This handbook contains information on the Triumph Tiger 900, Tiger 900 GT, Tiger 900 GT Pro, Tiger 900 GT (LRH), Tiger 900 Rally and Tiger 900 Rally Pro motorcycles. Always store this Owner’s Handbook with the motorcycle and refer to it for information whenever necessary.

The information contained in this publication is based on the latest information available at the time of printing. Triumph reserves the right to make changes at any time without prior notice, or obligation.

Not to be reproduced wholly or in part without the written permission of Triumph Motorcycles Limited.

Publication part number 3855668-US-EN issue 1
### Table of Contents

This handbook contains a number of different sections. The table of contents below will help you find the beginning of each section where, in the case of the major sections, a further table of contents will help you find the specific subject required.

Foreword

Owner’s Handbook

Warning
This Owner’s Handbook, and all other instructions that are supplied with your motorcycle, should be considered a permanent part of your motorcycle and should remain with it even if your motorcycle is subsequently sold.

All riders must read this Owner’s Handbook and all other instructions which are supplied with your motorcycle, before riding, in order to become thoroughly familiar with the correct operation of your motorcycle’s controls, its features, capabilities and limitations.

Do not lend your motorcycle to others as riding when not familiar with your motorcycle’s controls, features, capabilities and limitations can lead to an accident.

Thank you for choosing a Triumph motorcycle. This motorcycle is the product of Triumph’s use of proven engineering, exhaustive testing, and continuous striving for superior reliability, safety and performance.

Please read this Owner’s Handbook before riding in order to become thoroughly familiar with the correct operation of your motorcycle’s controls, its features, capabilities and limitations.

This Owner’s Handbook includes safe riding tips, but does not contain all the techniques and skills necessary to ride a motorcycle safely.

Triumph strongly recommends that all riders undertake the necessary training to ensure safe operation of this motorcycle.

This Owner’s Handbook is available from your local dealer in:

- English
- US English
- Chinese
- Dutch
- French
- German
- Italian
- Japanese
- Portuguese
- Spanish
- Swedish
- Thai.

The languages available for this Owner’s Handbook are dependent on the specific motorcycle model and country.
Foreword

Talk to Triumph

Our relationship with you does not end with the purchase of your Triumph. Your feedback on the buying and ownership experience is very important in helping us develop our products and services for you.

Please help us by ensuring your authorized Triumph dealership has your email address and registers this with us. You will then receive an online customer satisfaction survey invitation to your email address where you can give us this feedback.

Your Triumph Team.

Warnings, Cautions and Notes

Throughout this Owner’s Handbook particularly important information is presented in the following form:

⚠️ Warning

This warning symbol identifies special instructions or procedures, which if not correctly followed could result in personal injury, or loss of life.

⚠️ Caution

This caution symbol identifies special instructions or procedures, which, if not strictly observed, could result in damage to, or destruction of, equipment.

Note

This note symbol indicates points of particular interest for more efficient and convenient operation.

Warning Labels

⚠️

At certain areas of the motorcycle, the symbol (above) can be seen. The symbol means ‘CAUTION: REFER TO THE HANDBOOK’ and will be followed by a pictorial representation of the subject concerned.

Never attempt to ride the motorcycle or make any adjustments without reference to the relevant instructions contained in this handbook.

For more information on the location of all labels showing this symbol, see page 39. Where necessary, this symbol will also appear on the pages containing the relevant information.

Maintenance

To ensure a long, safe and trouble free life for your motorcycle, maintenance should only be carried out by an authorized Triumph dealer.

Only an authorized Triumph dealer will have the necessary knowledge, equipment and skills to maintain your Triumph motorcycle correctly.
To locate your nearest authorized Triumph dealer, visit the Triumph website at www.triumph.co.uk or telephone the authorized distributor in your country. Their address is given in the service record book that accompanies this handbook.

**Off-road Use**

The motorcycles are designed for on-road and light off-road use. Light off-road use includes use on unpaved, dirt or gravel roads, but does not include riding on any motocross course, any off-road competition (such as motocross or enduro riding), or riding off-road with a passenger.

Light off-road use does not include jumping the motorcycle or riding over obstacles. Do not attempt to jump over any bumps or obstacles. Do not attempt to ride over any obstacles.

**Noise Control System**

Tampering with the noise control system is prohibited.

Owners are warned that the law may prohibit:

1. The removal or rendering inoperative by any person other than for purposes of maintenance, repair or replacement, of any device or element of design incorporated into any new vehicle for the purpose of noise control prior to its sale or delivery to the ultimate purchaser or while it is in use and,

2. the use of the vehicle after such device or element of design has been removed or rendered inoperative by any person.

Among those acts presumed to constitute tampering are the acts listed below:

- Removal of, or puncturing the muffler, baffles, header pipes or any other component which conducts exhaust gases.
- Removal of or puncturing of any part of the intake system.
- Lack of proper maintenance.
- Replacing any moving parts of the vehicle, or parts of the exhaust or intake system, with parts other than those specified by the manufacturer.

**Tiger 900 GT (LRH) Model**

Unless stated otherwise, the information, instructions, and specifications for Tiger 900 GT (LRH) (Low Ride Height) models are identical to those detailed in this Owner’s Handbook for the Tiger 900 GT standard ride height models.
This page intentionally left blank
Safety First

The Motorcycle

⚠️ Warning

Tiger 900 GT (LRH) (Low Ride Height Model)

The Tiger 900 GT (LRH) motorcycle is equipped with lowered suspension and has reduced ground clearance. As a result, the cornering banking angles that can be achieved by the Tiger 900 GT (LRH) is reduced, when compared with the standard ride height Tiger 900 GT model.

When riding, it is important to remember that your motorcycle’s ground clearance is limited. Operate your motorcycle in an area free from traffic to gain familiarity with the motorcycle’s ground clearance and bank angle limitations.

Banking to an unsafe angle or unexpected contact with the ground may cause instability, loss of motorcycle control and an accident.

⚠️ Warning

The motorcycles are designed for on-road and light off-road use. Light off-road use includes use on unpaved, dirt or gravel roads, but does not include riding on any motocross course, any off-road competition (such as motocross or enduro riding), or riding off-road with a passenger.

Light off-road use does not include jumping the motorcycle or riding over obstacles. Do not attempt to jump over any bumps or obstacles. Do not attempt to ride over any obstacles. Extreme off-road use could lead to loss of motorcycle control and an accident.

⚠️ Warning

This motorcycle is designed for use as a two-wheeled vehicle capable of carrying a rider on their own, or a rider and one passenger.

The total weight of the rider, and any passenger, accessories and luggage must not exceed the maximum load limit as stated in the Specifications section.
Warning
This motorcycle is not designed to tow a trailer or be equipped with a sidecar. Installing a sidecar and/or a trailer may result in loss of control and an accident.

Warning
This motorcycle is equipped with a catalytic converter below the engine, which along with the exhaust system reaches a very high temperature during engine operation. Flammable materials such as grass, hay/straw, leaves, clothing and luggage etc. could ignite if allowed to come into contact with any part of the exhaust system and catalytic converter. Always make sure flammable materials are not allowed to contact the exhaust system or catalytic converter.

Warning
Riding the motorcycle off-road may result in loosening of the spokes. Make sure that the spokes are checked before and after riding the motorcycle off-road. Tighten any loose spokes and check for wheel rim damage. Spokes that are loose may affect handling and stability resulting in motorcycle damage, loss of motorcycle control and an accident.

Warning
Check the wheel rims and spokes regularly for wear and damage. Check spoke tension at all intervals listed in the maintenance schedule. Tighten any loose spokes. Incorrectly tightened spokes may affect handling and stability resulting in motorcycle damage, loss of motorcycle control and an accident.

Caution
Riding the motorcycle in extreme conditions such as wet and muddy roads, on rough terrain or in dusty and humid environments, may lead to above average wear and damage of certain components. Therefore the servicing and replacement of worn or damaged components may be necessary before the scheduled maintenance service is reached. It is important that the motorcycle is inspected after riding in extreme conditions and any worn or damaged components are serviced or replaced.
Fuel and Exhaust Fumes

**Warning**

GASOLINE IS HIGHLY FLAMMABLE:
Always turn off the engine when refueling.
Do not refuel or open the fuel filler cap while smoking or in the vicinity of any open (naked) flame.
Take care not to spill any gasoline on the engine, exhaust pipes or mufflers when refueling.
If gasoline is swallowed, inhaled or allowed to get into the eyes, seek immediate medical attention.
Spillage on the skin should be immediately washed off with soap and water and clothing contaminated with gasoline should immediately be removed.
Burns and other serious skin conditions may result from contact with gasoline.

**Warning**

Never start the engine or run the engine in a confined area.
Exhaust fumes are poisonous and can cause loss of consciousness and death within a short period of time.
Always operate the motorcycle in the open air or in an area with adequate ventilation.

Helmet and Clothing

**Warning**

When riding the motorcycle, both rider and passenger (on models where carrying a passenger is permitted) must always wear appropriate clothing including a motorcycle helmet, eye protection, gloves, boots, trousers (close fitting around the knee and ankle) and a brightly colored jacket.
During off-road use (on models suitable for off-road use), the rider must always wear appropriate clothing including trousers and boots.
Brightly colored clothing will considerably increase a rider’s (or passenger’s) visibility to other operators of road vehicles.
Although full protection is not possible, wearing correct protective clothing can reduce the risk of injury when riding.
A helmet is one of the most important pieces of riding gear as it offers protection against head injuries. You and your passenger’s helmet should be carefully chosen and should fit you or your passenger’s head comfortably and securely. A brightly colored helmet will increase a rider’s (or passenger’s) visibility to other operators of road vehicles.

An open face helmet offers some protection in an accident though a full face helmet will offer more.

Always wear a visor or approved goggles to help vision and to protect your eyes.

When choosing a helmet, always look for a DOT (Department of Transport) sticker indicating that the helmet has DOT approval. Do not buy a helmet without DOT approval.

Never ride the motorcycle when fatigued or under the influence of alcohol or other drugs.

Riding when under the influence of alcohol or other drugs is illegal.

Riding when fatigued or under the influence of alcohol or other drugs reduces the rider’s ability to maintain control of the motorcycle and may lead to loss of control and an accident.

All riders must be licensed to operate the motorcycle.

Operation of the motorcycle without a license is illegal and could lead to prosecution.

Operation of the motorcycle without formal training in the correct riding techniques that are necessary to become licensed is dangerous and may lead to loss of motorcycle control and an accident.

Always ride defensively and wear the protective equipment mentioned elsewhere in this foreword.

