRIP button on the left handlebar switch housing until the required display is shown.
General Information

The display will scroll through in the following order:

- Trip time
- Average fuel consumption
- Instantaneous fuel consumption
- Average speed
- Odometer
- Front Tire Pressure Display (if TPMS is equipped)
- Rear Tire Pressure Display (if TPMS is equipped)
- Trip distance
- Range to empty.

Each display provides the following information all calculated since the trip meter was last reset to zero:

**Trip Time**
The total time elapsed.

**Average Fuel Consumption**
An indication of the average fuel consumption. After being reset the display will show dashes until 0.1 miles/km has been covered.

**Instantaneous Fuel Consumption**
An indication of the fuel consumption at an instant in time.

**Average Speed**
The average speed is calculated from when the trip computer was last reset. After being reset the display will show dashes until 1 mile/km has been covered.

**Odometer**
The odometer shows the total distance that the motorcycle has traveled.

**Front Tire Pressure Display**
Displays the current front tire pressure.

**Rear Tire Pressure Display**
Displays the current rear tire pressure.

**Trip Distance**
The total trip distance traveled.

**Range to Empty**
This is an indication of the predicted distance that can be traveled on the remaining fuel in the tank.

**Trip Meter Reset**
To reset the trip meter, select and display the trip meter then press the TRIP button for one second. After one second, the trip meter will reset to zero.

**Note**
When the trip meter is reset to zero, the trip time, average fuel consumption and average speed will also be set to zero.

**Riding Mode Selection**

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>After selecting a riding mode, operate the motorcycle in an area free from traffic to gain familiarity with the new settings. Do not loan your motorcycle to anyone as they may change the riding mode settings from the one you are familiar with, causing loss of motorcycle control and an accident.</td>
</tr>
</tbody>
</table>

Riding modes may be selected when the motorcycle is stationary or moving.

When the MODE button is pressed, the riding modes are displayed in the following sequence:

- RAIN Mode
- ROAD Mode
- SPORT Mode
• RIDER Mode.

There is a one second delay after pressing the MODE button between each of the modes to allow for further scrolling to take place.

The selected mode is automatically activated once the one second delay has elapsed, and the conditions for switching modes have been met.

The last selected riding mode will be remembered and activated when the ignition is switched ON.

RAIN Mode

The RAIN mode is predetermined and provides optimal ABS, MAP and TC settings for normal road use in rain conditions.

<table>
<thead>
<tr>
<th>System Settings</th>
<th>Map Settings</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>ABS</strong></td>
<td>Road – Optimal ABS setting for road use.</td>
</tr>
<tr>
<td><strong>MAP</strong></td>
<td>Rain – Reduced throttle response when compared to the Road setting, for wet or slippery conditions.</td>
</tr>
<tr>
<td><strong>TC</strong></td>
<td>Rain – Optimal TC setting for road use in rain conditions, allows minimal rear wheel slip.</td>
</tr>
</tbody>
</table>

ROAD Mode

The ROAD mode is predetermined and provides optimal ABS, MAP and TC settings for normal road use.

<table>
<thead>
<tr>
<th>System Settings</th>
<th>Map Settings</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>ABS</strong></td>
<td>Road – Optimal ABS setting for road use.</td>
</tr>
<tr>
<td><strong>MAP</strong></td>
<td>Road – Standard throttle response.</td>
</tr>
<tr>
<td><strong>TC</strong></td>
<td>Road – Optimal TC setting for road use.</td>
</tr>
</tbody>
</table>

SPORT Mode (Street Triple R only)

The SPORT mode provides optimal MAP, ABS and TTC settings for normal sport use.

<table>
<thead>
<tr>
<th>System Settings</th>
<th>Map Settings</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>ABS</strong></td>
<td>Road – Optimal ABS setting for road use.</td>
</tr>
<tr>
<td><strong>MAP</strong></td>
<td>Sport – Increased throttle response when compared to the Road setting.</td>
</tr>
<tr>
<td><strong>TC</strong></td>
<td>Sport – Allows increased rear wheel slip when compared with the Road setting.</td>
</tr>
</tbody>
</table>
General Information

RIDER Mode (Street Triple R only)

⚠️ Warning

The TRACK ABS and TTC options are not intended for normal, on-road riding.

Riding on-road with the TRACK ABS and TTC options activated can produce instability when braking if the ABS cuts in and under acceleration if the TTC intervenes, leading to loss of motorcycle control and an accident.

The RIDER mode is fully adjustable and allows the rider to select MAP, ABS and TTC options to suit road conditions or personal preferences.

The MAP, ABS and TC options available for selection are as follows:

<table>
<thead>
<tr>
<th>MAP Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rain</td>
</tr>
<tr>
<td>Road</td>
</tr>
<tr>
<td>Sport</td>
</tr>
<tr>
<td>Track</td>
</tr>
</tbody>
</table>

<table>

<tr>
<td><strong>Sport</strong></td>
<td>TC is set up for road use, allowing increased rear wheel slip when compared to the Road setting.</td>
</tr>
<tr>
<td><strong>Track</strong></td>
<td>TC is set up for track use, allowing increased rear wheel slip when compared to the Sport setting.</td>
</tr>
<tr>
<td><strong>Off</strong></td>
<td>TC is turned off. The TC disabled warning light will be illuminated (see page 75).</td>
</tr>
</tbody>
</table>

For details on setting the RIDER Mode options, see page 89.

### Setting the RIDER Mode Options

**Note**

During setup, TC can be activated or deactivated in the RIDER mode.

If the RIDER mode is currently selected, changes to the MAP, ABS and TC systems will become immediately active.

If the ROAD or TRACK modes are selected the RIDER settings will not become active until the RIDER mode is selected (see page 86).

To set the RIDER mode options: with the motorcycle stationary and in neutral, turn the ignition to the ON position.

- Press and hold the MODE button until MAP is shown in the display screen.
- or alternatively:
  - Press and release the SCROLL button until SETUP is shown in the display screen. Press the SET button to confirm.
  - Press and release the SCROLL button until RIDER is shown in the lower instrument display, then press the SET button to confirm.

![Rider Shown](image)
MAP Options

- Press the SCROLL button and choose one of the available MAP options:
  - Rain
  - Road
  - Sport.

Rain Option Shown

- Press the SET button to confirm the selection.
- ABS is now shown in the display screen.

ABS Options

- Press the SCROLL button and choose one of the available ABS options:
  - Road
  - Track.

Road Option Shown

- Press the SET button to confirm the selection.
- TC is now shown in the display screen.
**TC Options**

- Press the SCROLL button and choose one of the available TC options:
  - Rain
  - Road
  - Track
  - Off.

**Warning**

If the traction control is disabled, the motorcycle will handle as normal but without traction control. In this situation accelerating too hard on wet/slippery road surfaces may cause the rear wheel to slip, and may result in loss of motorcycle control and an accident.

- Press the SET button to confirm the selection.

**RIdER Shown**

- Press the SET button and the RIdER is now shown in the display.

**REtURn Shown**

- Press the SET button and the REtURn screen is shown.

- Press the SET button to confirm.
General Information

• The trip screen and the current riding mode is shown.
• The selected riding mode is automatically activated one second after the MODE button is pressed, if the following conditions are met:
  
  **With the Engine Off**
  • The ignition is switched ON.
  • The engine stop switch is in the RUN position.
  
  **With the Engine Running**
  • Neutral gear is selected or the clutch is pulled in.

---

**Current Riding Mode**

• To select a riding mode, see page 86.

**Selecting a Riding Mode – Motorcycle Stationary**

To select a riding mode when the motorcycle is stationary:

• Press and release the MODE button on the left handlebar switch housing until the required riding mode is flashing in the display.

---

1. Selected riding mode (flashing)
2. Current (active) riding mode

• Once the ABS, MAP and TTC settings have changed, the selected riding mode will be shown and the previous mode will no longer be shown.
Selecting a Riding Mode – Motorcycle Moving

⚠️ Warning

The selection of riding modes while the motorcycle is in motion requires the rider to allow the motorcycle to coast (motorcycle moving, engine running, throttle closed and no brakes applied) for a brief period of time.

Riding mode selection while the motorcycle is in motion should only be attempted:
- At low speed
- In traffic free areas
- On straight and level roads or surfaces
- In good road and weather conditions
- Where it is safe to allow the motorcycle to briefly coast.

Riding mode selection while the motorcycle is in motion MUST NOT be attempted:
- At high speeds
- While riding in traffic
- During cornering or on winding roads or surfaces
- On steeply inclined roads or surfaces
- In poor road/weather conditions
- Where it is unsafe to allow the motorcycle to coast.

Failure to observe this important warning will lead to loss of motorcycle control and an accident.

To select a riding mode when the motorcycle is moving:
- Press and release the MODE button on the left handlebar switch housing until the required riding mode is flashing in the display.

1. Selected riding mode (flashing)
2. Current (active) riding mode

- The selected riding mode is automatically activated if within 30 seconds of pressing the MODE button the following has been carried out simultaneously:
  - Throttle closed.
  - Brakes not applied (allow the motorcycle to coast).

1. Selected riding mode
Once the ABS, MAP and TTC settings have changed, the selected riding mode will be shown and the previous mode will no longer be shown.

Resume riding as normal.

If any one of the systems (ABS, MAP and TTC) fails to change to the settings specified by the selected riding mode, both the previous and the selected riding mode icons will flash.

1. Incomplete mode change (flashing)

The flashing of two riding mode icons together indicates that ABS, MAP and TTC settings specified by the selected riding mode have not been correctly selected. In this case the ABS, MIL or TTC warning light(s) may be illuminated depending on the current state of each system.

In the event of an incomplete riding mode change:

- Safely bring the motorcycle to a stop.
- Select Neutral.
- Turn the ignition OFF and then back ON again.
- Select the required riding mode.
- Restart the engine and continue riding.

**Warning**

Do not stop the engine using the ignition switch or engine stop switch while the motorcycle is moving. Always bring the motorcycle to a stop safely and engage Neutral gear prior to stopping the engine.

Stopping the engine by turning off the ignition or engine stop switch while the motorcycle is moving can lock the rear wheel causing loss of motorcycle control and an accident.

**Caution**

The engine should normally be stopped by turning the ignition switch to the OFF position.

The engine stop switch is for emergency use only.

Do not leave the ignition switched on with the engine stopped. Electrical damage may result.
Caution

The engine should not be stopped by turning the ignition switch to the OFF position when the motorcycle is moving. The engine stop switch is for emergency use only.

Stopping the engine when the motorcycle is moving may cause damage to motorcycle components.

Note

If the mode icons are not shown when the ignition switch is in the ON position, make sure that the engine stop switch is in the RUN position.

Fuel

Unleaded fuel only
Carburant san plomb
Gasolina sin plomo
Bleffries Benzin
Endast blyfri bensin
Benzina senza piombo
Ongelode Brandstof
Combustival sem schumbo

RON/ROZ 95 min. 91

Fuel Grade

Triumph motorcycles are designed to run on unleaded gasoline with a CLC or AKI octane rating \((R+M)/2\) of 87 or higher. Federal regulations require that pumps delivering unleaded gasoline are marked ‘UNLEADED’ and that the Cost of Living Council (CLC) or Anti-Knock Index (AKI) octane rating is also displayed. These ratings are an average of the Research Octane Number (RON) and the Motor Octane Number (MON).

Ethanol

In Europe, Triumph motorcycles are compatible with Ethanol E5 and E10 (5% and 10% Ethanol) unleaded fuel.

In all other markets Ethanol up to E25 (25% Ethanol) may be used.

Engine Calibration

In certain circumstances engine calibration may be required. Always refer to your authorized Triumph dealer.
General Information

**Caution**
The motorcycle can be permanently damaged if it is allowed to operate with the incorrect grade of fuel or incorrect engine calibration.
Always make sure the fuel used is of the correct grade and quality.
Damage caused by using the incorrect fuel or engine calibration is not considered a manufacturing defect and will not be covered under warranty.

**Caution**
The exhaust system for this motorcycle is equipped with a catalytic converter to help reduce exhaust emission levels.
Use of leaded fuel will damage the catalytic converter. In addition, the catalytic converter can be permanently damaged if the motorcycle is allowed to run out of fuel or if the fuel level is allowed to get very low.
Always make sure you have adequate fuel for your trip.

**Note**
The use of leaded fuel is illegal in some countries, states or territories.

**Note**
If 'knocking' or 'pinging' occurs at a steady engine speed under normal load, use a different brand of gasoline or gasoline which has a higher octane rating.

**Oxygenated Gasoline**
To help in meeting clean air standards, some areas of the U.S. use oxygenated gasoline to help reduce harmful emissions. These gasolines are a blend of conventional gasoline and another compound such as alcohol. This Triumph motorcycle will give its best performance when using unleaded gasoline. However, the following should be used as a guide if you use any oxygenated fuels.

**Ethanol**
Ethanol fuel is a mixture of 10% Ethanol and 90% gasoline and is often described under the names 'gasohol', 'Ethanol enhanced', or 'contains Ethanol'. This fuel may be used in your Triumph motorcycle.

**MTBE (Methyl Tertiary Butyl Ether)**
The use of gasolines containing up to 15% MTBE (Methyl Tertiary Butyl Ether) is permitted in this Triumph motorcycle.

**Methanol**
Fuels containing methanol should not be used as damage to components in the fuel system can be caused by contact with methanol.

**Note**
Because of the generally higher volatility of oxygenated fuels, starting, engine response and fuel consumption may be adversely affected by their use. Should any of these difficulties be experienced, run the motorcycle on normal unleaded gasoline.
Refueling

⚠️ Warning

To help reduce hazards associated with refueling, always observe the following fuel safety instructions:
- Gasoline (fuel) is highly flammable and can be explosive under certain conditions. When refueling, turn the ignition switch to the OFF position.
- Do not smoke.
- Do not use a mobile telephone.
- Make sure the refueling area is well ventilated and free from any source of flame or sparks. This includes any appliance with a pilot light.
- Never fill the tank until the fuel level rises into the filler neck. Heat from sunlight or other sources may cause the fuel to expand and overflow creating a fire hazard.
- After refueling always check that the fuel filler cap is correctly closed.
- Because gasoline (fuel) is highly flammable, any fuel leak or spillage, or any failure to observe the safety advice given above will lead to a fire hazard, which could cause damage to property, injury to persons or death.