Remember, in an accident, a motorcycle does not give the same impact protection as a car.
Warning

This Triumph motorcycle should be operated within the legal speed limits for the particular road traveled.

Operating a motorcycle at high speeds can be potentially dangerous since the time available to react to given traffic situations is greatly reduced as road speed increases.

Always reduce speed in potentially hazardous driving conditions such as bad weather or heavy traffic.

Warning

Continually observe and react to changes in road surface, traffic and wind conditions. All two-wheeled vehicles are subject to external forces which may cause an accident. These forces include but are not limited to:

- Wind draft from passing vehicles
- Potholes, uneven or damaged road surfaces
- Bad weather
- Rider error.

Always operate the motorcycle at moderate speed and away from heavy traffic until you have become thoroughly familiar with its handling and operating characteristics. Never exceed the legal speed limit.

Wobble/Weave

A weave is a relatively slow oscillation of the rear of the motorcycle, while a wobble is a rapid, possibly strong shaking of the handlebar. These are related but distinct stability problems usually caused by excessive weight in the wrong place, or by a mechanical problem such as worn or loose bearings or under-inflated or unevenly worn tires.

Your solution to both situations is the same. Keep a firm hold on the handlebars without locking arms or fighting the steering. Smoothly ease off the throttle to slow gradually. Do not apply the brakes, and do not accelerate to try to stop the wobble or weave. In some cases, it helps to shift your body weight forward by leaning over the tank.

Handlebars and Footrests

**Warning**

The rider must maintain control of the motorcycle by keeping hands on the handlebars at all times. The handling and stability of a motorcycle will be adversely affected if the rider removes their hands from the handlebars, resulting in loss of motorcycle control and an accident.

**Warning**

The rider and passenger (if applicable) must always use the footrests provided, during operation of the motorcycle. By using the footrests, both rider and passenger will reduce the risk of inadvertent contact with any motorcycle components and will also reduce the risk of injury from entrapment of clothing.

**Warning**

The bank angle indicators must not be used as a guide to how far the motorcycle may be safely banked. This depends on many various conditions including, but not limited to, road surface, tire condition and weather. Banking to an unsafe angle may cause instability, loss of motorcycle control and an accident.

---

**Warning**

Always replace the bank angle indicators before they are worn to their maximum limit. Use of a motorcycle with bank angle indicators worn beyond the maximum limit will allow the motorcycle to be banked to an unsafe angle. Banking to an unsafe angle may cause instability, loss of motorcycle control and an accident.

**Warning**

When banking and the bank angle indicator, attached to the rider’s footrest, makes contact with the ground, the motorcycle is nearing its bank angle limit. A further increase of the banking angle is unsafe. Banking to an unsafe angle may cause instability, loss of motorcycle control and an accident.

1. Bank angle indicator
2. Maximum wear limit groove
Parking

⚠️ Warning
Always switch off the engine and remove the ignition key before leaving the motorcycle unattended. By removing the key, the risk of use of the motorcycle by unauthorized or untrained persons is reduced.

When parking the motorcycle, always remember the following:
- Engage first gear to help prevent the motorcycle from rolling off the stand.
- The engine and exhaust system will be hot after riding. DO NOT park where pedestrians, animals and/or children are likely to touch the motorcycle.
- Do not park on soft ground or on a steeply inclined surface. Parking under these conditions may cause the motorcycle to fall over.

For further details, please refer to the 'How to Ride the Motorcycle' section of this Owner’s Handbook.

Parts and Accessories

⚠️ Warning
Owners should be aware that the only approved parts, accessories and conversions for any Triumph motorcycle are those which carry official Triumph approval and are installed to the motorcycle by an authorized dealer.

In particular, it is extremely hazardous to install or replace parts or accessories whose installation requires the dismantling of, or addition to, either the electrical or fuel systems and any such modification could cause a safety hazard.

The installation of any non-approved parts, accessories or conversions may adversely affect the handling, stability or other aspect of the motorcycle operation that may result in an accident causing injury or death.

Triumph does not accept any liability whatsoever for defects caused by the installation of non-approved parts, accessories or conversions or the installation of any approved parts, accessories or conversions by non-approved personnel.

Triumph does not accept any liability whatsoever for defects caused by the installation of non-approved parts, accessories or conversions or the installation of any approved parts, accessories or conversions by non-approved personnel.
Safety First

Maintenance and Equipment

⚠️ Warning
Consult your authorized Triumph dealer whenever there is doubt as to the correct or safe operation of this Triumph motorcycle.
Remember that continued operation of an incorrectly performing motorcycle may aggravate a fault and may also compromise safety.

⚠️ Warning
Make sure all equipment that is required by law is installed and functioning correctly.
The removal or alteration of the motorcycle’s lights, mufflers, emission or noise control systems can violate the law.
Incorrect or improper modification may adversely affect the handling, stability or other aspect of the motorcycle operation, which may result in an accident causing injury or death.

⚠️ Warning
If the motorcycle is involved in an accident, collision or fall, it must be taken to an authorized Triumph dealer for inspection and repair.
Any accident can cause damage to the motorcycle that, if not correctly repaired, may cause a second accident that may result in injury or death.
This page intentionally left blank
Warning Labels

Warning Label Locations

The labels detailed on this and the following pages draw your attention to important safety information in this handbook. Before riding, make sure that all riders have understood and complied with all the information to which these labels relate.

1. Headlight (page 170)
2. Windshield (page 182)
3. Breaking-In (page 98)
4. Mud and Snow Tires (page 187)
5. Panniers (if equipped) (page 113)
6. Tires (page 156)
7. Drive Chain (page 135)
8. Gear Position (page 104)
Warning Label Locations (continued)

**Caution**

All warning labels and decals, with the exception of the Breaking-in label, are mounted on the motorcycle using a strong adhesive. In some cases, labels are installed prior to an application of paint lacquer. Therefore, any attempt to remove the warning labels will cause damage to the paintwork or bodywork.

17. Horn button
18. Daytime Running Lights (DRL) (if equipped)
19. Heated grips switch (if equipped)
Serial Numbers

Vehicle Identification Number (VIN)

1. Vehicle identification number (right hand side)

The Vehicle Identification Number (VIN) is stamped into the steering head area of the frame. It is also displayed on a label attached to the left hand side of the steering head.

1. Vehicle identification label (left hand side)

Record the vehicle identification number in the space provided below.

Engine Serial Number

1. Engine serial number

The engine serial number is stamped on the engine crankcase, immediately above the clutch cover.

Record the engine serial number in the space provided below.

Hand Controls

Ignition Switch/Steering Lock

⚠️ Warning
For reasons of security and safety, always turn the ignition to the OFF or LOCK position and remove the key when leaving the motorcycle unattended.
Any unauthorized use of the motorcycle may cause injury to the user, other road users and pedestrians and may also cause damage to the motorcycle.

⚠️ Warning
With the key in the LOCK position, the steering will become locked.
Never turn the key to the LOCK position while the motorcycle is moving as this will cause the steering to lock. Locked steering will cause loss of motorcycle control and an accident.

Ignition Switch Positions
This is a three position, key operated switch. The key can be removed from the switch only when it is in the OFF or LOCK position.

To lock the motorcycle:
- Turn the handlebar fully to the left.
- Turn the key to the OFF position.
- Push and fully release the key.
- Rotate it to the LOCK position.
General Information

Engine Immobilizer
The ignition barrel housing acts as the antenna for the engine immobilizer. When the ignition switch is turned to the OFF position and the ignition key is removed, the engine immobilizer is active (see page 40). The engine immobilizer is deactivated when the ignition key is in the ignition switch and it is turned to the ON position.

Ignition Key

⚠️ Warning
Additional keys, key rings/chains or items attached to the ignition key may interfere with the steering, leading to loss of motorcycle control and an accident.

Remove all additional keys, key rings/chains and items from the ignition key before riding the motorcycle.

⚠️ Caution
Additional keys, key rings/chains or items attached to the ignition key may cause damage to the motorcycle’s painted or polished components.

Remove all additional keys, key rings/chains and items from the ignition key before riding the motorcycle.

⚠️ Caution
Do not store the spare key with the motorcycle as this will reduce all aspects of security.

1. Key number tag
In addition to operating the ignition switch/steering lock, the ignition key is required to operate the seat lock and fuel tank cap.

When the motorcycle is delivered from the factory, two ignition keys are supplied together with a small tag bearing the key number. Make a note of the key number and store the spare key and key number tag in a safe place away from the motorcycle.

There is a transponder within the ignition keys to turn off the engine immobilizer. To make sure the immobilizer functions correctly, always have only one of the ignition keys near the ignition switch. Having two ignition keys near the switch may interrupt the signal between the transponder and the engine immobilizer. In this situation the engine immobilizer will remain active until one of the ignition keys is removed.
Always get replacement keys from your authorized Triumph dealer. Replacement keys must be 'paired' with the motorcycle’s immobilizer by your authorized Triumph dealer.

**Right Handlebar Switches**
The switches are illuminated on Tiger 900 GT Pro and Tiger 900 Rally Pro.

1. **HOME button**
2. **Engine start/stop switch**
3. **START position**
4. **RUN position**
5. **STOP position**
6. **Hazard warning lights switch**

The following sections describe the handlebar buttons and switches functions.

**HOME Button**
The HOME button is used to access the main menu on the instrument display.
Press and release the HOME button to select between the main menu and instrument display.

**Engine Stop Switch**
In addition to the ignition switch being turned to the ON position, the engine stop switch must be in the RUN position for the motorcycle to operate.
The engine stop switch is for emergency use. If an emergency arises which requires the engine to be stopped, move the engine stop switch to the STOP position.

**Note**
Although the engine stop switch stops the engine, it does not turn off all the electrical circuits and may cause difficulty in restarting the engine due to a discharged battery. Ordinarily, only the ignition switch should be used to stop the engine.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not leave the ignition switch in the ON position unless the engine is running as this may cause damage to electrical components and will discharge the battery.</td>
</tr>
</tbody>
</table>

**Starter Button**
The starter button operates the electric starter. For the starter to operate, the clutch lever must be pulled to the handlebar.

**Note**
Even if the clutch lever is pulled to the handlebar, the starter will not operate if the side stand is down and a gear is engaged.
General Information

Hazard Warning Lights Button
To turn the hazard warning lights on or off, press and release the hazard warning light button.

The ignition must be switched on for the hazard warnings lights to be activated, but the hazard lights will remain active if the ignition is switched off until the hazard warning light button is pressed again.

Left Handlebar Switches
The switches are illuminated on Tiger 900 GT Pro and Tiger 900 Rally Pro.

1. Cruise control adjust switch (if equipped)
2. Daytime Running Lights (DRL) switch (if equipped)
3. MODE button
4. Turn signal switch
5. Joystick button
6. Horn button
7. Heated grips switch (if equipped)
8. Front fog lights switch (if equipped)
9. High beam button
10. Rider heated seat switch (if equipped)

The following sections describe the handlebar buttons and switches functions.

Cruise Control Adjust Switch
The cruise control adjust switch is a two way switch with the top marked RES/+ and the bottom marked SET/-.

For more information on cruise control operation, see page 72.

Daytime Running Lights (DRL) Switch (if equipped)
When the ignition is switched ON and the daytime running lights switch is set to DRL mode, the daytime running lights warning light will illuminate.

The daytime running lights and low beam headlights are operated manually using the DRL switch. Press the top of the switch for DRL mode, and the bottom of the switch for low beam headlight mode.

⚠️ Warning

Do not ride for longer than necessary in poor ambient light conditions with the Daytime Running Lights (DRL) in use.

Riding with the daytime running lights when dark, in tunnels or where poor ambient light is apparent may reduce the riders vision or blind other road users.

Blinding other road users or reduced vision in low ambient light levels may result in loss of motorcycle control and an accident.
**Note**
During daylight hours the daytime running lights improve the motorcycles visibility to other road users.
Low beam headlights must be used in any other conditions unless the road conditions allow for high beam headlights to be used.

**MODE Button**
When the MODE button is pressed and released it will activate the Riding Mode Selection Menu in the display screen. Further presses of the MODE button will scroll through the available riding modes, see Riding Mode Selection on page 51.
Press and hold the MODE button when a riding mode is selected provides direct access to the riding mode’s configuration menu.
For more information on riding mode selection and configuration, see page 55.

**Turn Signal Switch**
When the turn signal switch is pushed to the left or right and released, the corresponding turn signals will flash on and off. To turn off the turn signals, push and release the switch in the central position.

**Automatic Self-Canceling Turn Signals**
A short press and release of the turn signal switch to the left or right will cause the corresponding turn signals to flash on and off three times, then go off.
A longer press and release of the turn signal switch to the left or right will cause the corresponding turn signals to flash on and off.

The turn signals are automatically turned off after eight seconds and after riding a further 71 yards (65 meters).
To disable the turn signal self-cancel system refer to the Bike Setup section on page 57.
The turn signals can be canceled manually. To manually turn off the turn signal, press and release the turn signal switch in the central position.

**Joystick Button**
The Joystick is used to operate the following functions of the instruments:
- Up–scroll the menu from the bottom to the top
- Down–scroll the menu from the top to the bottom
- Left–scroll the menu to the left
- Right–scroll the menu to the right
- Center–press to confirm selection.

**Horn Button**
When the horn button is pushed, with the ignition switch turned to the ON position, the horn will sound.

**Heated Grips Switch**
The heated grips will only heat when the engine is running.
When the heated grips are switched on, the heated grips symbol will appear in the display and the selected heat level will be shown.
General Information

There are three levels of heat: low, medium and high. This is indicated by the different colors of the symbols shown in the display.

1. Low heat symbol (yellow)
2. Medium heat symbol (orange)
3. High heat symbol (red)

For maximum benefit in cold conditions, from the OFF position press the switch once for the high heat setting initially and then reduce the heat level by pressing the switch again for a low heat setting when the grips have warmed up.

To turn off the heated grips, press and release the switch until the heated grips symbol is no longer shown in the display.

Low Power Voltage Cut Off
If a low voltage is detected, the heated grips switch will power off. The heated grips will not function again until the voltage rises to a safe level.

The switch will not power back on automatically even if the voltage rises to the safe level. The user must manually press the switch again to activate the heated grips.

Fog Lights Switch (if equipped)
To turn the fog lights on or off, with the headlights on, press and release the fog lights switch. When the fog lights are turned on, the fog lights indicator will illuminate in the display.

Note
The fog lights switch will only operate when the headlights are on.
The fog lights switch will reset to off when the ignition is turned off then on again.

High Beam Button
The high beam button has a different function depending on whether Daytime Running Lights (DRL) are installed or not. When the high beam is turned on, the high beam indicator light will illuminate in the display.

Models with Daytime Running Lights (DRL)
If the DRL switch is in the Daytime Running Lights (DRL) position, then press and hold the high beam button to turn the high beam on. It will remain on as long as the button is held in and will turn off as soon as the button is released.

If the DRL switch is in the dip beam position, press the high beam button to switch the high beam on. Each press of the button will swap between dip and high beam.

Note
A lighting on/off switch is not installed on this model. The brake/tail light and license plate light all function automatically when the ignition is turned to the ON position.
The headlight will function when the ignition is turned on and the engine is running.
Models without Daytime Running Lights (DRL)

Press the high beam button to switch the high beam on. Each press of the button will swap between dip and high beam.

Note

A lighting on/off switch is not installed on this model. The position light, brake/tail light and license plate light all function automatically when the ignition is turned to the ON position.

The headlight will function when the ignition is turned on and the engine is running.

Rider Heated Seat Switch (if equipped)

The rider heated seat will only heat when the engine is running. When the heated seat is switched on the heated seats symbols will appear in the instrument display. The selected heat level will also be indicated by the color of the symbol.

For more information, see page 91.

Throttle Control

This Triumph model has an electronic throttle twist grip to open and close the throttles via the engine control unit. There are no direct-acting cables in the system.

1. Throttle open position
2. Throttle closed position
3. Cruise control cancel position

The throttle grip has a resistive feel to it as it is rolled rearwards to open the throttles. When the grip is released it will return to the throttle closed position by its internal return spring and the throttles will close.

From the closed position, the throttle twist grip can be rolled forward 0.12–0.16 in (3–4 mm) to deactivate the cruise control (if equipped), see page 73.

There are no user adjustments for the throttle control.

If there is a malfunction with the throttle control the Malfunction Indicator Light (MIL) becomes illuminated and one of the following engine conditions may occur:

• MIL illuminated, restricted engine RPM and throttle movement
General Information

- MIL illuminated, limp-home mode with the engine at a fast idle condition only
- MIL illuminated, engine will not start.

For all of the above conditions contact an authorized Triumph dealer as soon as possible to have the fault checked and rectified.

**Warning**

Reduce speed and do not continue to ride for longer than is necessary with the Malfunction Indicator Light (MIL) illuminated.

The fault may adversely affect engine performance, exhaust emissions and fuel consumption.

Reduced engine performance could cause a dangerous riding condition, leading to loss of control and an accident. Contact an authorized Triumph dealer as soon as possible to have the fault checked and rectified.

Brake Use

At low throttle opening (approximately 68°F (20°C)), the brakes and throttle can be used together.

At high throttle opening (greater than 20°), if the brakes are applied for greater than two seconds the throttles will close and the engine speed will reduce. To return to normal throttle operation, release the throttle control, release the brakes and then reopen the throttle.

Brake Lever Adjuster

**Warning**

Do not attempt to adjust the levers with the motorcycle in motion as this may lead to loss of motorcycle control and an accident.

After adjusting the levers, operate the motorcycle in an area free from traffic to gain familiarity with the new lever setting.

Do not loan your motorcycle to anyone as they may change the lever setting from the one you are familiar with causing loss of motorcycle control and an accident.

An adjuster is mounted to the front brake lever. The adjuster allows the distance from the handlebar to the brake lever to be changed to suit the span of the rider’s hands.

1. Brake lever
2. Adjuster wheel
To adjust the brake lever:
- Rotate the adjuster wheel to the required position.
- The distance from the handlebar grip to the released lever is shortest when the adjuster wheel is turned fully counterclockwise. It is the longest when the adjuster wheel is turned fully clockwise.

**Clutch Lever Adjuster**

- **Warning**

Do not attempt to adjust the levers with the motorcycle in motion as this may lead to loss of motorcycle control and an accident.

After adjusting the levers, operate the motorcycle in an area free from traffic to gain familiarity with the new lever setting.

Do not loan your motorcycle to anyone as they may change the lever setting from the one you are familiar with causing loss of motorcycle control and an accident.

An adjuster is mounted to the clutch lever. The adjuster allows the distance from the handlebar to the clutch lever to be changed to one of four positions to suit the span of the rider’s hands.

1. Arrow mark
2. Adjuster wheel (handguard removed for clarity)

To adjust the clutch lever:
- Push the clutch lever forward and turn the adjuster wheel to align one of the numbered positions with the arrow mark on the lever holder.
- The distance from the handlebar grip to the released clutch lever is shortest when set to number four, and longest when set to number one.
General Information

Instruments

Instrument Displays Overview
Tiger 900 models are equipped with a full color Thin Film Transistor (TFT) digital instrument display with a 5 inch (12.7 cm) screen.

All models except Tiger 900 are equipped with a full color Thin Film Transistor (TFT) digital instrument display with a 7 inch (17.8 cm) screen.

TFT Instrument Display–5 inch (12.7 cm) Screen

TFT Instrument Display–7 inch (17.8 cm) Screen

Not all instrument features are available on all models.
General Information

26. High beam warning light
27. Left hand turn signal light
**Display Styles**

There are four different display styles to select from.

Style 03 is used for visual recognition and consistency throughout this owner’s handbook.

For additional warning and information messages, see page 44.

**Engine Management System Malfunction Indicator Light (MIL)**

The Malfunction Indicator Light (MIL) for the engine management system illuminates when the ignition is switched ON (to indicate that it is working) but should not become illuminated when the engine is running.

If the engine is running and there is a fault with the engine management system the MIL will be illuminated and the general warning symbol will flash. In such circumstances, the engine management system may switch to ‘limp-home’ mode so that the journey may be completed, if the fault is not so severe that the engine will not run.

**Warning Lights**

**Caution**

If a red warning light is shown then the motorcycle must be stopped immediately. Read any warning messages and rectify the issue.

If an amber warning light is shown then the motorcycle does not need to be stopped immediately. Read any warning messages and rectify the issue.

When the ignition is switched on, the instrument warning lights will illuminate for 1.5 seconds and will then go off (except those which remain on until the engine starts, as described in the following pages).

**Warning**

Reduce speed and do not continue to ride for longer than is necessary with the MIL illuminated. The fault may adversely affect engine performance, exhaust emissions and fuel consumption.

Reduced engine performance could cause a dangerous riding condition, leading to loss of control and an accident.

Contact an authorized Triumph dealer as soon as possible to have the fault checked and rectified.
General Information

Note
If the MIL flashes when the ignition is switched ON contact an authorized Triumph dealer as soon as possible to have the situation rectified. In these circumstances the engine will not start.