Fuel Tank Cap

1. Fuel tank cap
2. Key

To open the fuel tank cap, lift up the flap covering the lock. Insert the key into the lock and turn the key clockwise.

To close and lock the cap, push the cap down into place with the key inserted, until the lock clicks into place. Withdraw the key and close the key cover.

⚠️ Caution

Closing the cap without the key inserted will damage the cap, tank and lock mechanism.
Filling the Fuel Tank

**Warning**

Overfilling the tank can lead to fuel spillage.

If fuel is spilled, thoroughly clean up the spillage immediately and dispose of the materials used safely.

Take care not to spill any fuel on the engine, exhaust pipes, tires or any other part of the motorcycle.

Because fuel is highly flammable, any fuel leak or spillage, or any failure to observe the safety advice given above may lead to a fire hazard, which could cause damage to property and injury or death to persons.

Fuel spilled near to, or onto the tires will reduce the tires’ ability to grip the road. This will result in a dangerous riding condition potentially causing loss of motorcycle control and an accident.

**Caution**

Avoid filling the tank in rainy or dusty conditions where airborne material can contaminate the fuel.

Contaminated fuel may cause damage to fuel system components.

Fill the fuel tank slowly to help prevent spillage. Do not fill the tank to a level above the bottom of the filler neck. This will make sure there is enough air space to allow for fuel expansion if the fuel inside the tank expands through absorption of heat from the engine or from direct sunlight.

After refueling always check that the fuel filler cap is correctly closed.
### Traction Control (TC)

**Warning**

Traction control is not a substitute for riding appropriately for the prevailing road and weather conditions.

The traction control cannot prevent loss of traction due to:
- Excessive speed when entering turns
- Accelerating at a sharp lean angle
- Braking
- Traction control cannot prevent the front wheel from slipping.

Failure to observe any of the above may result in loss of motorcycle control and an accident.

Traction control helps to maintain traction when accelerating on wet/slippery road surfaces. If sensors detect that the rear wheel is losing traction (slipping), the traction control system will engage and alter the engine power until traction to the rear wheel has been restored. The traction control warning light will flash while it is engaged and the rider may notice a change to the sound of the engine.

**Note**

Traction control will not function if there is a malfunction with the ABS system. The warning lights for the ABS, traction control and the MIL will be illuminated.

### Traction Control Settings

**Warning**

Do not attempt to adjust the traction control settings while the motorcycle is in motion as this may lead to loss of motorcycle control and an accident.

If the traction control is disabled, the motorcycle will handle as normal but without traction control. In this situation accelerating too hard on wet/slippery road surfaces may cause the rear wheel to slip, and may result in loss of motorcycle control and an accident.

The traction control can be set as described on page 49 for Street Triple RS models, or on page 79 for all other models.

If traction control is turned OFF, the TC disabled warning light will be illuminated (see page 44 or page 75.

The traction control defaults to ON after the ignition has been switched OFF and then switched ON again.
General Information

Tire Pressure Monitoring System (TPMS) (if equipped)

Note
The Tire Pressure Monitoring System (TPMS) is available as an accessory option on all models and must be installed by your authorized Triumph dealer. The TPMS display on the instruments will only be activated when the system has been installed.

Warning
The daily check of tire pressures must not be excluded because of the installation of the Tire Pressure Monitoring System (TPMS).
Check the tire pressure when the tires are cold using an accurate tire pressure gage, see the Tire section for more information.
Use of the TPMS system to set inflation pressures may lead to incorrect tire pressures leading to loss of motorcycle control and an accident.

Tire pressure sensors are mounted to the front and rear wheels. These sensors measure the air pressure inside the tire and transmit pressure data to the instruments. These sensors will not transmit the data until the motorcycle is traveling at a speed greater than 12 mph (20 km/h). Two dashes will be shown in the display area until the tire pressure signal is received.

An adhesive label will be mounted to the wheel rim to indicate the position of the tire pressure sensor, which is near the valve.

Tire Pressure Warning Light
(if equipped with TPMS)

Warning
Stop the motorcycle if the tire pressure warning light illuminates.
Do not ride the motorcycle until the tires have been checked and the tire pressures are at their recommended pressure when cold.

The tire pressure warning light works in conjunction with the Tire Pressure Monitoring System, see page 100.
The warning light will only illuminate when the front or rear tire pressure is below the recommended pressure. It will not illuminate if the tire is over inflated.
When the warning light is illuminated, the Tire Pressure display will show which tire is the deflated tire. It will also show the tire pressure.

The tire pressure at which the warning light illuminates is temperature compensated to 68°F (20°C) but the numeric pressure display associated with it is not (see page 168). Even if the numeric display seems at or close to the standard tire pressure when the warning light is on, a low tire pressure is indicated and a puncture is the most likely cause.

**Tire Pressure Sensor Serial Number**

The serial number for the tire pressure sensor is printed on a label attached to the sensor. This number may be required by your authorized Triumph dealer for service or diagnostics.

When the tire pressure monitoring system is being installed to the motorcycle, make sure that your authorized Triumph dealer records the serial numbers of the front and rear tire pressure sensors in the spaces provided below.

**Front Tire Pressure Sensor**

**Rear Tire Pressure Sensor**

1. Rear tire pressure indicator
2. TPMS warning light
3. Low front tire pressure warning shown
4. Front tire pressure indicator

1. TPMS symbol
2. Front tire indicator
3. Rear tire indicator
4. Tire pressure warning light
5. Tire pressure
Warning

The Tire Pressure Monitoring System (TPMS) is not to be used as a tire pressure gage when adjusting the tire pressures.

For correct tire pressures, always check the tire pressures when the tires are cold using an accurate tire pressure gage.

Use of the TPMS system to set inflation pressures may lead to incorrect tire pressures leading to loss of motorcycle control and an accident.

Caution

Do not use anti puncture fluid or any other item likely to obstruct air flow to the TPMS sensor’s orifices. Any blockage to the air pressure orifice of the TPMS sensor during operation will cause the sensor to become blocked, causing irreparable damage to the TPMS sensor assembly.

Damage caused by the use of anti puncture fluid or incorrect maintenance is not considered a manufacturing defect and will not be covered under warranty.

Always have your tires mounted by your authorized Triumph dealer and inform them that tire pressure sensors are installed on the wheels.

The tire pressures shown on the instrument panel indicate the actual tire pressure at the time of selecting the display. This may differ from the inflation pressure set when the tires are cold because tires become warmer during riding, causing the air in the tire to expand and the pressure to increase. The cold inflation pressures specified by Triumph take account of this.

Only adjust tire pressures when the tires are cold using an accurate tire pressure gage (see page 169), and do not use the tire pressure display on the instruments.

Replacement Tires

When replacing tires, always have an authorized Triumph dealer fit your tires and make sure they are aware that tire pressure sensors are fitted to the wheels.

Sensor Batteries

When the battery voltage in a pressure sensor is low, a message will be shown in the instrument display and the TPMS symbol or message will indicate which wheel sensor has the low battery voltage. If the batteries are completely flat, only dashes will be shown in the instrument display, the red TPMS warning light will be on and the TPMS symbol will flash continuously. Contact your authorized Triumph dealer to have the sensor replaced and the new serial number recorded in the spaces provided on page 101.
With the ignition switch turned to the ON position, if the TPMS symbol flashes continuously or the TPMS warning light remains on there is a fault with the TPMS system. Contact your authorized Triumph dealer to have the fault rectified.

### Side Stand

**Warning**

The motorcycle is equipped with an interlock system to prevent it from being ridden with the side stand in the down position.

Never attempt to ride with the side stand down or interfere with the interlock mechanism as this will cause a dangerous riding condition leading to loss of motorcycle control and an accident.

**Warning**

Do not lean, sit or climb on the motorcycle when it is supported on the side stand.

This may cause the motorcycle to fall over leading to motorcycle damage and an accident.

1. **Side stand**

The motorcycle is equipped with a side stand on which the motorcycle can be parked.
General Information

When using the side stand, always turn the handlebars fully to the left and leave the motorcycle in first gear.
Whenever the side stand is used, before riding, always make sure that the side stand is fully up after first sitting on the motorcycle.
For instructions on safe parking, refer to the How to Ride the Motorcycle section.

Seats

Seat Care

Caution

To prevent damage to the seat or seat cover, care must be taken not to drop the seat. Do not lean the seat against the motorcycle or any surface which may damage the seat or seat cover. Instead, place the seat, with the seat cover facing upwards, on a clean, flat surface which is covered with a soft cloth.
Do not place any item on the seat which may cause damage or staining to the seat cover.

See page 188 for seat cleaning information.

Rider’s Seat

1. Rider’s seat fastener

To remove the rider’s seat:
- Remove the passenger seat or seat cowl (see page 105).
• Remove the fastener located to the rear of the padding. This will allow the rider’s seat to slide up and rearwards for complete removal from the motorcycle.

To re-install the seat:
• Engage the seat’s tongue under the fuel tank.
• Install and tighten the fastener to 80 lbf in (9 Nm).
• Re-install the passenger seat or seat cowl (see page 105).

**Warning**
The rider’s seat is only correctly retained and supported once the fastener is correctly tightened.

Never ride the motorcycle with the fastener loose or removed, as the rider’s seat will not be secure and may move.
A loose or detached seat may cause loss of motorcycle control and an accident.

**Passenger Seat and Seat Cowl**

**Note**
The section applies to both the passenger seat and the seat cowl. The seat cowl is installed to certain models only, or is available as an accessory.

The passenger seat lock is located on the left hand side of the rear bodywork, in line with the footrest mounting rail.

**Warning**

Never ride the motorcycle with the passenger seat detached or removed.
To prevent detachment of the seat during riding, after installation always grasp the seat and pull firmly upwards. If the seat is not correctly secured, it will detach from the lock.
A loose or detached seat could cause loss of motorcycle control and an accident.
Reinstall
To re-install the passenger seat:
• Engage the seat’s tongue under the bracket.
• Align the locating peg to the lock and press down engaging the seat lock. An audible click can be heard when the seat is fully engaged in its lock.

1. Locating peg
2. Lock
3. Bracket
4. Tongue

Owner’s Handbook and Tool Kit
Owner’s Handbook
The Owner’s Handbook is located under the passenger seat.

Tool Kit
The tool kit is located on the underside of the passenger seat.

Street Triple S (40.2 cu in (660 cc))
The tool kit includes a:
• Screwdriver
• Rear suspension unit spring preload adjustment tool (not stored in tool kit)
• Extension handle (not stored in tool kit)
• 0.16 in (4 mm) Allen key
• 0.2 in (5 mm) Allen key.

Street Triple R - LRH
The tool kit includes a:
• Screwdriver
• Rear suspension unit spring preload adjustment tool (not stored in tool kit)
• Extension handle (not stored in tool kit)
• 0.16 in (4 mm) Allen key
• 0.2 in (5 mm) Allen key
• Front fork adjuster tool

Street Triple R
The tool kit includes a:
• Screwdriver
• 0.16 in (4 mm) Allen key
• 0.2 in (5 mm) Allen key
• Front fork adjuster tool.
Street Triple RS
The tool kit includes a:
• Screwdriver
• 0.12 in (3 mm) Allen key
• 0.16 in (4 mm) Allen key
• 0.2 in (5 mm) Allen key
• Front fork adjuster tool.

Universal Serial Bus (USB) Socket

⚠️ **Warning**
The USB socket is not waterproof unless the waterproof cap is installed. Do not connect electronic devices while it is raining.
Water in the USB socket could lead to an electrical problem, resulting in motorcycle damage, loss of motorcycle control and an accident.

⚠️ **Caution**
Do not leave the ignition switch in the ON position unless the engine is running as this will discharge the battery.
General Information

**Caution**

Make sure that all electronic devices and cables are safely secured under the seat when riding.

Make sure there is sufficient space surrounding any electronic devices for the seat to close without causing any damage to the electronic device or the motorcycle.

---

**USB Port Socket**

The Universal Serial Bus (USB) socket allows a 5 Volt USB connection for charging electronic devices such as mobile phones, cameras and GPS devices. Loads up to a maximum of two Amps can be connected to the USB socket.

To access the USB socket:

- Remove the passenger seat or seat cowl, see page 105.

---

- The USB socket is located on the right hand side, adjacent to the seat lock.

---

**Note**

Adapter cables are not supplied with the motorcycle.
Breaking-In

Breaking-in is the name given to the process that occurs during the first hours of a new vehicle’s operation.

In particular, internal friction in the engine will be higher when components are new. Later on, when continued operation of the engine has ensured that the components have ‘bedded in’, this internal friction will be greatly reduced.

A period of careful breaking-in will ensure lower exhaust emissions, and will optimize performance, fuel economy and longevity of the engine and other motorcycle components.

During the first 500 miles (800 km):
- Do not use full throttle;
- Avoid high engine speeds at all times;
- Avoid riding at one constant engine speed, whether fast or slow, for a long period of time;
- Avoid aggressive starts, stops, and rapid accelerations, except in an emergency;
- Do not ride at speeds greater than 3/4 of maximum speed.

From 500 to 1,000 miles (800 to 1,500 km):
- Engine speed can gradually be increased to the rev limit for short periods.

Both during and after breaking-in has been completed:
- Do not overrev the engine when cold;
- Do not lug the engine. Always downshift before the engine begins to ‘struggle’;
- Do not ride with engine speeds unnecessarily high. Shifting up a gear helps reduce fuel consumption, reduces noise and helps to protect the environment.
General Information

Daily Safety Checks

Failure to perform these checks every day before you ride may result in serious motorcycle damage or an accident causing serious injury or death.

Check the following items each day before you ride. The time required is minimal, and these checks will help ensure a safe, reliable ride.

If any irregularities are found during these checks, refer to the Maintenance and Adjustment section or see your authorized Triumph dealer for the action required to return the motorcycle to a safe operating condition.

Check the following:

**Fuel:** Adequate supply in tank, no fuel leaks (page 95).

**Engine Oil:** Correct level on dipstick. Add correct specification oil as required. No leaks from the engine or oil cooler (page 135).

**Drive Chain:** Correct adjustment (page 145).

**Tires/Wheels:** Correct inflation pressures (when cold). Tread depth/wear, tire/wheel damage, punctures etc. (page 168).

**Nuts, Bolts, Fasteners:** Visually check that steering and suspension components, axles, and all controls are properly tightened or fastened. Inspect all areas for loose/damaged fasteners.

**Steering Action:** Smooth but not loose from lock to lock. No binding of any of the control cables (page 157).

**Brakes:** Pull the brake lever and push the brake pedal to check for correct resistance. Investigate any lever/pedal where the travel is excessive before meeting resistance, or if either control feels spongy in operation (page 148).

**Front Brake Pads:** Check that the correct amount of friction material is remaining on all the brake pads (page 148).

**Brake Fluid Levels:** No brake fluid leakage. Brake fluid levels must be between the MAX and MIN marks on both reservoirs (page 152).

**Front Forks:** Smooth action. No leaks from fork seals (page 158).

**Throttle:** Make sure that the throttle grip returns to the idle position without sticking (page 26).

**Clutch:** Smooth operation and correct cable free play (page 142).

**Coolant:** No coolant leakage. Check the coolant level in the expansion tank (when the engine is cold) (page 139).

**Electrical Equipment:** All lights and the horn function correctly (page 178).

**Engine Stop:** Stop switch turns the engine off (page 112).

**Stand:** Returns to the fully up position by spring tension. Return springs not weak or damaged (page 103).

How to Ride the Motorcycle

Stopping the Engine

⚠️ Caution

The engine should normally be stopped by turning the ignition switch to the OFF position.
The engine stop switch is for emergency use only.
Do not leave the ignition switched on with the engine stopped. Electrical damage may result.

To stop the engine:
• Close the throttle completely.
• Select neutral.
• Turn the ignition switch to the OFF position.
• Select first gear.
• Support the motorcycle on a firm, level surface with the side stand.
• Lock the steering.

Starting the Engine

⚠️ Warning

Never start the engine or run the engine in a confined area.
Exhaust fumes are poisonous and can cause loss of consciousness and death within a short period of time.
Always operate the motorcycle in the open air or in an area with adequate ventilation.

1. Neutral indicator (Street Triple RS only)
2. Neutral indicator (all models except Street Triple RS)
3. OFF position on the ignition switch
4. STOP position on the engine start/stop switch
Caution

Do not operate the starter continuously for more than five seconds as the starter motor will overheat and the battery will become discharged.

Wait 15 seconds between each operation of the starter to allow for cooling and recovery of battery power.

Do not let the engine idle for long periods as this may lead to overheating which will cause damage to the engine.

Note

When the ignition is switched on, the tachometer needle will quickly sweep from zero to maximum and then return to zero (LCD instruments only). The instrument warning lights will illuminate and will then go off (except those which normally remain on until the engine starts – see page 40 for TFT instruments and page 73 for LCD instruments). It is not necessary to wait for the needle to return to zero (LCD instruments only) before starting the engine.

A transponder is installed within the key to turn off the engine immobilizer. To make sure the immobilizer functions correctly, always have only one of the ignition keys near the ignition switch. Having two ignition keys near the switch may interrupt the signal between the transponder and the engine immobilizer. In this situation the engine immobilizer will remain active until one of the ignition keys is removed.

- Leaving the throttle fully closed, push the starter button until the engine starts.
- Slowly release the clutch lever.

1. RUN position on the engine start/stop switch
2. START position on the engine start/stop switch
3. Neutral indicator (Street Triple RS only)
4. Neutral indicator (all models except Street Triple RS)
5. ON position on the ignition switch

To start the engine:

- Check that the stop switch is in the RUN position.
- Make sure the transmission is in neutral.
- Pull the clutch lever fully into the handlebar.
- Turn the ignition switch to the ON position.
How to Ride the Motorcycle

Caution
The low oil pressure warning light should go out shortly after the engine starts.
If the low oil pressure warning light stays on after starting the engine, stop the engine immediately and investigate the cause.
Running the engine with low oil pressure will cause severe engine damage.

Moving Off
To move the motorcycle:
• Pull in the clutch lever and select first gear.
• Open the throttle a little and let out the clutch lever slowly.
• As the clutch starts to engage, open the throttle a little more, allowing enough engine speed to avoid stalling.

• The motorcycle is equipped with starter lockout switches. The switches prevent the electric starter from operating when a gear in engaged with the side stand down.
• If the side stand is extended while the engine is running, and the transmission is not in neutral then the engine will stop regardless of clutch position.
Shifting Gears

⚠️ Warning

Take care to avoid opening the throttle too far or too fast in any of the lower gears as this can lead to the front wheel lifting from the ground (pulling a ‘wheelie’) and to the rear tire breaking traction (wheel spin).

Always open the throttle cautiously, particularly if you are unfamiliar with the motorcycle, as a ‘wheelie’ or loss of traction will cause loss of motorcycle control and an accident.

⚠️ Warning

Do not shift to a lower gear at speeds that will cause excessive engine rpm (r/min).

This can lock the rear wheel causing loss of control and an accident. Engine damage may also be caused.

Shifting down should be done such that low engine speeds will be ensured.

To shift gear:

- Close the throttle while pulling in the clutch lever.
- Shift into the next higher or lower gear.
- Open the throttle part way, while releasing the clutch lever.
- Always use the clutch when shifting gear.

Note

The gear shift mechanism is the ‘positive stop’ type. This means that for each movement of the gear shift pedal, you can only select each gear, one after the other, in ascending or descending order.

Note

For models equipped with Triumph Shift Assist (TSA), see page 116.
How to Ride the Motorcycle

Triumph Shift Assist (TSA) (if equipped)

Caution

In the event of a TSA system fault when riding, the TSA system will be disabled.

Use the clutch to shift gears in the normal way otherwise damage to the engine or gear box may occur.

Contact a Triumph dealer as soon as possible to have the fault checked and rectified.

Caution

Shifting gears must be completed with a quick and forceful pedal movement, making sure that the pedal moves through its full range of travel.

Always take care when shifting gears. After a gear shift, the pedal must be fully released before another gear shift can be made.

Incorrect gear shifts can cause damage to the engine and transmission.

Triumph Shift Assist (TSA) adjusts the engine torque to allow gears to engage, without closure of the throttle twist grip or operation of the clutch.

TSA is not an automatic system for shifting gears. Gears must be selected and shifted in the normal way using the gear pedal as described on page 115.

TSA works for both up shifts and down shifts of gear. The clutch must be used for stopping and pulling away. The clutch must be used when selecting any gear from neutral, and also when selecting neutral from any other gear.

Triumph Shift Assist will not operate if:
- The clutch is applied.
- An up shift is attempted by mistake when in 6th gear.
- A down shift is attempted by mistake when in 1st gear.
- An up shift is attempted at very low engine speeds.
- A down shift is attempted at very high engine speeds.
- An up shift is attempted during overrun.
- The vehicle speed limiter is active.
- Cruise control is active.
- Traction control is operating.
- If the previous gear has not fully engaged.
- The throttle is changed during a shift.

If TSA does not operate, the clutch can be used to shift gears in the normal way.

For more information on enabling and disabling the TSA functionality, see page 54.
Braking

1. Front brake lever

1. Rear brake pedal

**Warning**

When braking, observe the following:

- Close the throttle completely, leaving the clutch engaged to allow the engine to help slow down the motorcycle.

- Shift down one gear at a time such that the transmission is in first gear when the motorcycle comes to a complete stop.

- When stopping, always apply both brakes at the same time. Normally the front brake should be applied a little more than the rear.

- Shift down or fully disengage the clutch as necessary to keep the engine from stalling.

- Never lock the brakes, as this may cause loss of control of the motorcycle and an accident.

**Warning**

For emergency braking, disregard down shifting, and concentrate on applying the front and rear brakes as hard as possible without skidding. Riders should practice emergency braking in a traffic-free area. Triumph strongly recommends that all riders take a course of instruction, which includes advice on safe brake operation. Incorrect brake technique could result in loss of control and an accident.
How to Ride the Motorcycle

⚠️ Warning
For your safety, always exercise extreme caution when braking, accelerating or turning as any improper action can cause loss of control and an accident. Independent use of the front or rear brakes reduces overall braking performance. Extreme braking may cause either wheel to lock, reducing control of the motorcycle and causing an accident (see ABS warnings below).

When possible, reduce speed or brake before entering a turn as closing the throttle or braking in mid-turn may cause wheel slip leading to loss of control and an accident.

When riding in wet or rainy conditions, or on loose surfaces, the ability to maneuver and stop will be reduced. All of your actions should be smooth under these conditions. Sudden acceleration, braking or turning may cause loss of control and an accident.

⚠️ Warning
Riding with your foot on the brake pedal or your hands on the brake lever may actuate the brake light, giving a false indication to other road users. It may also overheat the brake, reducing braking effectiveness leading to loss of motorcycle control and an accident.

⚠️ Warning
Do not coast with the engine switched off, and do not tow the motorcycle. The transmission is pressure lubricated only when the engine is running. Inadequate lubrication may cause damage or seizure of the transmission, which can lead to sudden loss of motorcycle control and an accident.

⚠️ Warning
When descending a long, steep gradient or mountain pass, make use of the engine’s braking effect by downshifting and use both front and rear brakes intermittently. Continuous brake application or use of the rear brake only can overheat the brakes and reduce their effectiveness leading to loss of motorcycle control and an accident.
ABS (Anti-Lock Brake System)

| Warning |

ABS prevents the wheels from locking, therefore maximizing the effectiveness of the braking system in emergencies and when riding on slippery surfaces. The potentially shorter braking distances ABS allows under certain conditions are not a substitute for good riding practice.

Always ride within the legal speed limit. Never ride without due care and attention and always reduce speed in consideration of weather, road and traffic conditions.

Take care when cornering. If the brakes are applied in a corner, ABS will not be able to counteract the weight and momentum of the motorcycle. This can result in loss of control and an accident.

Under some circumstances it is possible that a motorcycle equipped with ABS may require a longer stopping distance.

ABS Warning Light

When the ignition switch is turned to the ON position, it is normal for the ABS warning light to flash on and off, see page 74 for Street Triple R, Street Triple R - LRH and Street Triple RS models or page 74 for Street Triple S (40.2 cu in (660 cc)) models. If the ABS warning light is constantly illuminated it indicates that the ABS function is not available because:

- The ABS has been disabled by the rider, see page 50 Street Triple R, Street Triple R - LRH and Street Triple RS models.
- The ABS has a malfunction that requires investigation.

If the indicator light becomes illuminated while riding, it indicates that the ABS has a malfunction that requires investigation.

Note

The ABS operation may feel like a harder pedal pressure or a pulsation of the brake lever and pedal.

The ABS is not an integrated braking system and does not control both the front and rear brake at the same time so this pulsation may be felt in the lever, the pedal or both.

The ABS may be activated by sudden upward or downward changes in the road surface.
How to Ride the Motorcycle

⚠️ Warning
If the ABS is not functioning, the brake system will continue to function as a non-ABS equipped brake system. In this situation, braking too hard will cause the wheels to lock resulting in loss of control and an accident. Reduce speed and do not continue to ride for longer than is necessary with the indicator light illuminated. Contact an authorized Triumph dealer as soon as possible to have the fault checked and rectified.

⚠️ Warning
The ABS warning light will illuminate when the rear wheel is driven at high speed for more than 30 seconds when the motorcycle is on a stand. This reaction is normal. When the ignition is switched off and the motorcycle is restarted, the warning light will illuminate until the motorcycle reaches a speed exceeding 19 mph (30 km/h).

⚠️ Warning
The ABS system operates by comparing the relative speed of the front and rear wheels. Use of non-recommended tires can affect wheel speed and cause the ABS function not to operate, potentially leading to loss of control and an accident in conditions where the ABS would normally function.

Parking

⚠️ Warning
The engine and exhaust system will be hot after riding. DO NOT park where pedestrians and children are likely to touch the motorcycle. Touching any part of the engine or exhaust system when hot may cause unprotected skin to become burnt.

⚠️ Warning
Gasoline is extremely flammable and can be explosive under certain conditions. If parking inside a garage or other structure, be sure it is well ventilated and the motorcycle is not close to any source of flame or sparks. This includes any appliance with a pilot light. Failure to follow the above advice may cause a fire resulting in damage to property or personal injury.
How to Ride the Motorcycle

**Warning**
Do not park on a soft or steeply inclined surface.
Parking under these conditions may cause the motorcycle to fall over causing damage to property and personal injury.

To park the motorcycle:
- Select neutral and turn the ignition switch to the OFF position.
- Select first gear.
- Lock the steering to help prevent theft.
- Always park on a firm, level surface to prevent the motorcycle from falling. This is particularly important when parking off-road.
- When parking on a hill, always park facing uphill to prevent the motorcycle from rolling off the stand. Engage first gear to prevent the motorcycle from moving.
- On a lateral (sideways) incline, always park such that the incline naturally pushes the motorcycle towards the side stand.

- Do not park on a lateral (sideways) incline of greater than 6° and never park facing downhill.
- Do not leave the switch in the P position for long periods of time as this will discharge the battery.

**Note**
When parking near traffic at night, or when parking in a location where parking lights are required by law, leave the tail, license plate and position lights on by turning the ignition switch to P (PARK).
Considerations for High Speed Operation

⚠️ Warning
This Triumph motorcycle should be operated within the legal speed limits for the particular road traveled.
Operating a motorcycle at high speeds can be potentially dangerous since the time available to react to given traffic situations is greatly reduced as road speed increases.
Always reduce speed in potentially hazardous driving conditions such as bad weather or heavy traffic.

⚠️ Warning
Only operate this Triumph motorcycle at high speed in closed-course on-road competition or on closed-course racetracks.
High speed operation should only then be attempted by riders who have been instructed in the techniques necessary for high speed riding and are familiar with the motorcycle’s characteristics in all conditions.
High speed operation in any other circumstances is dangerous and will lead to loss of motorcycle control and an accident.

⚠️ Warning
The handling characteristics of a motorcycle at high speed may vary from those you are familiar with at legal road speeds.
Do not attempt high speed operation unless you have received sufficient training and have the required skills as a serious accident may result from incorrect operation.

⚠️ Warning
The items listed below are extremely important and must never be neglected. A problem, which may not be noticed at normal operating speeds, may be greatly exaggerated at high speeds.

General
Make sure that the motorcycle has been maintained according to the scheduled maintenance chart.

Brakes
Check that the front and rear brakes are functioning correctly.

Coolant
Check that the coolant level is at the upper level line in the expansion tank. Always check the level with the engine cold.

Electrical Equipment
Make sure that all electrical equipment such as the headlight, rear/brake light, turn signals and horn all work correctly.
How to Ride the Motorcycle

Engine Oil
Check that the engine oil level is correct. Make sure that the correct grade and type of oil is used when topping off.