Low Oil Pressure Warning Light
With the engine running, if the engine oil pressure becomes dangerously low, the low oil pressure warning light will illuminate.

Caution
Stop the engine immediately if the low oil pressure warning light illuminates. Do not restart the engine until the fault has been rectified.
Severe engine damage will result from running the engine when the low oil pressure warning light is illuminated.

Note
The low oil pressure warning light will illuminate if the ignition is switched ON without running the engine.

Immobilizer/Alarm Indicator Light
This Triumph motorcycle is equipped with an engine immobilizer which is activated when the ignition switch is turned to the OFF position.

Without Alarm Equipped
When the ignition switch is turned to the OFF position, the immobilizer light will flash on and off for 24 hours to show that the engine immobilizer is on. When the ignition switch is turned to the ON position the immobilizer and the indicator light will be off.
If the indicator light remains on it indicates that the immobilizer has a malfunction that requires investigation. Contact an authorized Triumph dealer as soon as possible to have the fault checked and rectified.

With Alarm Equipped
The immobilizer/alarm light will only illuminate when the conditions described in the genuine Triumph accessory alarm instructions are met.

Anti-lock Braking System (ABS) Warning Light
When the ignition is switched on, it is normal that the ABS warning light will flash on and off. The light will continue to flash after engine start-up until the motorcycle first reaches a speed exceeding 6 mph (10 km/h) when it will go off.

Note
Traction control will not function if there is a malfunction with the ABS. The warning lights for the ABS, traction control and the MIL will be illuminated.
The warning light should not illuminate again until the engine is restarted unless there is a fault, or the ABS is switched off—the warning light will remain illuminated.

If the warning light becomes illuminated at any other time while riding it indicates that the ABS has a malfunction that requires investigation.

**Warning**

If the ABS is not functioning, the brake system will continue to function as a non-ABS equipped brake system. Do not continue to ride for longer than is necessary with the warning light illuminated. Contact an authorized Triumph dealer as soon as possible to have the fault checked and rectified. In this situation braking too hard will cause the wheels to lock resulting in loss of motorcycle control and an accident.

**Traction Control (TC) Indicator Light**

The Traction Control (TC) indicator light is used to indicate that the traction control system is active and is working to limit rear wheel slip during periods of hard acceleration or under wet or slippery road conditions.

If the ABS is not functioning, the brake system will continue to function as a non-ABS equipped brake system. Do not continue to ride for longer than is necessary with the warning light illuminated. Contact an authorized Triumph dealer as soon as possible to have the fault checked and rectified. In this situation braking too hard will cause the wheels to lock resulting in loss of motorcycle control and an accident.

**Warning**

If the traction control is not functioning, care must be taken when accelerating and cornering on wet/slippery road surfaces to avoid rear wheel spin.

Do not continue to ride for longer than is necessary with the engine management system Malfunction Indicator Light (MIL) and traction control warning lights illuminated. Contact an authorized Triumph dealer as soon as possible to have the fault checked.

Hard acceleration and cornering in this situation may cause the rear wheel to spin resulting in loss of motorcycle control and an accident.

If traction control is switched on:
- Under normal riding conditions the TC indicator light will remain off.
- The TC indicator light will flash rapidly when the traction control system is working to limit rear wheel slip during periods of hard acceleration or under wet or slippery road conditions.

If traction control is switched off:
- The TC indicator light will not illuminate. Instead the TC disabled warning light will be illuminated.

**Note**

Traction control will not function if there is a malfunction with the ABS system. The warning lights for the ABS, traction control and the MIL will be illuminated.
General Information

Traction Control (TC) Disabled Warning Light

The TC disabled warning light should not illuminate unless traction control is switched off or there is a malfunction.

If the warning light becomes illuminated at any other time while riding, it indicates that the traction control system has a malfunction that requires investigation.

Turn Signals

When the turn signal switch is turned to the left or right, the indicator warning light will flash on and off at the same speed as the turn signals.

Hazard Warning Lights

To turn the hazard warning lights on or off, press and release the hazard warning light switch.

The ignition must be switched ON for the hazard warning lights to function.

The hazard warning lights will remain on if the ignition is switched off, until the hazard warning light switch is pressed again.

High Beam Light

When the high beam button is pressed the high beam will be switched on. Each press of the button will swap between dip and high beam.

Note

If daytime running lights are installed on the motorcycle, the high beam button has additional functionality.

If the DRL switch is in the daytime running lights position, then press and hold the high beam button to turn the high beam on. It will remain on as long as the button is held in and will turn off as soon as the button is released.

Note

A lighting on/off switch is not installed on this model. The tail light and license plate light all function automatically when the ignition is on.

The headlight will function when the ignition is on. The headlight will go off while pressing the starter button until the engine starts.

Daytime Running Lights (DRL) (if equipped)

When the ignition is switched ON and the daytime running lights switch is set to Daytime Running Lights, the daytime running lights warning light will illuminate.

The daytime running lights and low beam headlights are operated manually using a switch on the left hand switch housing. see page 42.
Warning
Do not ride for longer than necessary in poor ambient light conditions with the Daytime Running Lights (DRL) in use.
Riding with the Daytime Running Lights when dark, in tunnels or where poor ambient light is apparent may reduce the rider’s vision or blind other road users.
Blinding other road users or reduced vision in low ambient light levels may result in loss of motorcycle control and an accident.

Note
During daylight hours the Daytime Running Lights (DRL) improve the motorcycles visibility to other road users.
Low beam headlights must be used in any other conditions unless the road conditions allow for high beam headlights to be used.

Low Fuel Warning Light
The low fuel warning light will illuminate when there are approximately 0.92 gallons (3.5 liters) of fuel remaining in the tank.

Tire Pressure Warning Light (if equipped with TPMS)
Warning
Stop the motorcycle if the tire pressure warning light illuminates.
Do not ride the motorcycle until the tires have been checked and the tire pressures are at their recommended pressure when cold.

Note
The Tire Pressure Monitoring System (TPMS) is installed on some models and is available as an accessory for models without TPMS.
The tire pressure warning light works with the Tire Pressure Monitoring System (TPMS), see page 78.
The warning light will only illuminate when the front or rear tire pressure is below the recommended pressure. It will not illuminate if the tire is over inflated.
General Information

When the warning light is illuminated, the TPMS symbol indicating which is the deflated tire and its pressure will automatically be shown in the display area.

1. Rear tire indicator
2. Front tire indicator
3. Tire pressure warning light

The tire pressure at which the warning light illuminates is temperature compensated to 68°F (20°C) but the numeric pressure display associated with it is not. See page 157. Even if the numeric display seems at or close to the standard tire pressure when the warning light is on, a low tire pressure is indicated and a puncture is the most likely cause.

The tire pressure warning light also illuminates to indicate a low sensor battery or loss of signal.

Warning and Information Messages

It is possible for multiple warning and information messages to be shown when a fault occurs. Where this is the case, warning messages will take priority over information messages and the warning symbol will be shown on the display. The number of currently active warning messages is shown in the information tray.

The following warning and information messages may be shown if a fault is detected on the motorcycle.

General Information

BULB FAULT LEFT/RIGHT FRONT/REAR TURN SIGNAL–CHECK MANUAL
(amber indicator)

CAUTION: LOW AIR TEMPERATURE–RISK OF SURFACE ICE

If more than one message is displayed then the left/right arrow becomes active, push the joystick left/right to show other messages.
Press the joystick center to acknowledge and hide each message.

Warning Message when Ignition Switch is Turned ON

Note
To view the warning messages in styles 01, 02 and 03, push the joystick left/right.
To view the information trays in styles 04, push the joystick down/up.

If a warning message has been acknowledged but not rectified, the message will appear again when the ignition switch is turned to the ON position.
The arrow to access to the information trays are inactive and it is not possible to change the information tray until the warning message has been acknowledged or rectified.

If more than one message is displayed then the left/right arrow becomes active, push the joystick left/right to show other messages.

Tire Pressure Low Warning Shown

Push the joystick left or right to review the warnings previously acknowledged.
When a warning or information message is activated, the message will be accompanied by the relevant warning or information symbol in the instrument panel.
Warning and information messages will be shown until they have been rectified.

Sensor Signal Warning Shown
General Information

**Odometer and Speedometer**

The odometer shows the total distance that the motorcycle has traveled. The odometer is only shown in the Service information tray.

The speedometer indicates the road speed of the motorcycle.

**Tachometer**

The tachometer shows the engine speed in revolutions per minute–rpm (r/min). At the end of the tachometer range there is the red zone. Engine speeds in the red zone are above maximum recommended engine speed and are also above the range for best performance.

1. **Odometer**
2. **Speedometer**

---

**1. Engine speed (rpm) shown in a numerical format**

**2. Engine speed (rpm) shown in a graph format**
Fuel Gauge

The fuel gauge indicates the amount of fuel in the tank from F (full tank) to E (empty tank).

1. Fuel gauge

With the ignition switched on, the fuel remaining in the fuel tank is indicated by the amount of gage segments that are shown full.

When the fuel tank is full, all gage segments are shown full. When the fuel tank is empty, all gage segments are shown empty. Other gage markings indicate intermediate fuel levels between full and empty.

The low fuel warning light will illuminate when approximately 0.92 gallons (3.5 liters) of fuel is remaining in the tank and the motorcycle should be refueled at the earliest opportunity.

The range to empty and instantaneous fuel consumption will be also shown in the Information tray. Press the joystick center to acknowledge and hide the low fuel warning.

After refueling, the fuel gage and range to empty information will be updated only while riding the motorcycle. Depending on the riding style, updating could take up to five minutes.

Coolant Temperature Gauge

The coolant temperature gage indicates the temperature of the engine coolant.

1. Coolant temperature gage

When the engine is started from cold, the coolant temperature gage will show empty gage segments. As the temperature increases more gage segments will be shown full. When the engine is started from hot, the coolant temperature gage will show the relevant number of full gage segments, dependent on engine temperature.

The normal temperature range is between the C (cold) and H (hot) on the coolant temperature gage.

With the engine running, if the engine coolant temperature becomes dangerously high, the high coolant temperature warning light will illuminate in the warning light location and the high coolant temperature warning information tray will be shown.
General Information

Note
The arrow to access the information trays are inactive and it is not possible to change the information tray until the warning message has been acknowledged or rectified.