Drive Chain
Make sure that the drive chain is correctly adjusted and lubricated. Inspect the chain for wear and damage.

Fuel
Have sufficient fuel for the increased fuel consumption that will result from high speed operation.

Caution
In many countries, the exhaust system for this model is equipped with a catalytic converter to help reduce exhaust emission levels.

The catalytic converter can be permanently damaged if the motorcycle is allowed to run out of fuel or if the fuel level is allowed to get very low.

Always make sure you have adequate fuel for your trip.

Luggage
Make sure that any luggage containers are closed, locked and securely installed on the motorcycle.

Miscellaneous
Visually check that all fasteners are tight.

Steering
Check that the handlebar turns smoothly without excessive free play or tight spots. Make sure that the control cables do not restrict the steering in any way.

Tires
High speed operation is hard on tires, and tires that are in good condition are crucial to riding safely. Examine their overall condition, inflate to the correct pressure (when the tires are cold), and check the wheel balance. Securely install the valve caps after checking tire pressures. Observe the information given in the maintenance and specification sections on tire checking and tire safety.
Accessories, Loading and Passengers

The addition of accessories and carrying of additional weight can affect the motorcycle’s handling characteristics causing changes in stability and necessitating a reduction in speed. The following information has been prepared as a guide to the potential hazards of adding accessories to a motorcycle and carrying passengers and additional loads.

Accessories

**Warning**

Do not install accessories or carry luggage that impairs the control of the motorcycle.

Make sure that you have not adversely affected any lighting component, road clearance, banking capability (i.e. lean angle), control operation, wheel travel, front fork movement, visibility in any direction, or any other aspect of the motorcycle’s operation.

**Warning**

Owners should be aware that the only approved parts, accessories and conversions for any Triumph motorcycle are those which carry official Triumph approval and are installed to the motorcycle by an authorized dealer.

In particular, it is extremely hazardous to install or replace parts or accessories whose installation requires the dismantling of, or addition to, either the electrical or fuel systems and any such modification could cause a safety hazard.

The installation of any non-approved parts, accessories or conversions may adversely affect the handling, stability or other aspect of the motorcycle operation that may result in an accident causing injury or death.

Triumph does not accept any liability whatsoever for defects caused by the installation of non-approved parts, accessories or conversions or the installation of any approved parts, accessories or conversions by non-approved personnel.
Accessories, Loading and Passengers

⚠️ Warning

Install only genuine Triumph accessories to the correct Triumph motorcycle model.
Always check the Triumph Fitting Instruction associated with the genuine Triumph accessory. Make sure the Triumph motorcycle model that the Triumph accessory is to be installed on, is listed as approved for the genuine Triumph accessory. For all Triumph Fitting Instructions, see www.triumphinstructions.com.

Never install genuine Triumph accessories to a Triumph motorcycle model that is not listed in the associated Triumph Fitting Instruction, as this may affect handling, stability or other aspects of the motorcycle operation that may result in an accident causing severe injuries or death.

⚠️ Warning

Never ride an accessory equipped motorcycle, or a motorcycle carrying a payload of any kind, at speeds above 80 mph (130 km/h). In either/both of these conditions, speeds in excess of 80 mph (130 km/h) should not be attempted even where the legal speed limit permits this.

The presence of accessories and/or payload will cause changes in the stability and handling of the motorcycle.

Failure to allow for changes in motorcycle stability may lead to loss of motorcycle control and an accident. When riding at high speed, always be aware that various motorcycle configuration and environmental factors can adversely affect the stability of your motorcycle. For example:
- Incorrectly balanced loads on both sides of the motorcycle
- Incorrectly adjusted front and rear suspension settings
- Incorrectly adjusted tire pressures
- Excessively or unevenly worn tires
- Side winds and turbulence from other vehicles
- Loose clothing.

Remember that the 80 mph (130 km/h) absolute limit will be reduced by the installation of non-approved accessories, incorrect loading, worn tires, overall motorcycle condition and poor road or weather conditions.
## Accessories, Loading and Passengers

### Loading

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
</table>
| Always make sure that any loads carried are evenly distributed on both sides of the motorcycle. Make sure that the load is correctly secured so that it will not move around while the motorcycle is in motion.  
Evenly distribute the load within each pannier (if equipped). Pack heavy items at the bottom and on the inboard side of the pannier.  
Always check the load security regularly (though not while the motorcycle is in motion) and make sure that the load does not extend beyond the rear of the motorcycle.  
Never exceed the maximum vehicle loading weight as specified in the Specifications section.  
This maximum loading weight is made up from the combined weight of the rider, passenger, any accessories installed and any load carried.  
For models that have adjustable suspension settings, make sure that front and rear spring preload and damping settings are suitable for the loading condition of the motorcycle.  
Note the maximum permissible payload for the panniers is stated on a label inside the pannier.  
Incorrect loading may result in an unsafe riding condition leading to an accident. |

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
</table>
| Never attempt to store any items between the frame and the fuel tank.  
This can restrict the steering and will cause loss of control leading to an accident.  
Weight attached to the handlebar or front fork will increase the mass of the steering assembly and can result in loss of steering control leading to an accident. |

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
</table>
| The maximum safe load for each pannier is stated on a label inside the pannier.  
Never exceed this loading limit as this may cause the motorcycle to become unstable leading to loss of motorcycle control and an accident. |
Warning
If the passenger seat is used to carry small objects, they must not exceed 11 lb (5 kg) in weight, must not impair control of the motorcycle, must be securely attached and must not extend beyond the rear or sides of the motorcycle.
Carrying objects in excess of 11 lb (5 kg) in weight, that are insecure, impair control or extend beyond the rear or sides of the motorcycle may lead to loss of motorcycle control and an accident.
Even if small objects are correctly loaded onto the passenger seat, the maximum speed of the motorcycle must be reduced to 80 mph (130 km/h).

Passengers

Warning
The handling and braking capabilities of a motorcycle will be affected by the presence of a passenger.
The rider must make allowances for these changes when operating the motorcycle with a passenger and should not attempt such operation unless trained to do so and without becoming familiar and comfortable with the changes in motorcycle operating characteristics that this brings about.
Motorcycle operation without making allowances for the presence of a passenger could lead to loss of motorcycle control and an accident.

Warning
Do not carry a passenger unless they are tall enough to reach the footrests provided.
A passenger who is not tall enough to reach the footrests will be unable to sit securely on the motorcycle and may cause instability leading to loss of control and an accident.

Warning
Your passenger should be instructed that they can cause loss of motorcycle control by making sudden movements or by adopting an incorrect seated position.
The rider should instruct the passenger as follows:
- It is important that the passenger sits still while the motorcycle is in motion and does not interfere with the operation of the motorcycle.
- To keep their feet on the passenger footrests and to firmly hold onto the seat strap or the rider’s waist or hips.
- Advise the passenger to lean with the rider when traveling around corners and not to lean unless the rider does so.

Warning
Do not carry animals on your motorcycle.
An animal could make sudden and unpredictable movements that could lead to loss of motorcycle control and an accident.

Warning

Triumph Motorcycles cannot accept any responsibility for damage or injury resulting from incorrect maintenance or improper adjustment carried out by the owner.

Incorrect or neglected maintenance can lead to a dangerous riding condition.

Always have an authorized Triumph dealer carry out the scheduled maintenance of this motorcycle.

Warning

All maintenance is vitally important and must not be neglected. Incorrect maintenance or adjustment may cause one or more parts of the motorcycle to malfunction. A malfunctioning motorcycle may lead to loss of control and an accident.

Weather, terrain and geographical location affect maintenance. The maintenance schedule should be adjusted to match the particular environment in which the motorcycle is used and the demands of the individual owner.

Special tools, knowledge and training are required in order to correctly carry out the maintenance items listed in the scheduled maintenance chart. Only an authorized Triumph dealer will have this knowledge and equipment.

Incorrect or neglected maintenance can lead to a dangerous riding condition. Always have an authorized Triumph dealer carry out the scheduled maintenance of this motorcycle.

To maintain the motorcycle in a safe and reliable condition, the maintenance and adjustments outlined in this section must be carried out as specified in the schedule of daily checks, and also in line with the scheduled maintenance chart. The information that follows describes the procedures to follow when carrying out the daily checks and some simple maintenance and adjustment items.
Scheduled maintenance may be carried out by your authorized Triumph dealer in three ways: annual maintenance, mileage based maintenance or a combination of both, depending on the mileage the motorcycle travels each year.

1. Motorcycles traveling less than 6,000 miles (10,000 km) per year must be maintained annually. In addition to this, mileage based items require maintenance at their specified intervals, as the motorcycle reaches this mileage.

2. Motorcycles traveling approximately 6,000 miles (10,000 km) per year must have the annual maintenance and the specified mileage based items carried out together.

3. Motorcycles traveling more than 6,000 miles (10,000 km) per year must have the mileage based items maintained as the motorcycle reaches the specified mileage. In addition to this, annual based items will require maintenance at their specified annual intervals.

In all cases maintenance must be carried out at or before the specified maintenance intervals shown. Consult an authorized Triumph dealer for advice on which maintenance schedule is most suitable for your motorcycle.

Triumph Motorcycles cannot accept any responsibility for damage or injury resulting from incorrect maintenance or improper adjustment.

Service Symbol/General Warning Symbol

The service symbol will illuminate for five seconds after the motorcycle start up sequence as a reminder that a service is due in approximately 60 miles (100 km). The service symbol will illuminate permanently when the mileage is reached, it will remain permanently illuminated until the service interval is reset using the Triumph Diagnostic tool.

The general warning symbol will flash if an ABS or engine management fault has occurred and the ABS and/or MIL warning lights are illuminated. Contact an authorized Triumph dealer as soon as possible to have the fault checked and rectified.

</table>
Engine Oil

Motorcycle operation with insufficient, deteriorated, or contaminated engine oil will cause accelerated engine wear and may result in engine or transmission seizure. Seizure of the engine or transmission may lead to sudden loss of motorcycle control and an accident.

In order for the engine, transmission, and clutch to function correctly, maintain the engine oil at the correct level, and change the engine oil and oil filter in accordance with scheduled maintenance requirements.

Engine Oil Level Inspection

Never start the engine or run the engine in a confined area. Exhaust fumes are poisonous and can cause loss of consciousness and death within a short period of time. Always operate the motorcycle in the open air or in an area with adequate ventilation.

To inspect the engine oil level:
- Start the engine and run at idle for approximately five minutes.
Maintenance

• Stop the engine, then wait for at least three minutes for the oil to settle.

Note
An accurate indication of the level of oil in the engine is only shown when the engine is at normal operating temperature, the motorcycle is upright (not on the side stand) and when the dipstick has been fully tightened.

Do not add oil through the dipstick hole in the crankcase.

• Remove the dipstick.
• The oil level is indicated by lines on the dipstick. When full, the indicated oil level must be level with the upper marking on the dipstick.
• If the oil level is below the lower marking, remove the filler plug and add oil a little at a time through the filler plug hole in the clutch cover until the correct level is reached.
• Once the correct level is reached, install and tighten the filler plug.

Engine Oil and Filter Change

⚠️ Warning
Prolonged or repeated contact with engine oil can lead to skin dryness, irritation and dermatitis.
Used engine oil contains harmful contamination that can lead to skin cancer.
Always wear suitable protective clothing and avoid skin contact with used oil.

⚠️ Warning
The oil may be hot to the touch.
Avoid contact with the hot oil by wearing suitable protective clothing, gloves, eye protection, etc.
Contact with hot oil may cause the skin to be scalded or burned.

⚠️ Warning
If the engine has recently been running, the exhaust system will be hot.
Before working on or near the exhaust system, allow sufficient time for the exhaust system to cool as touching any part of a hot exhaust system could cause burn injuries.

The engine oil and engine oil filter must be replaced in accordance with scheduled maintenance requirements.

1. Oil drain plug
2. Oil filter
To change the engine oil and engine oil filter:

- Warm up the engine thoroughly, and then stop the engine and secure the motorcycle in an upright position on level ground.
- Place an oil drain pan beneath the engine.
- Remove the oil drain plug.
- Unscrew and remove the oil filter using Triumph service tool T3880313. Dispose of the old oil filter in an environmentally friendly way.
- Apply a thin smear of clean engine oil to the sealing ring of the new oil filter. Install the oil filter and tighten to 89 lbf in (10 Nm).
- After the oil has completely drained out, install a new sealing washer to the drain plug. Install and tighten the drain plug to 18 lbf ft (25 Nm).
- Fill the engine with a Semi or fully synthetic 10W/40 or 10W/50 motorcycle engine oil which meets specification API SH (or higher) and JASO MA, such as Castrol Power 1 Racing 4T 10W-40 (fully synthetic) engine oil, sold as Castrol Power RS Racing 4T 10W-40 (fully synthetic) in some countries.
- Start the engine and allow it to idle for a minimum of 30 seconds.

**Caution**

Raising the engine speed above idle, before the engine oil reaches all parts of the engine can cause engine damage or seizure.

Only raise engine speed after running the engine for 30 seconds to allow the engine oil to circulate fully.

**Caution**

If the engine oil pressure is too low, the low oil pressure warning light will illuminate. If this light stays on when the engine is running, stop the engine immediately and investigate the cause.

Running the engine with low oil pressure will cause engine damage.

- Make sure that the low oil pressure warning light remains off and the oil pressure message is not shown in the instrument display screen.
- Stop the engine and recheck the oil level. Adjust if necessary.

**Disposal of Used Engine Oil and Oil Filters**

To protect the environment, do not pour oil on the ground, down sewers or drains, or into groundwater sources. Do not place used oil filters in with general waste. If in doubt, contact your local authority.
Maintenance

Engine Oil Specification and Grade (10W/40 & 10W/50)

Triumph’s high performance fuel injected engines are designed to use 10W/40 or 10W/50 semi or fully synthetic motorcycle engine oil that meets specification API SH (or higher) and JASO MA, such as Castrol Power 1 Racing 4T 10W-40 (fully synthetic) engine oil, sold as Castrol Power RS Racing 4T 10W-40 (fully synthetic) in some countries.

Refer to the chart below for the correct oil viscosity (10W/40 or 10W/50) to be used in your riding area.

<table>
<thead>
<tr>
<th>Ambient Temperature (°C)</th>
<th>Ambient Temperature (°F)</th>
</tr>
</thead>
<tbody>
<tr>
<td>-20</td>
<td>-4</td>
</tr>
<tr>

<td>68</td>
</tr>
<tr>
<td>30</td>
<td>86</td>
</tr>
<tr>
<td>40</td>
<td>104 (°F)</td>
</tr>
</tbody>
</table>

**Oil Viscosity Temperature Range**

Do not add any chemical additives to the engine oil. The engine oil also lubricates the clutch and any additives could cause the clutch to slip.

Do not use mineral, vegetable, non-detergent oil, castor based oils or any oil not conforming to the required specification. The use of these oils may cause instant, severe engine damage.

Make sure that no foreign matter enters the crankcase during an engine oil change or top off.

Cooling System

To ensure efficient engine cooling, check the coolant level each day before riding the motorcycle, and top off the coolant if the level is low.

**Note**

A year round, Hybrid Organic Acid Technology (known as Hybrid OAT or HOAT) coolant is installed in the cooling system when the motorcycle leaves the factory. It is colored green, contains a 50% solution of ethylene glycol based antifreeze, and has a freezing point of -31°F (-35°C).

**Corrosion Inhibitors**

HD4X Hybrid OAT coolant contains corrosion inhibitors and antifreeze suitable for aluminum engines and radiators. Always use the coolant in accordance with the instructions of the manufacturer.

Coolant that contains anti-freeze and corrosion inhibitors contains toxic chemicals that are harmful to the human body. Never swallow antifreeze or any of the motorcycle coolant.
Note

HD4X Hybrid OAT coolant, as supplied by Triumph, is premixed and does not need to be diluted prior to filling or topping off the cooling system.

To protect the cooling system from corrosion, the use of corrosion inhibitor chemicals in the coolant is essential.

If coolant containing a corrosion inhibitor is not used, the cooling system will accumulate rust and scale in the water jacket and radiator. This will block the coolant passages, and considerably reduce the efficiency of the cooling system.

Coolant Level Inspection

Note

The coolant level should be checked when the engine is cold (at room or ambient temperature).

To inspect the coolant level:

- Position the motorcycle on level ground and in an upright position. The expansion tank can be viewed from the left hand side of the motorcycle, below and towards the front of the fuel tank.
- Check the coolant level in the expansion tank. The coolant level must be between the MAX and MIN marks.
- If the coolant is below the minimum level, the coolant level must be adjusted.

Coolant Level Adjustment

Warning

Do not remove the expansion tank or radiator pressure cap when the engine is hot.

When the engine is hot, the coolant inside the radiator will be hot and also under pressure.

Contact with this hot, pressurized coolant will cause scalds and skin damage.

1. Expansion tank
2. Filler cap
3. MAX mark
4. MIN mark
Caution

If hard water is used in the cooling system, it will cause scale accumulation in the engine and radiator and considerably reduce the efficiency of the cooling system. Reduced cooling system efficiency may cause the engine to overheat and suffer severe damage.

Note

If the coolant level is being checked because the coolant has overheated, also check the level in the radiator and top off if necessary.

In an emergency, distilled water can be added to the cooling system. However, the coolant must then be drained and replenished with HD4X Hybrid OAT coolant as soon as possible.

Coolant Change

It is recommended that the coolant is changed by an authorized Triumph dealer in accordance with scheduled maintenance requirements.

Radiator and Hoses

Warning

The fan operates automatically when the engine is running.

Always keep hands and clothing away from the fan.

Contact with the rotating fan may cause an accident and/or personal injury.
**Caution**

Using high pressure water sprays, such as from a car wash facility or household pressure washer, can damage the radiator fins, cause leaks and impair the radiator’s efficiency.

Do not obstruct or deflect airflow through the radiator by installing unauthorized accessories, either in front of the radiator or behind the cooling fan.

Interference with the radiator airflow can cause overheating, potentially resulting in engine damage.

Check the radiator hoses for cracks or deterioration, and tension clips for tightness in accordance with scheduled maintenance requirements. Have your authorized Triumph dealer replace any defective items.

Check the radiator grille and fins for obstructions by insects, leaves or mud. Clean off any obstructions with a stream of low pressure water.

**Throttle Control**

**Warning**

Always be alert for changes in the ‘feel’ of the throttle control and have the throttle system checked by an authorized Triumph dealer if any changes are detected.

Changes can be due to wear in the mechanism, which could lead to a sticking throttle control.

A sticking or stuck throttle control will lead to loss of motorcycle control and an accident.

**Throttle Inspection**

**Warning**

Use of the motorcycle with a sticking or damaged throttle control will interfere with the throttle function resulting in loss of motorcycle control and an accident.

To avoid continued use of a sticking or damaged throttle control, always have it checked by your authorized Triumph dealer.

To inspect the throttle:

- Check that the throttle opens smoothly, without undue force and that it closes without sticking. Have your authorized Triumph dealer check the throttle system if a problem is detected or any doubt exists.
Maintenance

• If there is an incorrect amount of free play, Triumph recommends that you have your authorized Triumph dealer investigate.

• Check that there is 0.04 - 0.08 in (1 - 2 mm) of throttle grip free play when lightly turning the throttle grip back and forth.

Clutch
The motorcycle is equipped with a cable-operated clutch.

If the clutch lever has excessive free play, the clutch may not disengage fully. This will cause difficulty in shifting gear and selecting neutral. This may cause the engine to stall and make the motorcycle difficult to control.

Conversely, if the clutch lever has insufficient free play the clutch may not engage fully, causing the clutch to slip, which will reduce performance and cause premature clutch wear.

Clutch lever free play must be checked in accordance with scheduled maintenance requirements.

Clutch Inspection
Check that there is 0.08 - 0.12 in (2 - 3 mm) clutch lever free play at the lever.

If there is an incorrect amount of free play, adjustments must be made.
Clutch Adjustment

To adjust the clutch:

- Turn the adjuster sleeve until the correct amount of clutch lever free play is achieved.

1. Clutch lever
2. Adjuster sleeve (lock nut fully loosened)
3. Correct clearance 0.08 - 0.12 in (2 - 3 mm)

- Check that there is 0.08 - 0.12 in (2 - 3 mm) clutch lever free play at the lever.
- If there is an incorrect amount of free play, adjustments must be made.

• If correct adjustment cannot be made using the lever adjuster, use the cable adjuster at the lower end of the cable.

1. Adjuster locknuts
2. Clutch outer cable

- Loosen the adjuster lock nut.
- Turn the outer cable adjuster to give 0.08 - 0.12 in (2 - 3 mm) of free play at the clutch lever.
- Tighten the locknut to 30.1 lbf in (3.5 Nm).
Maintenance

Drive Chain

⚠️ Warning
A loose or worn chain, or a chain that breaks or jumps off the sprockets could catch on the engine sprocket or lock the rear wheel.

A chain that snags on the engine sprocket will injure the rider and lead to loss of motorcycle control and an accident.

Similarly, locking the rear wheel will lead to loss of motorcycle control and an accident.

For safety and to prevent excessive wear the drive chain must be checked, adjusted and lubricated in accordance with the scheduled maintenance requirements. Checking, adjustment and lubrication must be carried out more frequently for extreme conditions such as high speed riding, salty or heavily gritted roads.

If the chain is badly worn or incorrectly adjusted (either too loose or too tight) the chain could jump off the sprockets or break. Therefore, always replace worn or damaged chains using genuine Triumph parts supplied by an authorized Triumph dealer.

Drive Chain Lubrication

Lubrication is necessary every 200 miles (300 km) and also after riding in wet weather, on wet roads, or any time that the chain appears dry.

To lubricate the drive chain:

- Use the special drive chain lubricant as recommended in the Specifications section.
- Apply lubricant to the sides of the rollers then allow the motorcycle to stand unused for at least eight hours (overnight is ideal). This will allow the lubricant to penetrate to the drive chain O-rings etc.
- Before riding, wipe off any excess lubricant.
- If the drive chain is especially dirty, clean first and then apply lubricant as mentioned above.

⚠️ Caution
Do not use a pressure washer to clean the drive chain as this may cause damage to the drive chain components.
Drive Chain Free Movement Inspection

**Warning**

Before starting work, make sure the motorcycle is stabilized and adequately supported. This will help prevent injury to the operator or damage to the motorcycle.

1. **Maximum movement position**

To inspect the drive chain free movement:

- Place the motorcycle on a level surface and hold it in an upright position with no weight on it.
- Rotate the rear wheel by pushing the motorcycle to find the position where the chain is tightest, and measure the vertical movement of the chain midway between the sprockets.
- The vertical movement of the drive chain must be in the range of 0.79 to 1.18 in (20 - 30 mm).

Drive Chain Free Movement Adjustment

1. Adjuster bolt
2. Adjuster bolt lock nut
3. Rear wheel spindle nut

If the drive chain free movement is incorrect, adjustment must be made as follows:

- Loosen the wheel spindle nut.
- Loosen the lock nuts on both the left hand and right hand chain adjuster bolts.
- Moving both adjusters by an equal amount, turn the adjuster bolts clockwise to increase drive chain free movement and counterclockwise to reduce drive chain free movement.
- When the correct amount of drive chain free movement has been set, push the wheel into firm contact with the adjusters. Tighten both adjuster lock nuts to 15 lbf ft (20 Nm) and the rear wheel spindle nut to 81 lbf ft (110 Nm).
- Repeat the drive chain adjustment check. Readjust if necessary.
Maintenance

⚠️ Warning
Operation of the motorcycle with insecure adjuster lock nuts or a loose wheel spindle may result in impaired stability and handling of the motorcycle. This impaired stability and handling may lead to loss of control or an accident.

- Check the rear brake effectiveness. Rectify if necessary.

⚠️ Warning
It is dangerous to operate the motorcycle with defective brakes; you must have your authorized Triumph dealer take remedial action before you attempt to ride the motorcycle again. Failure to take remedial action may reduce braking efficiency leading to loss of motorcycle control or an accident.

Drive Chain and Sprocket Wear Inspection

⚠️ Warning
Never neglect drive chain maintenance and always have drive chains installed by an authorized Triumph dealer.
Use a genuine Triumph supplied drive chain as specified in the Triumph Parts Catalog. The use of non-approved drive chains may result in a broken drive chain or may cause the drive chain to jump off the sprockets leading to loss of motorcycle control or an accident.

⚠️ Caution
If the sprockets are found to be worn, always replace the sprockets and drive chain together. Replacing worn sprockets without also replacing the drive chain will lead to premature wear of the new sprockets.

1. Measure across 20 links
2. Weight
To inspect the drive chain and sprocket wear:

- Remove the chain guard.
- Stretch the chain taut by hanging a 20 - 40 lb (10 - 20 kg) weight on the chain.
- Measure the length of 20 links on the straight part of the chain from the pin center of the 1st pin to the pin center of the 21st pin. Since the chain may wear unevenly, take measurements in several places.
- If the length exceeds the maximum service limit of 12.55 in (319 mm), the chain must be replaced.
- Rotate the rear wheel and inspect the drive chain for damaged rollers, and loose pins and links.
- Also inspect the sprockets for unevenly or excessively worn or damaged teeth.

![Worn Tooth](Engine Sprocket) ![Worn Tooth](Rear Sprocket)

(Sprocket wear exaggerated for illustrative purposes)

- If there is any irregularity, have the drive chain and/or the sprockets replaced by an authorized Triumph dealer.
- Re-install the chain guard, tightening the fasteners to 35 lbf in (4 Nm).

### Brakes

#### Breaking-in New Brake Pads and Discs

**Warning**

Brake pads must always be replaced as a wheel set. At the front, where two calipers are installed on the same wheel, replace all the brake pads in both calipers.

Replacing individual pads will reduce braking efficiency and may cause an accident.

After replacement brake pads have been installed, ride with extreme caution until the new pads have ‘broken in’.

New brake discs and pads require a period of careful breaking-in that will optimize the performance and longevity of the discs and pads. The recommended distance for breaking-in new pads and discs is 200 miles (300 km).

During this period, avoid extreme braking, ride with caution and allow for greater braking distances.
Maintenance

Breaking-in New Brake Pads and Discs

⚠️ Warning

Brake pads must always be replaced as a wheel set. At the front, where two calipers are installed on the same wheel, replace all the brake pads in both calipers.

Replacing individual pads will reduce braking efficiency and may cause an accident.

After replacement brake pads have been installed, ride with extreme caution until the new pads have ‘broken in’.

New brake discs and pads require a period of careful breaking-in that will optimize the performance and longevity of the discs and pads. The recommended distance for breaking-in new pads and discs is 200 miles (300 km).

During this period, avoid extreme braking, ride with caution and allow for greater braking distances.

Front Brake Wear Inspection

⚠️ Warning

If installing new proprietary brand brake pads, check that the carrier plate of the brake pad is the specified thickness shown in the table.

Installing brake pads with the carrier plate less than the specified thickness may result in brake failure due to the possible loss of the brake pad as it wears.
Brake pads must be inspected in accordance with scheduled requirements and replaced if worn to, or beyond the minimum service thickness.

If the lining thickness of any brake pad is less than that specified in the table, replace all the brake pads on the wheel.

<td>Minimum Service Thickness (Brake Pad Lining and Carrier Plate)</td>
<td>0.23 in (5.8 mm)</td>
<td>0.21 in (5.5 mm)</td>
</tr>
</tbody>
</table>

Brake pads for this model supplied by Triumph will have the carrier plate at the recommended thickness. Always have replacement brake pads supplied and installed by your Triumph dealer.
Rear Brake Wear Inspection

⚠️ Warning

If installing new proprietary brand brake pads, check that the carrier plate of the brake pad is the specified thickness shown in the table. Installing brake pads with the carrier plate less than the specified thickness may result in brake failure due to the possible loss of the brake pad as it wears.

<table>
<thead>
<tr>
<th></th>
<th>All Models</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Carrier Plate Minimum Thickness</strong></td>
<td>0.12 in (3.0 mm)</td>
</tr>
<tr>
<td><strong>Minimum Brake Pad Lining Thickness</strong></td>
<td>0.06 in (1.5 mm)</td>
</tr>
<tr>
<td><strong>Minimum Service Thickness (Brake Pad Lining and Carrier Plate)</strong></td>
<td>0.18 in (4.5 mm)</td>
</tr>
</tbody>
</table>

1. Carrier plate
2. Brake pad lining

Brake pads supplied by Triumph will have the carrier plate at the recommended thickness. Always have replacement brake pads supplied and installed by your Triumph dealer.