COOLANT TEMPERATURE HOT

Visit garage now

1. Coolant temperature warning light
2. Coolant warning information tray
3. Coolant temperature gage

Caution
Stop the engine immediately if the high coolant temperature warning light illuminates. Do not restart the engine until the fault has been rectified.
Severe engine damage will result from running the engine when the high coolant temperature warning light is illuminated.

Ambient Air Temperature

The ambient air temperature is displayed as either °C or °F.
When the motorcycle is stationary the heat of the engine may affect the accuracy of the ambient temperature display.
Once the motorcycle starts moving the display will return to normal after a short time.

1. Ambient air temperature

To change the temperature from °C or °F, see page 62.
Frost Symbol

⚠️ Warning

Black ice (sometimes called clear ice) can form at temperatures several degrees above freezing, 32°F (0°C), especially on bridges and in shaded areas.

Always take extra care when the temperatures are low and reduce speed in potentially hazardous driving conditions such as bad weather.

Excess speed, hard acceleration, heavy braking or hard cornering when roads are slippery may result in loss of motorcycle control and an accident.

The frost symbol will illuminate if the ambient air temperature is 39°F (4°C) or lower.

The frost symbol will remain illuminated until the temperature rises to 42°F (6°C).

A message will also be shown in the information tray.

Gear Position Display

The gear position display indicates which gear (one to six) has been engaged. When the transmission is in neutral (no gear selected), the display will show N.

1. Gear position display (neutral position displayed)

1. Gear position display (third gear displayed)

#### Riding Modes

The riding modes allow adjustment of the throttle response (MAP), Anti-lock Braking System (ABS) and Traction Control (TC) settings to suit differing road conditions and rider preferences.

Riding modes can be conveniently selected using the MODE button and joystick located on the left hand switch housing, while the motorcycle is stationary or moving, see page 51.

**Note**

Up to six riding modes are available depending on the motorcycle model’s specification.
If a riding mode is edited (other than the RIDER mode), the icon will change as shown below.

<table>
<thead>
<tr>

Each riding mode is adjustable. For more information, see page 51.

Availability of the ABS, MAP and TC setting options vary between models.

### Riding Mode Selection

#### Warning

The selection of riding modes while the motorcycle is in motion requires the rider to allow the motorcycle to coast (motorcycle moving, engine running, throttle closed, clutch lever pulled in and no brakes applied) for a brief period of time.

Riding mode selection while the motorcycle is in motion should only be attempted:
- At low speed
- In traffic free areas
- On straight and level roads or surfaces
- In good road and weather conditions
- Where it is safe to allow the motorcycle to briefly coast.

Riding mode selection while the motorcycle is in motion MUST NOT be attempted:
- At high speeds
- While riding in traffic
- During cornering or on winding roads or surfaces
- On steeply inclined roads or surfaces
- In poor road/weather conditions
- Where it is unsafe to allow the motorcycle to coast.

Failure to observe this important warning will lead to loss of motorcycle control and an accident.
**Warning**

After selecting a riding mode, operate the motorcycle in an area free from traffic to gain familiarity with the new settings.

Do not loan your motorcycle to anyone as they may change the riding mode settings from the one you are familiar with, causing loss of motorcycle control and an accident.

**Warning**

If Traction Control (TC) has been disabled in the Main Menu as described on page 58 then all TC settings that were saved for all riding modes will be overridden.

TC will remain off regardless of the riding mode selection, until it has been re-enabled or the ignition has been switched off then on again.

If the traction control is disabled, the motorcycle will handle as normal but without traction control. In this situation accelerating too hard on wet/slippery road surfaces may cause the rear wheel to slip, and may result in loss of motorcycle control and an accident.

---

**Note**

The riding mode will default to ROAD when the ignition is switched ON, if the OFF-ROAD, OFF-ROAD PRO or RIDER mode was active the last time the ignition was switched OFF with TC set to OFF-ROAD, OFF-ROAD PRO or OFF in the required mode.

A warning message is shown stating that the riding mode has changed. It also briefly allows the riding mode to be changed back to the original riding mode.

Otherwise, the last selected riding mode will be remembered and activated when the ignition is switched ON.

If the mode icons are not shown when the ignition switch is in the ON position, make sure that the engine stop switch is in the RUN position.

---

1. Mode button
2. New riding mode
3. Current riding mode
To select a riding mode:

- Press and release the MODE button on the left hand switch housing to activate the riding mode selection tray.
- The currently active riding mode icon is shown in the right hand side of the display.

To change the selected riding mode:

- Press the joystick left or right, or repeatedly press the MODE button until the required riding mode is highlighted in the center of the riding mode information tray.
- A brief press of the joystick center will select the required riding mode, and the riding mode icon in the right hand side of the display will change.
- The selected mode is activated once the following conditions for switching modes have been met:

**Motorcycle Stationary–Engine Off**

- The ignition is switched ON.
- The engine stop switch is in the RUN position.

**Motorcycle Stationary–Engine Running**

- Neutral gear is selected or the clutch is pulled in.

**Motorcycle in Motion**

Within 30 seconds of selecting a riding mode the rider must carry out the following simultaneously:

- Close the throttle.
- Make sure that the brakes are not engaged (allow the motorcycle to coast).

**Note**

It is not possible to select OFF-ROAD, OFF-ROAD PRO or RIDER modes while the motorcycle is in motion, if the TC settings are set to OFF-ROAD, OFF-ROAD PRO or OFF in either of those modes.

In this case, the motorcycle must be brought to a stop before the riding mode change can take place.

If a riding mode change is not completed, the riding mode icon will alternate between the previous riding mode and the newly selected riding mode until the change is complete or it is canceled.

The riding mode selection is now complete and normal riding can be resumed.
Main Menu
To access the Main menu:
• The motorcycle must be stationary with the ignition switched on.
• Press the HOME button on the right handlebar switch housing.
• Scroll the Main menu by pushing the joystick down/up until the required option is selected and then press the joystick center to confirm.

Main Menu Screen
The Main menu allows access to the following options:

Riding Modes
This menu allows configuration of the riding modes. For more information, see page 56.

Bike Set Up
This menu allows configuration of the different features of the motorcycle. For more information, see page 56.

Trip Set Up
This menu allows configuration of Trip 1 and Trip 2. For more information, see page 58.

Bluetooth® (if equipped)
This menu allows configuration of the Bluetooth® connectivity. For more information, see the My Triumph Connectivity Handbook. The My Triumph Connectivity Handbook is also available on the Internet at: https://www.triumphinstructions.com/ Enter the part number 'A9820200' into the search field to access the handbook.

Display Set Up
This menu allows configuration of the display options. For more information, see page 60.

Reset to Defaults
This menu allows all instrument settings to be returned to the default setting. For more information, see page 65.

\(^4\) All Models except Tiger 900 and Tiger 900 Rally Pro

Key

- ● Standard (Factory Default Setting)
- ○ Selectable Option
- ○ Option Not Available
General Information

Riding Modes
To access the Riding Modes menu:

• From the MAIN MENU, push the joystick down and select RIDING MODES.

• Press the joystick center to confirm.

• Scroll down/up using the joystick to select the required riding mode. Press the joystick center to confirm.

• The relevant setting options for the selected riding mode are now shown.

To change a setting, scroll down/up using the joystick until the required setting option is highlighted and press the joystick center to select.

Bike Set Up Menu
The Bike Set Up menu allows configuration of the different features of the motorcycle.

To access the Bike Set Up menu:

• From the MAIN MENU, push the joystick down and select BIKE SET UP.

• Press the joystick center to confirm.

Bike Set Up–TSA (Shift Assist) (if equipped)
Triumph Shift Assist (TSA) triggers a momentary engine torque change to allow gears to engage, without closure of the throttle or operation of the clutch. This feature works for both up-shifts and down-shifts of gear.

The clutch must be used for stopping and pulling away.

TSA will not operate if the clutch is applied or if an up-shift is attempted by mistake when in 6th gear.
It is necessary to use a positive pedal force to make sure there is a smooth gear shift.

To enable/disable TSA:

- From the Bike Set Up menu, push the joystick down to select TSA (SHIFT ASSIST) and press the joystick to confirm.
- Push the joystick down/up to scroll between ENABLED and DISABLED.
- Press the joystick center to confirm the required selection.
- The display will then return to the Bike Set Up menu.

For more information on Triumph Shift Assist (TSA), see page 105.

**Bike Set Up—Turn Signals**

The turn signals can be set to Auto Basic, Auto Advanced or Manual mode.

**Selecting a Turn Signals Mode**

To select the required turn signals mode:

- From the Bike Set Up menu, push the joystick down to select TURN SIGNALS and press the joystick center to confirm.
- Push the joystick down/up to scroll between AUTO BASIC, AUTO ADVANCED and MANUAL.
  - Auto Basic – The self-canceling function is on. The turn signals will activate for eight seconds and an additional 71 yards (65 meters).
  - Auto Advanced – The self-canceling function is on. A short press activates the turn signals for three flashes. A longer press activates the turn signals for eight seconds and an additional 71 yards (65 meters).
  - Manual – The self-canceling function is off. The turn signals must be manually canceled using the turn signal switch.
- Press the joystick center to confirm the required selection.
- The display will then return to the Bike Set Up menu.
General Information

Bike Set Up–Traction Control (TC)
The Traction Control (TC) system can be temporarily disabled. The Traction Control (TC) system cannot be permanently disabled, it will be automatically enabled when the ignition is turned off and then on again.

To disable or enable the TC system:
- From the BIKE SET UP menu, press the joystick center to select TC.
- Push the joystick down/up to scroll between ENABLED and DISABLED.
- Press the joystick center to select the required option.
- Once selected the display will return to the BIKE SET UP display.

To review the service interval:
- From the BIKE SET UP menu, push the joystick down to select SERVICE.
- Press the joystick center to display the SERVICE information.

Trip Set Up
This menu allows the configuration of the trip meters.

To access the Trip Set Up menu:
- From the MAIN MENU, push the joystick down and select TRIP SET UP.
- Press the joystick center to confirm.

Selecting TRIP 1 RESET or TRIP 2 RESET allows the relevant trip meter to be configured manually or automatically. The trip meter set up procedure is the same for both trip meters.

Bike Set Up–Service
The service interval is set to a distance and/or time period.

Manual reset will only reset the selected trip meter when the rider chooses to do so. For more information, see page 59.
Automatic reset will reset each trip meter after the ignition has been switched off for a set time. For more information, see page 59.

Trip meter 2 can be enabled or disabled. For more information, see page 60.

**Trip Set Up–Manual Reset**

To set the trip computer to reset manually:

- From the TRIP SETUP menu, push the joystick down and then press the joystick center to select TRIP 1 RESET or TRIP 2 RESET.
- Push the joystick center to select MANUAL.