If the lining thickness of any brake pad is less than that specified in the table, replace all the brake pads on the wheel.
Disc Brake Fluid

⚠️ Warning

Brake fluid is hygroscopic which means it will absorb moisture from the air.
Any absorbed moisture will greatly reduce the boiling point of the brake fluid causing a reduction in braking efficiency.
Because of this, always replace brake fluid in accordance with scheduled maintenance requirements.
Always use new brake fluid from a sealed container and never use fluid from an unsealed container or from one which has been previously opened.
Do not mix different brands or grades of brake fluid.
Check for fluid leakage around brake installed, seals and joints and also check the brake hoses for splits, deterioration and damage.
Always rectify any faults before riding.
Failure to observe and act upon any of these items may cause a dangerous riding condition leading to loss of control and an accident.

⚠️ Warning

If the ABS is not functioning, the brake system will continue to function as a non-ABS equipped brake system.
In this situation, braking too hard will cause the wheels to lock resulting in loss of control and an accident.
Reduce speed and do not continue to ride for longer than is necessary with the indicator light illuminated. Contact an authorized Triumph dealer as soon as possible to have the fault checked and rectified.

Inspect the level of brake fluid in both reservoirs and change the brake fluid in accordance with scheduled maintenance requirements. Use only DOT 4 fluid as recommended in the Specification section. The brake fluid must also be changed if it becomes, or is suspected of having become contaminated with moisture or any other contaminants.

Note

A special tool is required to bleed the ABS braking system. Contact your authorized Triumph dealer when the brake fluid needs replacing or the hydraulic system requires maintenance.
Front Brake Fluid Level Inspection and Adjustment

Street Triple RS

⚠️ Warning

If there has been an appreciable drop in the level of the fluid in either fluid reservoir, consult your authorized Triumph dealer for advice before riding. Riding with depleted brake fluid levels, or with a brake fluid leak is dangerous and will cause reduced brake performance potentially leading to loss of motorcycle control and an accident.

To inspect the front brake fluid level:
- Check the level of brake fluid visible in the MIN and MAX section of the reservoir.
- The brake fluid level in the reservoir must be kept between the MAX and MIN level lines (reservoir held horizontal).

To adjust the brake fluid level:
- Loosen the reservoir cap retaining screws and remove the reservoir cap and the diaphragm seal.
- Fill the reservoir to the MAX level line using new DOT 4 brake fluid from a sealed container.
- Install the diaphragm seal into the reservoir cap and make sure that the holes for the fasteners in the reservoir cap and the diaphragm seal are correctly aligned.

1. Reservoir cap retaining screws
2. MAX level line
3. MIN level line

1. Reservoir cap
2. Diaphragm seal
3. Reservoir cap retaining screw holes
- Install the reservoir cap retaining screws into the reservoir cap and diaphragm seal assembly.
- Hold the assembly together and position the reservoir cap, diaphragm seal and reservoir cap retaining screws onto the reservoir.
Front Brake Fluid Level Inspection and Adjustment

All Models except Street Triple RS

⚠️ Warning

If there has been an appreciable drop in the level of the fluid in either fluid reservoir, consult your authorized Triumph dealer for advice before riding. Riding with depleted brake fluid levels, or with a brake fluid leak is dangerous and will cause reduced brake performance potentially leading to loss of motorcycle control and an accident.

1. Front brake fluid reservoir, upper level line
2. Lower level line

To inspect the front brake fluid level:
- Check the level of brake fluid visible in the window at the front of the reservoir unit.
- The brake fluid level must be kept between the upper and lower level lines (reservoir held horizontal).

1. Reservoir cap, diaphragm seal and reservoir cap retaining screws assembly
2. Reservoir

⚠️ Warning

If the reservoir cap retaining screws are over tightened this can result in a brake fluid leak.
A dangerous riding condition leading to loss of motorcycle control and an accident could result if this warning is ignored.

1. Reservoir cap retaining screws
   - Tighten the reservoir cap retaining screws to 6 lbf in (0.7 Nm).
To adjust the brake fluid level:

- Loosen the reservoir cap retaining screws and remove the reservoir cap and the diaphragm seal.
- Fill the reservoir to the upper level line using new DOT 4 from a sealed container.
- Reinstall the reservoir cap making sure that the diaphragm seal is correctly positioned between the reservoir cap and the reservoir body.
- Tighten the reservoir cap retaining screws to 9 lbf in (1 Nm).

Rear Brake Fluid Level Inspection and Adjustment

⚠️ **Warning**

If there has been an appreciable drop in the level of the fluid in either fluid reservoir, consult your authorized Triumph dealer for advice before riding. Riding with depleted brake fluid levels, or with a brake fluid leak is dangerous and will cause reduced brake performance potentially leading to loss of motorcycle control and an accident.

To inspect the rear brake fluid level:

- Check the level of brake fluid visible in the reservoir.
- The brake fluid level must be kept between the upper and lower level lines (reservoir held horizontal).

To adjust the rear brake fluid level:

- Loosen the reservoir cap and remove the diaphragm seal.
- Fill the reservoir to the upper level line using new DOT 4 brake fluid from a sealed container.
- Re-install the reservoir cap making sure that the diaphragm seal is correctly installed.
Brake Light Switches

⚠️ Warning
Riding the motorcycle with defective brake lights is illegal and dangerous. An accident causing injury to the rider and other road users may result from use of a motorcycle with defective brake lights.

The brake light is activated independently by either the front or rear brake. If, with the ignition in the ON position, the brake light does not work when the front brake lever is pulled or the rear brake pedal is pressed, have your authorized Triumph dealer investigate and rectify the fault.

Mirrors

⚠️ Warning
Operation of the motorcycle with incorrectly adjusted mirrors is dangerous. Operation of the motorcycle with incorrectly adjusted mirrors will result in loss of vision to the rear of the motorcycle. It is dangerous to ride a motorcycle without sufficient rearward vision.

Always adjust the mirrors to provide sufficient rearward vision before riding the motorcycle.

⚠️ Warning
Never attempt to clean or adjust mirrors while riding the motorcycle. Removal of the rider’s hands from the handlebars while riding the motorcycle will diminish the ability of the rider to maintain control of the motorcycle.

Attempting to clean or adjust mirrors while riding the motorcycle may result in loss of control of the motorcycle and an accident.

Only attempt to clean or adjust the mirrors while stationary.
Models with Bar End Mirrors

⚠️ **Warning**
Incorrect adjustment of the bar end mirrors may cause the mirror arm to contact the fuel tank, brake or clutch levers or other parts of the motorcycle.

This will restrict brake or clutch lever operation or restrict steering movement, resulting in loss of motorcycle control and an accident.

Adjust the mirrors as required to make sure they do not contact any part of the motorcycle. After adjustment, move the handlebar to the left and right full lock while checking that the mirrors do not contact the fuel tank, brake or clutch levers or other parts of the motorcycle.

⚠️ **Caution**
Incorrect adjustment of the bar end mirrors may cause the mirror arm to contact the fuel tank, brake or clutch levers or other parts of the motorcycle.

This will result in damage to the fuel tank, brake or clutch levers or other parts of the motorcycle.

Adjust the mirrors as required to make sure they do not contact any part of the motorcycle. After adjustment, move the handlebar to the left and right full lock while checking that the mirrors do not contact the fuel tank, brake or clutch levers or other parts of the motorcycle.

The bar end mirrors will be set by your authorized Triumph dealer and will not normally require any adjustment. Should adjustment be necessary, do not rotate the mirror beyond 75°, measured from the vertical section of the mirror arm.
Steering

⚠️ Caution

To prevent risk of injury from the motorcycle falling during the inspection, make sure that the motorcycle is stabilized and secured on a suitable support.

Do not exert extreme force against each wheel or rock each wheel vigorously as this may cause the motorcycle to become unstable and cause injury by falling from its support.

Make sure that the position of the support block will not cause damage to the motorcycle.

Steering Inspection

⚠️ Warning

Riding the motorcycle with incorrectly adjusted or defective steering head bearings is dangerous and may cause loss of motorcycle control and an accident.

Inspecting the Steering for Free Play

To inspect the steering:

• Position the motorcycle on level ground, in an upright position.

• Raise the front wheel above the ground and support the motorcycle.

• Standing at the front of the motorcycle, hold the lower end of the front forks outer tube and try to move them forward and backward.

• If any free play can be detected in the steering head bearings, ask your authorized Triumph dealer to inspect and rectify any faults before riding.

• Remove the support and place the motorcycle on the side stand.
Wheel Bearings Inspection

Warning

Riding with worn or damaged front or rear wheel bearings is dangerous and may cause impaired handling and instability leading to an accident.
If in doubt, have the motorcycle inspected by an authorized Triumph dealer before riding.

The wheel bearings must be inspected at the intervals specified in the scheduled maintenance chart.

Inspecting the Wheel Bearings

To inspect the wheel bearings:

- Position the motorcycle on level ground, in an upright position.
- Raise the front wheel off the ground and support the motorcycle.
- Standing at the side of the motorcycle, gently rock the top of the front wheel from side to side.
- If any free play can be detected, ask your authorized Triumph dealer to inspect and rectify any faults before riding.

Front Fork Inspection

Warning

Riding the motorcycle with defective or damaged suspension is dangerous and may lead to loss of control and an accident.
Warning

Never attempt to dismantle any part of the suspension units
All suspension units contain pressurized oil.
Skin and eye damage can result from contact with the pressurized oil.

Street Triple S (40.2 cu in (660 cc)) shown

To inspect the forks:
• Position the motorcycle on level ground.
• While holding the handlebars and applying the front brake, pump the forks up and down several times.
• If roughness or excessive stiffness is detected, consult your authorized Triumph dealer.
• Examine each fork for any sign of damage, scratching of the slider surface, or for oil leaks.
• If any damage or leakage is found, consult an authorized Triumph dealer.

Suspension

Front Suspension

Warning

Make sure that the correct balance between front and rear suspension is maintained.
Suspension imbalance could significantly change handling characteristics leading to loss of control and an accident.
Refer to the table for further information or consult your authorized Triumph dealer.

Warning

Make sure that the adjusters are set to the same setting on both front suspension units.
Settings that vary from left to right may affect handling and stability resulting in loss of motorcycle control and an accident.

Front Suspension Settings

The motorcycle is delivered from the factory with all the suspension settings set at the Road (Solo Riding) setting, as shown in the relevant suspension settings tables. The Road suspension settings provide a comfortable ride and good handling characteristics for general, solo riding.
Maintenance

The details shown in the tables are only a guide. Setting requirements may vary for rider and passenger weight and personal preferences.

1 Number of adjuster turns clockwise from the fully counterclockwise position.
2 Number of adjuster turns counterclockwise from the fully clockwise position.

**Front Suspension Spring Preload Adjustment**

**Street Triple R and Street Triple R - LRH**

The spring preload adjuster is located at the top of each fork.

1. **Adjuster screw**

To change the spring preload:
- Rotate the adjuster screw clockwise to increase, or counter-clockwise to decrease.
• Always count the number of clockwise turns from the fully counterclockwise position.

**Front Suspension Spring Preload Adjustment**

**Street Triple RS**
The spring preload adjuster is located at the bottom of both front forks.

1. **Front suspension spring preload adjuster (right hand shown)**

To change the preload:
- Rotate the adjuster clockwise to increase, or counter-clockwise to decrease using the Allen key attached to the passenger seat.
- Always count the number of clockwise turns from the fully counterclockwise position.

**Front Suspension Rebound and Compression Damping Adjustment**

**Street Triple R and Street Triple R - LRH**
The rebound and compression damping adjusters are located at the top of the right hand fork.

1. Compression damping adjuster (COM)
2. Rebound damping adjuster (TEN)

To change the rebound damping setting:
- Rotate the TEN slotted adjuster clockwise to increase, or counterclockwise to decrease.
- Always count the number of turns from the fully clockwise position.

To change the compression damping setting:
- Rotate the COM slotted adjuster clockwise to increase, or counterclockwise to decrease.
- Always count the number of turns from the fully clockwise position.
Front Suspension Rebound and Compression Damping Adjustment

Street Triple RS

The rebound and compression damping adjusters are located at the top of each fork.

1. Compression damping adjusters
2. Rebound damping adjusters

To change the rebound damping setting:
- Rotate the TEN slotted adjuster clockwise to increase, or counterclockwise to decrease.
- Always count the number of turns from the fully clockwise position.

To change the compression damping setting:
- Rotate the COM slotted adjuster clockwise to increase, or counterclockwise to decrease.
- Always count the number of turns from the fully clockwise position.

Rear Suspension

**Warning**

Make sure that the correct balance between front and rear suspension is maintained.

Suspension imbalance could significantly change handling characteristics leading to loss of control and an accident.

Refer to the table for further information or consult your authorized Triumph dealer.

Rear Suspension Settings

The motorcycle is delivered from the factory with all the suspension settings set at the Road (Solo Riding) setting as shown in the relevant suspension tables. The Road suspension settings provide a comfortable ride and good handling characteristics for general, solo riding.

Rear Suspension Spring Preload Adjustment

Street Triple R - LRH

The spring preload adjuster is located at the top of the rear suspension unit.

1. Peg
2. Position 1 (minimum adjustment)
3. Adjustment tool

To change the spring preload setting:
- Insert the adjustment tool supplied in the tool kit into the slot in the adjuster ring.
- Turn the adjuster ring counterclockwise to increase spring preload, and clockwise to decrease spring preload.
- Adjuster settings are counted from position one with position one being with the adjuster turned fully clockwise. Position one gives the minimum amount of spring preload.

Rear Suspension Spring Preload Adjustment

Street Triple S (40.2 cu in (660 cc))

The spring preload adjuster is located at the top of the rear suspension unit.

To change the spring preload setting:
- Insert the adjustment tool supplied in the tool kit into the slot in the adjuster ring.
- Turn the adjuster ring counterclockwise to increase spring preload, and clockwise to decrease spring preload.
- When delivered from the factory, the spring preload adjuster will be set to the Solo Riding position as shown in the suggested suspension settings table.
- Adjuster settings are counted from position one with position one being with the adjuster turned fully clockwise. Position one gives the minimum amount of spring preload.
Rear Suspension Rebound Damping Adjustment

Street Triple R
The rebound damping adjuster is located at the bottom of the rear suspension unit on the left hand side of the motorcycle.