There are two options:

- RESET NOW AND CONTINUE—Resets all trip meter data in the relevant trip meter.
- CONTINUE WITHOUT RESET—Any trip meter data in the relevant trip meter will not be reset.

**Trip Set Up–Automatic Reset**

To set the trip computer to automatically reset:

- From the TRIP SETUP menu, push the joystick down/up and then press the joystick center to select TRIP 1 RESET or TRIP 2 RESET.
- Push the joystick down/up to select AUTOMATIC and then press the joystick center to confirm.
- Using the joystick down/up, choose the timer setting and press the joystick center to confirm the required time limit.
- The required time limit is then stored in the trip memory. A tick is shown to indicate the selected option.
- When the ignition is turned off, the trip meter is set to zero when the time period has elapsed.

The following table shows two examples of the automatic trip reset functionality.

<table>
<thead>
<tr>
<th>Ignition Turned Off</th>
<th>Selected Time Delay</th>
<th>Trip Meter Resets to Zero</th>

</thead>
<tbody>
<tr>
<td>10:30 hrs</td>
<td>4 HRS</td>
<td>14:30 hrs</td>
</tr>
<tr>
<td>18:00 hrs</td>
<td>16 HRS</td>
<td>10:00 hrs (next day)</td>
</tr>
</tbody>
</table>
General Information

Trip 2 Enable/Disable
Trip 2 meter can be enabled or disabled. If trip 2 meter is disabled, it will no longer be shown in the information tray.

To enable or disable the Trip 2 meter:
- From the TRIP SET UP menu, push the joystick down/up to scroll to the TRIP 2 DISPLAY. Press the joystick center to confirm.
- Push the joystick down/up to scroll between ENABLED and DISABLED. Press the joystick center to confirm. A tick is shown to indicate the selected option.

Display Set Up Menu
The Display Set Up menu allows configuration of the different display screen options.

To access the Display Set Up menu:
- From the MAIN MENU, push the joystick down and select DISPLAY SET UP. Press the joystick center to confirm.
- Select the required option from the list to access the relevant information.

Display Set Up–Color
To select a different color for the display information:
- From the DISPLAY SET UP menu, push the joystick down/up to select COLOR.
- Press the joystick center to confirm.
- Push the joystick down/up to scroll between the four different colored icons. There are four color options available: blue, green, yellow and white.
- Press the joystick center to select the required color.
- The new color is then applied to the instrument display for all styles. Press the HOME button to exit.
Display Set Up–Brightness
There are two brightness options to select from:
- High contrast–day time mode
- Low contrast–night time mode.

Note
Tiger 900 models only have the high contrast option available.

To adjust the brightness:
- From the DISPLAY SET UP menu, push the joystick down to select BRIGHTNESS (HIGH CONTRAST) or BRIGHTNESS (LOW CONTRAST) menu.
- Press the joystick center to select the required menu.

Brightness (High Contrast) Shown
- Push the joystick left/right to adjust the brightness.
- Press the joystick center to confirm the required level of brightness.
- Press the HOME button to return to the main display.

Display Set Up–Visible Tray
The Visible Tray menu allows the selection of the items to be shown in the information tray.

To select the Visible Tray menu:
- From the DISPLAY SET UP menu, push the joystick down to select the VISIBLE TRAY option.
- Press the joystick center to show the available options.
- Scroll the menu by moving the joystick down/up until the required option is highlighted.
- Press the joystick center to select/deselect the information trays.

An information tray item with a tick next to it will be shown in the tray. An information tray item without a tick next to it will not be shown in the tray.

Note
In bright sunlight, low brightness settings will be overridden to make sure that the instruments can be viewed at all times.
General Information

Display Set Up–Language
The Language menu allows the preferred language to be used as the instrument display language.

To select the required language for the instrument display:

- From the DISPLAY SET UP menu, push the joystick down to select the LANGUAGES option.
- Press the joystick center to confirm and display the available language options.
- Scroll the menu by pushing the joystick down/up until the required language option is highlighted.
- Press the joystick center to select/deselect the correct LANGUAGE. A tick is shown to indicate the selected option.
- Press the joystick center to confirm the language option.

Display Set Up–Units
The Units menu allows the selection of a preferred unit of measurement.

To select the required units of measurement:

- From the DISPLAY SET UP menu, push the joystick down and select UNITS.
- Press the joystick center to confirm.

To change the unit of measurement:

- Push the joystick down/up to highlight the required option (DISTANCE/ECONOMY, TEMPERATURE or PRESSURE).
- Press the joystick center to select. A tick is shown to indicate the selected option.
- Push the joystick down/up to select the required unit of measurement.
- Press the joystick center to confirm. A tick is shown to indicate the selected option.

The options available are:

Economy:
- Miles & MPG (UK)
- Miles & MPG (US)
- KM & L/100KM
- KM & KM/L
General Information

Temperature:
- °C
- °F

Pressure:
- PSI
- bar
- KPa

Display Set Up–Clock

The Clock menu allows the adjustment of the clock to be set to the local time.

To set the clock:
- From the Display Set Up menu, push the joystick down to select CLOCK and press the joystick center to confirm.
- Push the joystick down/up to select between either 12 Hr or 24 Hr clock and press the joystick center to confirm selection. A tick is shown to indicate the selected option.

The clock will display in either 12 or 24 hour format. Once the clock format is set, the display will return to the CLOCK menu.

To set the time, push the joystick down/up to select HOURS or MINUTES.

To adjust the hour setting:
- Select HOURS on the display and press the joystick center. A tick will appear next to HOURS and the hour display will flash as shown below.
- Push the joystick down/up to set the hour. Press the joystick center to confirm.

To adjust the minute setting:
- Select MINUTES on the display and press the joystick center. A tick will appear next to MINUTES and the minute display will flash as shown below.
- Push the joystick down/up to set the minute. Press the joystick center to confirm.
General Information

Display Set Up–Date
This function allows the date and date format to be adjusted.

To set the date and date format:
• From the DISPLAY SET UP menu, push the joystick down to select DATE and press the joystick center to confirm.
• Push the joystick down/up to select DATE FORMAT. Press the joystick center to confirm.

Once the date format is set the display will return to the DATE menu.

• Push the joystick down/up to select either of the date format options and press the joystick center to confirm selection. A tick is shown to indicate the selected option.

To set the date:
• From the DISPLAY SET UP menu, push the joystick down to select DATE and press the joystick center to confirm.
• Push the joystick down/up to select YEAR and press the joystick center to confirm. The YEAR display will flash.
• Push the joystick down/up to set the current year and then press the joystick center to confirm.
• To set the MONTH and DAY repeat the procedure used to set the year.
Reset to Defaults

The Reset to Default option allows the Main Menu display items to be reset to the default setting.

To reset the Main Menu display items:

- From the Main Menu, push the joystick down and select RESET TO DEFAULTS.
- Push the joystick down/up to select CONFIRM or CANCEL. Press the joystick center to confirm the selection.
  - Confirm–The following main menu settings and data will be reset to the factory default values–Riding Modes, Indicator Set Up, Trip Computers, Visible Trays, Language, Traction Control, Style, Display Brightness, Lap Timer settings and data.
  - Cancel–The main menu settings and data will remain unchanged and the display will return to the previous menu level.

Information Tray

![Warning]

When the motorcycle is in motion, only attempt to switch between the information tray modes or reset the fuel information under the following conditions:
- At low speed
- In traffic free areas
- On straight and level roads or surfaces
- In good road and weather conditions.

Failure to observe this important warning could lead to loss of motorcycle control and an accident.

The information tray allows easy access to different motorcycle status information. Any warning messages must first be acknowledged before the information tray can be accessed, see page 66.

The information tray appears in the top section of the display screen for styles 01, 02 and 03. It appears on the left hand side of the display screen for style 04.

To view the information trays in styles 01, 02 and 03, push the joystick down/up.

To view the information trays in style 04, push the joystick left/right.
General Information

The information tray contains the following information tray items:

- Warnings and Information Messages, see page 66
- Tachometer (if available)
- Brightness, see page 67
- Trip Meter, see page 67
- Fuel Consumption, see page 68
- Service Interval, see page 68
- Tire Pressure Monitoring System (TPMS), see page 69
- Contrast, see page 69
- Color, see page 70
- Style Select, see page 71
- Coolant (Style 04 only)
- Damping (if available), see page 71
- Suspension (Tiger 900 GT Pro only), see page 72
- Bluetooth® features, see My Triumph Connectivity Handbook.

The My Triumph Connectivity Handbook is also available on the Internet at: https://www.triumphinstructions.com/
Enter the part number ‘A9820200’ into the search field to access the handbook.

Different information tray items can be shown or hidden from the information tray. For further information, refer to page 61.

Warning Review

Any warnings and information messages are shown in the Warnings tray. An example is shown below.

To view the warnings:

- Push the joystick down/up to scroll through the options until the warning review is shown.
- Push the joystick left/right to review each warning (if more than one). The warning counter will show the amount of warnings that are present.
- Push the joystick down/up to return to the information tray.

Low Battery Warning

If items such as heated grips are mounted and are on with the engine at idle, over a period of time, the battery voltage may drop below a predetermined voltage and a warning message will be shown in the Warnings tray.
Brightness
The Brightness information tray allows the brightness of the display screen to be adjusted.

To adjust the brightness of the display screen:
- Push the joystick left/right to increase/decrease the level of brightness.
- Press the joystick center to confirm the required level of brightness.

Note
In bright sunlight, low brightness settings will be overridden to make sure that the instruments can be viewed at all times.

Note
Do not cover the light sensor on the display screen as this will stop the screen brightness and contrast from working correctly.

Trip Meter
There are two trip meters that can be accessed and reset in the information tray.

To view a specific trip meter:
- Push the joystick down/up to scroll through the information tray items until Trip 1 meter is shown.
- Select TRIP 1 or TRIP 2 by pushing the joystick left/right.

Note
TRIP 2 meter can be shown or hidden from the information tray. For more information, see page 60.

To reset a trip meter:
- Select the trip meter to be reset.
- Press and hold the joystick center for more than one second.
- The trip meter will then be reset.

The trip meter can also be reset from the Main menu, see page 59.
General Information

Fuel Consumption
The Fuel Consumption information tray shows fuel consumption information.

1. Fuel gage
2. Current fuel consumption
3. Average fuel consumption
4. Range to empty

Current Fuel Consumption
This is an indication of the fuel consumption at an instant in time. If the motorcycle is stationary, --.- will be shown in the display area.