1. Slotted adjuster
To change the rebound damping setting:
- Rotate the slotted adjuster clockwise to increase rebound damping and counter-clockwise to decrease.

Rear Suspension Rebound Damping Adjustment

Street Triple RS
The rebound damping adjuster is located at the bottom of the rear suspension unit on the left hand side of the motorcycle.

1. Adjuster screw
To change the rebound damping setting:
- Rotate the adjuster screw clockwise to increase rebound damping and counter-clockwise to decrease.
Rear Suspension Compression Damping Adjustment

Street Triple R

The compression damping adjuster is situated adjacent to the rear suspension unit reservoir.

1. Slotted adjuster

To adjust the compression damping setting:
• Rotate the slotted adjuster clockwise to increase, or counterclockwise to decrease.

Street Triple R - LRH

The compression damping adjuster is situated adjacent to the rear suspension unit reservoir.

1. Slotted adjuster

To change the compression damping setting:
• Rotate the slotted adjuster clockwise to increase, or counterclockwise to decrease.
Rear Suspension Compression Damping Adjustment

Street Triple RS

The compression damping adjuster is situated adjacent to the rear suspension unit reservoir.

1. Adjuster screw

To adjust the compression damping setting:

- Rotate the adjuster screw clockwise to increase, or counter-clockwise to decrease.

Bank Angle Indicators

**Warning**

Always replace the bank angle indicators before they are worn to their maximum limit.

Use of a motorcycle with bank angle indicators worn beyond the maximum limit will allow the motorcycle to be banked to an unsafe angle.

Banking to an unsafe angle may cause instability, loss of motorcycle control and an accident.

Bank angle indicators are located on the rider’s footrests.

1. Bank angle indicator
2. Maximum wear limit groove

Bank angle indicators must be replaced when they have worn down to the maximum wear limit. The maximum wear limit is shown by a groove on the bank angle indicator.

Regularly check the bank angle indicators for wear.
This model is equipped with tubeless tires, valves and wheel rims. Use only tires marked ‘TUBELESS’ and tubeless valves on rims marked ‘SUITABLE FOR TUBELESS TYRES’.

⚠️ Warning

Do not install tube type tires on tubeless rims.
The bead will not seat and the tires could slip on the rims, causing rapid tire deflation that may result in a loss of motorcycle control and an accident.

Never install an inner tube inside a tubeless tire without the appropriate marking. This will cause friction inside the tire and the resulting heat build-up may cause the tube to burst resulting in rapid tire deflation, loss of motorcycle control and an accident.

Typical Tire Marking - Tubeless Tire

Typical Wheel Marking - Tubeless Tire
Tire Inflation Pressures

⚠️ Warning
Incorrect tire inflation will cause abnormal tread wear and instability problems that may lead to loss of control and an accident.
Under inflation may result in the tire slipping on, or coming off the rim.
Overinflation will cause instability and accelerated tread wear.
Both conditions are dangerous as they may cause loss of control leading to an accident.

Correct inflation pressure will provide maximum stability, rider comfort and tire life. Always check tire pressures before riding when the tires are cold. Check tire pressures daily and adjust if necessary. See the Specification section for details of the correct inflation pressures.

Tire Pressure Monitoring System (TPMS) (if equipped)

⚠️ Caution
An adhesive label is installed to the wheel rim to indicate the position of the tire pressure sensor.
Care must be taken when replacing the tires to prevent any damage to the tire pressure sensors.
Always have your tires mounted by your authorized Triumph dealer and inform them that tire pressure sensors are installed on the wheels.

⚠️ Caution
Do not use anti puncture fluid or any other item likely to obstruct air flow to the TPMS sensor’s orifices. Any blockage to the air pressure orifice of the TPMS sensor during operation will cause the sensor to become blocked, causing irreparable damage to the TPMS sensor assembly.
Damage caused by the use of anti puncture fluid or incorrect maintenance is not considered a manufacturing defect and will not be covered under warranty.
Always have your tires mounted by your authorized Triumph dealer and inform them that tire pressure sensors are installed on the wheels.
The tire pressures shown on your instruments indicate the actual tire pressure at the time of selecting the display. This may differ from the inflation pressure set when the tires are cold because tires become warmer during riding, causing the air in the tire to expand and increase the inflation pressure. The cold inflation pressures specified by Triumph take account of this.

Only adjust tire pressures when the tires are cold using an accurate pressure gage. Do not use the tire pressure display on the instruments.

**Tire Wear**

As the tire tread wears down, the tire becomes more susceptible to punctures and failure. It is estimated that 90% of all tire problems occur during the last 10% of tread life (90% worn). It is recommended that tires are changed before they are worn to their minimum tread depth.

---

**Minimum Recommended Tread Depth**

<table>
<thead>
<tr>
<th>Under 80 mph (130 km/h)</th>
<th>0.08 in (2 mm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Over 80 mph (130 km/h)</td>

</tr>
<tr>
<td>Front</td>
<td>0.08 in (2 mm)</td>
</tr>
<tr>
<td>Rear</td>
<td>0.12 in (3 mm)</td>
</tr>
</tbody>
</table>

---

**Warning**

Operation with excessively worn tires is hazardous and will adversely affect traction, stability and handling which may lead to loss of control and an accident.

When tubeless tires, used without a tube, become punctured, leakage is often very slow. Always inspect tires very closely for punctures. Check the tires for cuts, embedded nails or other sharp objects. Operation with punctured or damaged tires will adversely affect motorcycle stability and handling which may lead to loss of control or an accident.

Check the rims for dents or deformation. Operation with damaged or defective wheels or tires is dangerous and loss of motorcycle control or an accident could result.

Always consult your authorized Triumph dealer for tire replacement, or for a safety inspection of the tires.

In accordance with the periodic maintenance chart, measure the depth of the tread with a depth gage, and replace any tire that has worn to, or beyond the minimum allowable tread depth specified in the table below:
Tire Replacement

All Triumph motorcycles are carefully and extensively tested in a range of riding conditions to make sure that the most effective tire combinations are approved for use on each model. It is essential that approved tires and inner tubes (if installed) mounted in approved combinations, are used when purchasing replacement items. The use of non-approved tires and inner tubes, or approved tires and inner tubes in non-approved combinations, may lead to motorcycle instability, loss of control and an accident.

A list of approved tires and inner tubes specific to your motorcycle are available from your authorized Triumph dealer, or on the Internet at www.triumph.co.uk. Always have tires and inner tubes mounted and balanced by your authorized Triumph dealer who has the necessary training and skills to ensure safe, effective installation.

When replacement tires or inner tubes are required, consult your authorized Triumph dealer who will arrange for the tires and inner tubes to be selected, in a correct combination, from the approved list and mounted according to the tire and inner tube manufacturer’s instructions.

Initially, the new tires and inner tubes will not produce the same handling characteristics as the worn tires and inner tubes and the rider must allow adequate riding distance (approximately 100 miles (160 km)) to become accustomed to the new handling characteristics.

24 hours after mounting, the tire pressures must be checked and adjusted, and the tires and inner tubes examined for correct seating. Rectification must be carried out as necessary. The same checks and adjustments must also be carried out when 100 miles (160 km) have been traveled after mounting.

---

**Warning**

Inner tubes must only be used on motorcycles equipped with spoked wheels and with tires marked ‘TUBE TYPE’.

Some brands of approved tires marked ‘TUBELESS’ may be suitable for use with an inner tube. Where this is the case, the tire wall will be marked with text permitting the installation of an inner tube.

Use of an inner tube with a tire marked ‘TUBELESS’, and NOT marked as suitable for use with an inner tube, or use of an inner tube on an alloy wheel marked ‘SUITABLE FOR TUBELESS TYRES’ will cause deflation of the tire resulting in loss of motorcycle control and an accident.

</tbody>
</table>
### Warning

Tires and inner tubes that have been used on a rolling road dynamometer may become damaged. In some cases, the damage may not be visible on the external surface of the tire. Tires and inner tubes must be replaced after such use as continued use of a damaged tire or inner tube may lead to instability, loss of motorcycle control and an accident.

---

### Battery

#### Warning

The battery contains sulfuric acid (battery acid). Contact with skin or eyes may cause severe burns. Wear protective clothing and a face shield.

- If battery acid gets on your skin, flush with water immediately.
- If battery acid gets in your eyes, flush with water for at least 15 minutes and SEEK MEDICAL ATTENTION IMMEDIATELY.
- If battery acid is swallowed, drink large quantities of water and SEEK MEDICAL ATTENTION IMMEDIATELY.
- KEEP BATTERY ACID OUT OF THE REACH OF CHILDREN.

---

#### Warning

Under certain circumstance the battery may release explosive gases. Make sure to keep all sparks, flames and cigarettes away from the battery.

- Do not attach jump leads to the battery, touch the battery cables together or reverse the polarity of the cables, as any of these actions may cause a spark which would ignite battery gases causing a risk of personal injury.
- Make sure that there is adequate ventilation when charging or using the battery in an enclosed space.
Maintenance

### Battery Removal

**Warning**

The battery contains harmful materials. Always keep children away from the battery at all times.

**Battery Removal**

**Warning**

Make sure that the battery terminals do not touch the motorcycle frame. This may cause a short circuit or spark which would ignite battery gases causing a risk of personal injury.

1. **Battery**
2. **Positive (red) terminal**
3. **Negative (black) terminal**
4. **Battery strap**

To remove the battery:

- Remove the passenger and rider’s seats, (see page 104).
- Remove the battery strap.
- Disconnect the battery leads, negative (black) lead first and then the positive lead.

- Remove the battery from its housing.

**Battery Disposal**

Should the battery ever require replacement, the original battery must be handed to a recycling agent who will make sure that the dangerous substances from which the battery is manufactured do not pollute the environment.

**Battery Maintenance**

**Warning**

Battery acid is corrosive and poisonous and will cause damage to unprotected skin.

Never swallow battery acid or allow it to come into contact with the skin.

To prevent injury, always wear eye and skin protection when handling the battery.

The battery is a sealed type and does not require any maintenance other than checking the voltage and routine recharging when required, such as during storage.

Clean the battery using a clean, dry cloth. Make sure that the cable connections are clean.

It is not possible to adjust the battery acid level in the battery; the sealing strip must not be removed.
Battery Discharge

⚠️ Caution

The charge level in the battery must be maintained to maximize battery life. Failure to maintain the battery charge level could cause serious internal damage to the battery.

Under normal conditions, the motorcycle charging system will keep the battery fully charged. However, if the motorcycle is unused, the battery will gradually discharge due to a normal process called self discharge: the clock, Engine Control Module (ECM) memory, high ambient temperatures, or the addition of electrical security systems or other electrical accessories will all increase this rate of battery discharge. Disconnecting the battery from the motorcycle during storage will reduce the rate of discharge.

Battery Discharge During Storage and Infrequent Use of the Motorcycle

During storage or infrequent use of the motorcycle, inspect the battery voltage weekly using a multimeter. Follow the manufacturer’s instructions supplied with the meter.

Should the battery voltage fall below 12.7 Volts, the battery should be charged.

Allowing a battery to discharge or leaving it discharged for even a short period of time causes sulphation of the lead plates. Sulphation is a normal part of the chemical reaction inside the battery, however over time the sulphate can crystallize on the plates making recovery difficult or impossible. This permanent damage is not covered by the motorcycle warranty, as it is not due to a manufacturing defect.

Keeping the battery fully charged reduces the likelihood of it freezing in cold conditions. Allowing a battery to freeze will cause serious internal damage to the battery.

Battery Charging

⚠️ Warning

The battery gives off explosive gases; keep sparks, flames and cigarettes away. Provide adequate ventilation when charging or using the battery in an enclosed space.

The battery contains sulfuric acid (battery acid). Contact with skin or eyes may cause severe burns. Wear protective clothing and a face shield.

If battery acid gets on your skin, flush with water immediately.

If battery acid gets in your eyes, flush with water for at least 15 minutes and SEEK MEDICAL ATTENTION IMMEDIATELY.

If battery acid is swallowed, drink large quantities of water and SEEK MEDICAL ATTENTION IMMEDIATELY.

KEEP BATTERY ACID OUT OF THE REACH OF CHILDREN.
Caution
Do not use an automotive quick charger as it may overcharge and damage the battery.

For help with selecting a battery charger, checking the battery voltage or battery charging, contact your local authorized Triumph dealer.

Should the battery voltage fall below 12.7 Volts, the battery should be charged using a Triumph approved battery charger. Always remove the battery from the motorcycle and follow the instructions supplied with the battery charger.

For extended periods of storage (beyond two weeks) the battery should be removed from the motorcycle and kept charged using a Triumph approved maintenance charger.

Similarly, should the battery charge fall to a level where it will not start the motorcycle, remove the battery from the motorcycle before charging.

Warning
Make sure that the battery terminals do not touch the motorcycle frame. This may cause a short circuit or spark which would ignite battery gases causing a risk of personal injury.

1. Battery
2. Positive (red) terminal
3. Negative (black) terminal
4. Battery strap

To install the battery:

- Position the battery into its housing.
- Reconnect the battery, positive (red) lead first and then the negative lead.
- Tighten the battery terminals to 40 lbf in (4.5 Nm).
- Apply a light coat of grease to the terminals to prevent corrosion.
- Cover the positive terminal with the protective cap.
- Reinstall the battery strap.
- Re-install the rider and passenger seat.
Fuses

⚠️ Warning

Always replace blown fuses with new ones of the correct rating (as specified on the fuse box cover) and never use a fuse of higher rating. Use of an incorrect fuse could lead to an electrical problem, resulting in motorcycle damage, loss of motorcycle control and an accident.

Note

A blown fuse is indicated when all of the systems protected by that fuse become inoperative. When checking for a blown fuse, use the tables to establish which fuse has blown.

The fuse boxes are located underneath the rider’s seat. To allow access to the fuse boxes, the rider’s seat must be removed (see page 104).

---

Fuse Identification

Spare fuses are located on the inside of the fuse box cover and should be replaced if used.

Headlights

⚠️ Warning
Adjust road speed to suit the visibility and weather conditions in which the motorcycle is being operated.
Make sure that the head light beam is adjusted to illuminate the road surface sufficiently far ahead without blinding oncoming traffic.
An incorrectly adjusted headlight may impair visibility causing an accident.

⚠️ Warning
Never attempt to adjust a headlight beam when the motorcycle is in motion.
Any attempt to adjust a headlight beam when the motorcycle is in motion may result in loss of control and an accident.

⚠️ Caution
Do not cover the headlight or lens with any item likely to obstruct air flow to, or prevent heat escaping from, the headlight lens.
Covering the headlight lens during operation with items of clothing, luggage, adhesive tape, devices intended to alter or adjust the headlight beam or non genuine headlight lens covers will cause the headlight lens to overheat and distort, causing irreparable damage to the headlight assembly.
Damage caused by overheating is not considered a manufacturing defect and will not be covered under warranty.
If the headlight must be covered during use - such as taping of the headlight lens required during closed-course conditions - the headlight must be disconnected.
Maintenance

Headlight Adjustment
The vertical beams of the left and right hand headlights can only be adjusted together. Independent adjustment is not possible.

1. Headlight bracket bolts
2. Front subframe alignment marks
3. Headlight bracket mark

To vertically adjust the headlights:
• Switch the ignition on. The engine does not need to be running.
• Switch the headlight dipped beam on.
• Loosen the two headlight bracket bolts securing the headlight bracket to the front subframe sufficiently to allow restricted movement of the headlights.
• Using the headlight bracket mark and the alignment markings on the front subframe, adjust the position of the headlights to give the required beam setting. Each alignment mark on the subframe represents 1°.
• Moving the headlight bracket forwards moves the headlight upwards. Moving the headlight bracket rearwards moves the headlights downwards.

• Tighten the headlight bracket bolts to 62 lbf in (7 Nm).
• Recheck the headlight beam settings.
• Switch the headlights off when the beam settings are satisfactorily set.

Headlight Replacement
The headlight unit is a sealed, maintenance free LED unit. The headlight unit must be replaced in the event of the failure of the headlight.
**Maintenance**

**Brake/Tail Light**
The LED brake/tail light units are sealed, maintenance free LED units. The brake/tail light assembly must be replaced in the event of the failure of the brake/tail light.

**License Plate Light**

**Bulb Replacement**

1. Fastener
2. Lens
3. Bulb

To replace the license plate light bulb:
- Loosen the fastener and remove the lens of the license plate light.
- Replace the bulb.
- Re-install the lens and tighten the fastener to 9 lbf in (1 Nm).

Cleaning and Storage

Cleaning
Frequent, regular cleaning is an essential part of the maintenance of your motorcycle. If regularly cleaned, the appearance will be preserved for many years.

Cleaning with cold water containing an automotive cleaner is essential at all times but particularly so after exposure to sea breezes, sea water, dusty or muddy roads and in winter when roads are treated for ice and snow.

Do not use household detergent, as the use of such products will lead to premature corrosion.

Although, under the terms of your motorcycle warranty, cover is provided against the corrosion of certain items, the owner is expected to observe this reasonable advice which will safeguard against corrosion and enhance the appearance of the motorcycle.

Preparation for Washing
Before washing, precautions must be taken to keep water off the following places.

Rear opening of the exhausts: Cover with a plastic bag secured with rubber bands.

Clutch and brake levers, switch housings on the handlebar: Cover with plastic bags.

Ignition switch and steering lock: Cover the keyhole with tape.

Remove any items of jewelry such as rings, watches, zips or belt buckles, which may scratch or otherwise damage painted or polished surfaces.

Use separate cleaning sponges or cleaning cloths for washing painted/polished surfaces and chassis areas. Chassis areas (such as wheels and under fenders) will be exposed to more abrasive road grime and dust, which may then scratch painted or polished surfaces, if the same sponge or cleaning cloths are used.
Cleaning and Storage

Where to be Careful

⚠️ Caution
Do not use high pressure spray washers or steam cleaners.
Use of high pressure spray washers and steam cleaners may damage seals, and cause water and steam to be forced into bearings and other components causing premature wear from corrosion and loss of lubrication.

⚠️ Caution
Do not spray any water at all near the air intake duct.
The air intake duct is normally located under the rider’s seat, under the fuel tank or near the steering head.
Any water sprayed in this area could enter the airbox and engine, causing damage to both items.

Do not get water near the following places:
- Air intake duct
- Any visible electrical components
- Brake cylinders and brake calipers
- Handlebar switch housings
- Steering head bearings
- Instruments
- Oil filler cap
- Rear bevel box breather (if equipped)
- Rear of headlights
- Seats
- Suspension seals and bearings
- Under the fuel tank

Note
Use of soaps that are highly alkaline will leave a residue on painted surfaces, and may also cause water spotting.
Always use a low alkaline soap to aid the cleaning process.
Cleaning and Storage

Washing
To wash the motorcycle, do the following:

• Make sure that the motorcycle engine is cold.
• Prepare a mixture of clean, cold water and mild automotive cleaner. Do not use a highly alkaline soap as commonly found at commercial car washes because it leaves a residue.
• Wash the motorcycle with a sponge or soft cloth. Do not use abrasive scouring pads or steel wool. They will damage the finish.
• Rinse the motorcycle thoroughly with clean, cold water.

After Washing

⚠️ Warning
Never wax or lubricate the brake discs. Always clean the brake disc with a proprietary brand of oil-free brake disc cleaner. Waxed or lubricated brake discs may cause loss of braking power and an accident.

After washing the motorcycle, do the following:
1. Remove the plastic bags and tape, and clear the air intakes.
2. Lubricate the pivots, bolts and nuts.
3. Test the brakes before motorcycle operation.
4. Use a dry cloth or chamois leather to absorb water residue. Do not allow water to stand on the motorcycle as this will lead to corrosion.
5. Start the engine and run it for 5 minutes. Make sure that there is adequate ventilation for the exhaust fumes.
Cleaning and Storage

Care of Gloss Paintwork
Gloss paintwork should be washed and dried as described previously, then protected using a high quality automotive polish. Always follow the manufacturer’s instructions and repeat regularly to maintain your motorcycle’s appearance.

Care of Matt Paintwork
Matt paintwork requires no greater care than that already recommended for high gloss paintwork.
- Do not use any polish or wax on matt paintwork.
- Do not try and polish out scratches.

Aluminum Items - not Lacquered or Painted
Items such as brake and clutch levers, wheels, engine covers, engine cooling fins, upper and lower yokes and throttle bodies on some models must be correctly cleaned to preserve their appearance. Please contact your dealer if you are unsure which components on your motorcycle are aluminum parts not protected by paint or lacquer, and for guidance on how to clean those items.
Use a proprietary brand of aluminum cleaner which does not contain abrasive or caustic elements.
Clean aluminum items regularly, in particular after use in inclement weather, where the components must be hand washed and dried each time the machine is used.
Warranty claims due to inadequate maintenance will not be allowed.
**Cleaning and Storage**

### Cleaning of Chrome and Stainless Steel Items

All chrome and stainless steel parts of your motorcycle must be cleaned regularly to avoid a deterioration of its appearance.

**Washing**
Wash as previously described.

**Drying**
Dry the chrome and stainless steel parts as far as possible with a soft cloth or chamois leather.

**Protecting**

![Caution]

| The use of products containing silicone will cause discoloration of the chrome and stainless steel parts and must not be used. |
| The use of abrasive cleaning products will damage the finish and must not be used. |

When the chrome and stainless steel is dry, apply a suitable proprietary chrome cleaner on to the surface, following the manufacturer’s instructions.

It is recommended that regular protection be applied to the motorcycle as this will both protect and enhance its appearance.

### Black Chrome

Items such as headlight bowls and mirrors on some models must be correctly cleaned to preserve their appearance. Please contact your dealer if you are unsure which components on your motorcycle are black chrome parts. Maintain the appearance of black chrome items by rubbing a small amount of light oil into the surface.
Cleaning of the Exhaust System

All parts of the exhaust system of your motorcycle must be cleaned regularly to avoid a deterioration of its appearance. These instructions can be applied to chrome, brushed stainless steel and carbon fiber components; matt painted exhaust systems should be cleaned as above, noting the care instructions in the Matt Paintwork section previously.

Note

The exhaust system must be cool before washing to prevent water spotting.

Washing

Wash as previously described.
Make sure that no soap or water enters the exhausts.

Drying

Dry the exhaust system as far as possible with a soft cloth or chamois leather. Do not run the engine to dry the system or spotting will occur.

Protecting

When the exhaust system is dry, apply a suitable proprietary motorcycle protection spray onto the surface, following the manufacturer’s instructions.

It is recommended that regular protection be applied to the system as this will both protect and enhance the system’s appearance.

Caution

The use of products containing silicone will cause discoloration of the chrome and stainless steel parts and must not be used.

The use of abrasive cleaning products will damage the finish and must not be used.
Cleaning and Storage

Seat Care

**Caution**

Use of chemicals or high pressure spray washers is not recommended for cleaning the seat.

Using chemicals or high pressure spray washers may damage the seat cover.

To help maintain its appearance, clean the seat using a sponge or cleaning cloth with soap and water.

Windshield Cleaning (if equipped)

**Warning**

Never attempt to clean the windshield while the motorcycle is in motion as releasing the handlebars may cause loss of motorcycle control and an accident.

Operation of the motorcycle with a damaged or scratched windshield will reduce the rider’s forward vision. Any such reduction in forward vision is dangerous and may lead to loss of motorcycle control and an accident.

**Caution**

Corrosive chemicals such as battery acid will damage the windshield. Never allow corrosive chemicals to contact the windshield.

**Caution**

Products such as window cleaning fluids, insect remover, rain repellent, scouring compounds, gasoline or strong solvents such as alcohol, acetone, carbon tetrachloride, etc. will damage the windshield.

Never allow these products to contact the windshield.
Cleaning and Storage

Clean the windshield with a solution of mild soap or detergent and clean, cold water.

After cleaning, rinse well and then dry with a soft, lint-free cloth.

If the transparency of the windshield is reduced by scratches or oxidation which cannot be removed, the windshield must be replaced.

Care of Leather Products

It is recommend that the leather products are periodically cleaned with a damp cloth and allowed to dry naturally at room temperature. This will maintain the appearance of the leather and ensure the long life of the product.

The Triumph leather product is a natural product and lack of care can result in damage and permanent wear.

Follow these simple instructions to prolong the life of the leather product:

• Do not use household cleaning products, bleach, detergents containing bleach or any kind of solvent to clean the leather product.
• Do not immerse the leather product in water.
• Avoid direct heat from fires and radiators which can dry out and distort the leather.
• Do not leave the leather product in direct sunlight for prolonged periods of time.
• Do not dry the leather product by applying direct heat to it at any time.
• If the leather product does get wet, absorb any excess water with a soft clean cloth then leave the leather product to dry naturally at room temperature.
• Avoid exposure of the leather product to high levels of salt, for example sea/salt water or road surfaces that have been treated during the winter for ice and snow.
Cleaning and Storage

• If exposure to salt is unavoidable, clean the leather product immediately after each exposure using a damp cloth then leave the leather product to dry naturally at room temperature.
• Gently clean any minor marks with a damp cloth then leave the leather product to dry naturally at room temperature.
• Place the leather product in a fabric bag or cardboard box to protect it when in storage. Do not use a plastic bag.

Storage

Preparation for Storage
To prepare the motorcycle for storage, do the following:
• Clean and dry the entire vehicle thoroughly.
• Fill the fuel tank with the correct grade of unleaded fuel and add a fuel stabilizer (if available), following the fuel stabilizer manufacturer’s instructions.

⚠️ Warning
Gasoline is extremely flammable and can be explosive under certain conditions.
Turn the ignition switch off. Do not smoke.
Make sure the area is well ventilated and free from any source of flame or sparks; this includes any appliance with a pilot light.

• Remove the spark plug from each cylinder and put several drops (0.17 fl oz (5 cc)) of engine oil into each cylinder. Cover the spark plug holes with a piece of cloth or rag. With the engine stop switch in the RUN position, push the starter button for a few seconds to coat the cylinder walls with oil. Install the spark plugs, tightening to 9 lbf ft (12 Nm).
• Change the engine oil and filter (see page 136).
• Check and if necessary correct the tire pressures (see the relevant Specification section).
Cleaning and Storage

- Set the motorcycle on a stand so that both wheels are raised off the ground. (If this cannot be done, put boards under the front and rear wheels to keep dampness away from the tires).
- Spray rust inhibiting oil (there are numerous products on the market and your dealer will be able to offer you local advice) on all unpainted metal surfaces to prevent rusting. Prevent oil from getting on rubber parts, brake discs or in the brake calipers.
- Lubricate and if necessary adjust the drive chain (see page 144).
- Make sure the cooling system is filled with a 50% mixture of coolant (noting that HD4X Hybrid OAT coolant, as supplied by Triumph, is pre-mixed and requires no dilution) and distilled water solution (see page 138).
- Remove the battery, and store it where it will not be exposed to direct sunlight, moisture, or freezing temperatures. During storage it should be given a slow charge (one Ampere or less) about once every two weeks (see page 175).
- Store the motorcycle in a cool, dry area, away from sunlight, and with a minimum daily temperature variation.
- Put a suitable porous cover over the motorcycle to keep dust and dirt from collecting on it. Avoid using plastic or similar non-breathable, coated materials that restrict air flow and allow heat and moisture to accumulate.

Preparation after Storage

To prepare the motorcycle to be ridden after storage, do the following:
- Install the battery (if removed) (see page 176).
- If the motorcycle has been stored for more than four months, change the engine oil (see page 136).
- Check all the points listed in the Daily Safety Checks section.
- Before starting the engine, remove the spark plugs from each cylinder.
- Put the side stand down.
- Crank the engine on the starter motor several times.
- Re-install the spark plugs, tightening to 9 lbf ft (12 Nm), and start the engine.
- Check and if necessary correct the tire pressures (see the relevant Specification section).
- Clean the entire vehicle thoroughly.
- Check the brakes for correct operation.
- Test ride the motorcycle at low speeds.

Approval Information

This section contains approval information that is required to be included in this Owner’s Handbook.

FCC Statement

This device complies with part 15 of the Federal Communications Commission (FCC) Rules.
Operation is subject to the following two conditions:
1. This device may not cause harmful interference.
2. This device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications to the device could void the user’s authority to operate the equipment.

Tires

With reference to the Pneumatic Tires and Tubes for Automotive Vehicles (Quality Control) Order, 2009, Cl. No. 3 (c), it is declared by M/s. Triumph Motorcycles Ltd. that the tires mounted on this motorcycle meet the requirements of IS 15627: 2005 and comply with the requirements under Central Motor Vehicle Rules (CMVR), 1989.