Average Fuel Consumption
This is an indication of the average fuel consumption. After being reset the display will show dashes until 0.1 miles/km has been covered.

Range to Empty
This is an indication of the predicted distance that can be traveled on the remaining fuel in the tank.

Reset
To reset the average fuel consumption, press and hold the joystick center.

Note
After refueling, the fuel gage and range to empty information will be updated only while riding the motorcycle. Depending on the riding style, updating could take up to five minutes.

Odometer and Service
The Odometer and Service information tray shows the odometer, and the distance and days remaining before the next service is recommended.
Tire Pressure Monitoring System (TPMS) (if equipped)

**Warning**

Stop the motorcycle if the tire pressure warning light illuminates. Do not ride the motorcycle until the tires have been checked and the tire pressures are at their recommended pressure when cold.

The Tire Pressure Monitoring System (TPMS) information tray is with the Service information tray.

To view the Tire Pressure Monitoring System (TPMS):
- Push the joystick down/up and scroll the Service information tray.
- Select Tire Pressure by pushing the joystick left/right.

The Tire Pressure Monitoring System (TPMS) information tray shows the front and rear tire pressures.

Tire Pressure Warning Light

The tire pressure warning light will only illuminate when the front or rear tire pressure is below the recommended pressure. It will not illuminate if the tire is over inflated.

Front Tire Pressure Indicator

This shows the current front tire pressure.

Rear Tire Pressure Indicator

This shows the current rear tire pressure.

Low Tire Pressure

The front or rear tire will be highlighted on the motorcycle image to indicate that the tire pressure is below the recommended pressure.

For more information on TPMS and tire pressures, see page 157.

Screen Contrast

The Contrast information tray allows the display screen contrast to be adjusted.

1. Rear tire pressure indicator
2. Tire pressure warning light
3. Low front tire pressure warning shown
4. Front tire pressure indicator
There are three options available:

- **HIGH**—This option locks the display screen to the white background version of each display screen style for maximum visibility during the day.
- **AUTO**—This option uses the instrument light sensor to adjust the contrast to the most suitable setting. In bright sunlight, low contrast settings will be overridden to make sure the instruments can be viewed at all times.
- **LOW**—This option locks the display screen to the black background version of each display screen style for maximum visibility at night time.

**Note**

*Tiger 900 models only have the HIGH contrast option available.*

To select an option:

- Push the joystick left/right to select the HIGH, AUTO or LOW contrast option and press the joystick center to confirm.
- If the rider defined brightness setting is suitable this will be used, see page 61.

**Color**

The Color information tray allows a different color to be applied to the current style. There are four color options available: blue, green, yellow and white.

To apply a different color to the current style:

- Push the joystick left/right to select the required color.
- Press the joystick center to confirm the required color.
- The new color is then applied to the current style.
- To apply a color to all styles, see page 60.

**Note**

*Do not cover the light sensor on the display screen as this will stop the screen brightness and contrast from working correctly.*
**General Information**

**Style Select**

The Style Select information tray allows a different style to be applied to the display screen.

To change the display screen style:
- Push the joystick left/right to select the required style and then press the joystick center to confirm.

**Damping**

**Tiger 900 GT Pro Only**

The Damping information tray allows the suspension damping to be adjusted for the ride.

To adjust the suspension damping:
- Push the joystick left/right to decrease/increase the level of damping. There are 3 levels available; comfort, normal and sport.
- Press the joystick center to confirm the required level of damping.
General Information

Suspension

Tiger 900 GT Pro Only

The Suspension information tray allows the selection of predetermined suspension settings.

1. Rider only setting
2. Rider and passenger setting
3. Rider and luggage setting
4. Rider, passenger and luggage setting

To select a predefined suspension setting:
• Push the joystick left/right to highlight the required suspension setting.
• Press the joystick center to confirm the required suspension setting.

Cruise Control

All Models except Tiger 900

⚠️ Warning

Cruise control must only be used where you can ride safely at a steady speed.

Cruise control should not be used when riding in heavy traffic, on roads with sharp/blind bends or when they are slippery.

Using cruise control in heavy traffic, on roads with sharp/blind bends or when they are slippery, may result in loss of motorcycle control and an accident.

⚠️ Warning

This Triumph motorcycle should be operated within the legal speed limits for the particular road traveled.

Operating a motorcycle at high speeds can be potentially dangerous since the time available to react to given traffic situations is greatly reduced as road speed increases.

Always reduce speed in potentially hazardous driving conditions such as bad weather or heavy traffic.
General Information

⚠️ Warning

Only operate this Triumph motorcycle at high speed in closed-course on-road competition or on closed-course racetracks.

High speed operation should only then be attempted by riders who have been instructed in the techniques necessary for high speed riding and are familiar with the motorcycle’s characteristics in all conditions.

High speed operation in any other circumstances is dangerous and will lead to loss of motorcycle control and an accident.

---

Note

Cruise control may not function if there is a malfunction with the ABS system and the ABS warning light is illuminated.

Cruise control will continue to function if a riding mode is selected with ABS set to Off-Road or Off.

Cruise control will continue to function if ABS has been disabled.

---

The cruise control buttons are located on the left hand switch housing and can be operated with minimum movement by the rider.

1. Cruise control RES/+ button
2. Cruise control SET/- button

Cruise control can be switched on or off at any time but it cannot be activated until all the conditions described on page 73 have been met.

Activating Cruise Control

To turn on the cruise control system, press the SET/- button. The cruise control symbol will be shown in the display screen. The cruise control set speed will be shown as ‘—’ indicating that a speed has not yet been set.

To activate cruise control, the following conditions have to be met:

- The motorcycle must be traveling at a speed between 19 to 100 mph (30 to 160 km/h).
- The motorcycle must be in 3rd gear or higher.
Once these conditions have been met, press the SET/- button to activate cruise control. The cruise control symbol will be shown in a green light in the TFT display to indicate that cruise control is now active.

The word SET will be shown next to the cruise control symbol. The cruise control set speed will be shown and the cruise control light will illuminate in the tachometer indicating that cruise control is active.

Adjusting the Set Speed While in Cruise Control

To adjust the set speed while in cruise control, press and release the:

• RES/+ button to increase the speed
• SET/- button to decrease the speed.

Each press of the buttons will adjust the speed by 1 mph or 1 km/h. If the buttons are held, the speed continuously increases or decreases in single digit increments.

Stop pressing the adjust button when the required speed is shown in the display.

Note

The cruise control set speed display will flash until the new set speed has been achieved.

If riding up a steep incline and cruise control is unable to maintain the set speed, the cruise control set speed display will flash until the motorcycle has regained the set speed.

An alternative way to increase the speed in cruise control is to accelerate to the required speed using the throttle grip and then press the SET/- button.
Deactivating Cruise Control

The cruise control can be deactivated by one of the following methods:

- Roll the throttle twist grip fully forward.
- Pull the clutch lever.
- Operate the front or rear brake.
- Increase speed by using the throttle grip for more than 60 seconds.

Upon deactivation, the cruise control light will go out in the tachometer but the SET indicator and set speed will still be shown in the display screen, indicating that the cruise control set speed has been stored.

The cruise control set speed can be resumed as described on page 75, provided the cruise control has not been deactivated by turning the ignition switch to the OFF position.

Resuming the Cruise Control Set Speed

⚠️ Warning

When resuming cruise control, always make sure that the traffic conditions are suitable for the set speed.

Using cruise control in heavy traffic, on roads with sharp/blind bends or when they are slippery, may result in loss of motorcycle control and an accident.

Cruise control will be deactivated if one of the following actions has been taken:

- Roll the throttle twist grip fully forward.
- Pull the clutch lever.
- Operate the front or rear brake.
- Increase speed by using the throttle grip for more than 60 seconds.

The cruise control set speed can be resumed by pressing and releasing the RES/+ button provided a set speed has been stored.

The motorcycle must be traveling at a speed between 19 to 100 mph (30 to 160 km/h) and be in 3rd gear or higher.

A stored set speed is indicated by the word SET next to the cruise control symbol in the display screen.

The stored set speed will remain in the cruise control memory until the ignition switch has been turned to the OFF position.

Note

The cruise control set speed display will flash until the resumed set speed has been achieved.
Traction Control (TC)

**Warning**
The traction control and optimized cornering traction control systems are not a substitute for riding appropriately for the prevailing surface and weather conditions. The systems cannot prevent loss of traction due to:
- excessive speed when entering turns
- accelerating at a sharp lean angle
- braking.

Traction control or optimized cornering traction control cannot prevent the front wheel from slipping.

Failure to observe any of the above may result in loss of motorcycle control and an accident.

**Warning Continued**

Hard acceleration and cornering in this situation may cause the rear wheel to spin resulting in loss of motorcycle control and an accident.

All motorcycles are equipped with Traction Control (TC). Traction control is a system that helps to maintain traction when accelerating on wet/slippery road surfaces. If sensors detect that the rear wheel is losing traction (slipping), the traction control system will engage and alter the engine power until traction to the rear wheel has been restored. The traction control indicator light will flash while it is engaged and a change to the sound of the engine may be noticed. For information on the traction control indicator light operation, see page 41.

**Note**

Traction control may not always be active depending on the riding mode selected.

Traction control and optimized cornering traction control (if equipped) may not function if there is a malfunction with the ABS system. In this situation, the warning lights for the ABS, traction control and the MIL may be illuminated.
Optimized Cornering Traction Control (if equipped)

⚠️ Warning

If a fault occurs with the optimized cornering traction control system, the traction control disabled warning light will illuminate and a message will be shown in the display.

In this situation, the traction control system will continue to operate but without the optimized cornering function, provided that:

- There are no other faults with the traction control system.
- Traction control has NOT been disabled (see Bike Setup on page 58 or Riding Mode Configuration on page 55).

Care must be taken when accelerating and cornering on wet/slippery road surfaces to avoid rear wheel spin.

In the event of a fault, the traction control disabled warning light may be accompanied by the engine management system malfunction indicator light and/or the ABS warning light.

Do not continue to ride for longer than is necessary with any of the above warning lights illuminated. Contact an authorized Triumph dealer as soon as possible to have the fault checked and rectified.

Hard acceleration and cornering in this situation may cause the rear wheel to spin resulting in loss of motorcycle control and an accident.

Optimized cornering traction control is a system designed to provide increased control should the traction control be activated while the motorcycle is leaning in a corner.

The system constantly monitors the lean angle of the motorcycle and adapts the level of traction control intervention to maintain rear wheel traction during cornering.

Optimized cornering traction control is not active when in Off-Road or Off-Road Pro mode.

Note

Traction control may not always be active depending on the riding mode selected.

Traction control and optimized cornering traction control (if equipped) may not function if there is a malfunction with the ABS system. In this situation, the warning lights for the ABS, traction control and the MIL may be illuminated.

For full details of the traction control disabled warning light operation and its associated instrument warning messages, see page 42.
General Information

Traction Control Settings

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>If the traction control is disabled, the motorcycle will handle as normal but without traction control. In this situation accelerating too hard on wet/slippery road surfaces may cause the rear wheel to slip which may result in loss of motorcycle control and an accident.</td>
</tr>
</tbody>
</table>

The traction control system can be disabled as described in Bike Setup on page 58, or set to the conditions described in Riding Mode Configuration on page 55.

Tire Pressure Monitoring System (TPMS) (if equipped)

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>The daily check of tire pressures must not be excluded because of the installation of the Tire Pressure Monitoring System (TPMS). Check the tire pressure when the tires are cold using an accurate tire pressure gage, see the Tire section for more information. Use of the TPMS system to set inflation pressures may lead to incorrect tire pressures leading to loss of motorcycle control and an accident.</td>
</tr>
</tbody>
</table>

Function

Tire pressure sensors are mounted to the front and rear wheels. These sensors measure the air pressure inside the tire and transmit pressure data to the instruments. These sensors will not transmit the data until the motorcycle is traveling at a speed greater than 12 mph (20 km/h). Two dashes will be shown in the display area until the tire pressure signal is received.

An adhesive label will be mounted to the wheel rim to indicate the position of the tire pressure sensor, which is near the valve.
Note
For all motorcycles models without the Tire Pressure Monitoring System (TPMS) installed as standard, it is available as an accessory equipped item. It must be installed by your authorized Triumph dealer. The TPMS display on the instruments will only be activated when the system has been installed.

Tire Pressure Warning Light (if equipped with TPMS)

**Warning**
Stop the motorcycle if the tire pressure warning light illuminates.
Do not ride the motorcycle until the tires have been checked and the tire pressures are at their recommended pressure when cold.

The tire pressure warning light works in conjunction with the Tire Pressure Monitoring System. See page 78.
The warning light will only illuminate when the front or rear tire pressure is below the recommended pressure. It will not illuminate if the tire is over inflated.

When the warning light is illuminated, the Tire Pressure display will show which tire is the deflated tire. It will also show the tire pressure.

![Tire Pressure Display](image)

1. Rear tire pressure indicator
2. TPMS warning light
3. Low front tire pressure warning shown
4. Front tire pressure indicator

The tire pressure at which the warning light illuminates is temperature compensated to 68°F (20°C) but the numeric pressure display associated with it is not (see page 156). Even if the numeric display seems at or close to the standard tire pressure when the warning light is on, a low tire pressure is indicated and a puncture is the most likely cause.
General Information

Tire Pressure Sensor Serial Number

The serial number for the tire pressure sensor is printed on a label attached to the sensor. This number may be required by your authorized Triumph dealer for service or diagnostics.

When the tire pressure monitoring system is being installed to the motorcycle, make sure that your authorized Triumph dealer records the serial numbers of the front and rear tire pressure sensors in the spaces provided below.

Front Tire Pressure Sensor

Rear Tire Pressure Sensor

Tire Pressures

⚠️ Warning

The Tire Pressure Monitoring System (TPMS) is not to be used as a tire pressure gage when adjusting the tire pressures.

For correct tire pressures, always check the tire pressures when the tires are cold using an accurate tire pressure gage.

Use of the TPMS system to set inflation pressures may lead to incorrect tire pressures leading to loss of motorcycle control and an accident.

⚠️ Caution

Do not use anti puncture fluid or any other item likely to obstruct air flow to the TPMS sensor’s orifices. Any blockage to the air pressure orifice of the TPMS sensor during operation will cause the sensor to become blocked, causing irreparable damage to the TPMS sensor assembly.

Damage caused by the use of anti puncture fluid or incorrect maintenance is not considered a manufacturing defect and will not be covered under warranty.

Always have your tires mounted by your authorized Triumph dealer and inform them that tire pressure sensors are installed on the wheels.
The tire pressures shown on the instrument panel indicate the actual tire pressure at the time of selecting the display. This may differ from the inflation pressure set when the tires are cold because tires become warmer during riding, causing the air in the tire to expand and the pressure to increase. The cold inflation pressures specified by Triumph take account of this.

Only adjust tire pressures when the tires are cold using an accurate tire pressure gage (see page 157), and do not use the tire pressure display on the instruments.

Replacement Tires
When replacing tyres, always have an authorized Triumph dealer fit your tyres and make sure they are aware that tyre pressure sensors are fitted to the wheels.

Sensor Batteries
When the battery voltage in a pressure sensor is low, a message will be shown in the instrument display and the TPMS symbol or message will indicate which wheel sensor has the low battery voltage. If the batteries are completely flat, only dashes will be shown in the instrument display, the red TPMS warning light will be on and the TPMS symbol will flash continuously. Contact your authorized Triumph dealer to have the sensor replaced and the new serial number recorded in the spaces provided on page 80.

With the ignition switch turned to the ON position, if the TPMS symbol flashes continuously or the TPMS warning light remains on there is a fault with the TPMS system. Contact your authorized Triumph dealer to have the fault rectified.
General Information

Fuel
Unleaded fuel only
Carburant san plomb
Gasolina sin plomo
Blefrius Benzín
Endast blyfri bensin
Benzina senza piombo
Ongelode Brandstof
Combustivul sem schumbo

Fuel Grade
Triumph motorcycles are designed to run on unleaded gasoline with a CLC or AKI octane rating \((R+M)/2\) of 87 or higher. Federal regulations require that pumps delivering unleaded gasoline are marked 'UNLEADED' and that the Cost of Living Council (CLC) or Anti-Knock Index (AKI) octane rating is also displayed. These ratings are an average of the Research Octane Number (RON) and the Motor Octane Number (MON).

Ethanol
In Europe, Triumph motorcycles are compatible with Ethanol E5 and E10 (5% and 10% Ethanol) unleaded fuel.
In all other markets Ethanol up to E25 (25% Ethanol) may be used.

Engine Calibration
In certain circumstances engine calibration may be required. Always refer to your authorized Triumph dealer.

⚠️ Caution
The motorcycle can be permanently damaged if it is allowed to operate with the incorrect grade of fuel or incorrect engine calibration.
Always make sure the fuel used is of the correct grade and quality.
Damage caused by using the incorrect fuel or engine calibration is not considered a manufacturing defect and will not be covered under warranty.

⚠️ Caution
The exhaust system for this motorcycle is equipped with a catalytic converter to help reduce exhaust emission levels.
Use of leaded fuel will damage the catalytic converter. In addition, the catalytic converter can be permanently damaged if the motorcycle is allowed to run out of fuel or if the fuel level is allowed to get very low.
Always make sure you have adequate fuel for your trip.

Note
The use of leaded fuel is illegal in some countries, states or territories.

Note
If 'knocking' or 'pinging' occurs at a steady engine speed under normal load, use a different brand of gasoline or gasoline which has a higher octane rating.
General Information

Oxygenated Gasoline
To help in meeting clean air standards, some areas of the U.S. use oxygenated gasoline to help reduce harmful emissions. These gasolines are a blend of conventional gasoline and another compound such as alcohol. This Triumph motorcycle will give its best performance when using unleaded gasoline. However, the following should be used as a guide if you use any oxygenated fuels.

Ethanol
Ethanol fuel is a mixture of 10% Ethanol and 90% gasoline and is often described under the names ‘gasohol’, ‘Ethanol enhanced’, or ‘contains Ethanol’. This fuel may be used in your Triumph motorcycle.

MTBE (Methyl Tertiary Butyl Ether)
The use of gasolines containing up to 15% MTBE (Methyl Tertiary Butyl Ether) is permitted in this Triumph motorcycle.

Methanol
Fuels containing methanol should not be used as damage to components in the fuel system can be caused by contact with methanol.

Note
Because of the generally higher volatility of oxygenated fuels, starting, engine response and fuel consumption may be adversely affected by their use. Should any of these difficulties be experienced, run the motorcycle on normal unleaded gasoline.

Refueling

⚠️ Warning
To help reduce hazards associated with refueling, always observe the following fuel safety instructions:
- Gasoline (fuel) is highly flammable and can be explosive under certain conditions. When refueling, turn the ignition switch to the OFF position.
- Do not smoke.
- Do not use a mobile telephone.
- Make sure the refueling area is well ventilated and free from any source of flame or sparks. This includes any appliance with a pilot light.
- Never fill the tank until the fuel level rises into the filler neck. Heat from sunlight or other sources may cause the fuel to expand and overflow creating a fire hazard.
- After refueling always check that the fuel filler cap is correctly closed.
- Because gasoline (fuel) is highly flammable, any fuel leak or spillage, or any failure to observe the safety advice given above will lead to a fire hazard, which could cause damage to property, injury to persons or death.
General Information

Fuel Tank Cap

1. Fuel tank cap
2. Key

To open the fuel tank cap, lift up the flap covering the lock itself. Insert the key into the lock and turn the key clockwise.

To close and lock the cap, push the cap down into place with the key inserted, until the lock clicks into place. Withdraw the key and close the key cover.

Caution

Closing the cap without the key inserted will damage the cap, tank and lock mechanism.

Filling the Fuel Tank

Warning

Overfilling the tank can lead to fuel spillage.

If fuel is spilled, thoroughly clean up the spillage immediately and dispose of the materials used safely.

Take care not to spill any fuel on the engine, exhaust pipes, tires or any other part of the motorcycle.

Because fuel is highly flammable, any fuel leak or spillage, or any failure to observe the safety advice given above may lead to a fire hazard, which could cause damage to property and injury or death to persons.

Fuel spilled near to, or onto the tires will reduce the tires’ ability to grip the road. This will result in a dangerous riding condition potentially causing loss of motorcycle control and an accident.

Caution

Avoid filling the tank in rainy or dusty conditions where airborne material can contaminate the fuel.

Contaminated fuel may cause damage to fuel system components.
Fill the fuel tank slowly to help prevent spillage. Do not fill the tank to a level above the bottom of the filler neck. This will make sure there is enough air space to allow for fuel expansion if the fuel inside the tank expands through absorption of heat from the engine or from direct sunlight.

1. **Fuel filler neck**
2. **Maximum fuel level**

After refueling always check that the fuel filler cap is correctly closed.

## Stands

### Side Stand

#### Warning

The motorcycle is equipped with an interlock system to prevent it from being ridden with the side stand in the down position. Never attempt to ride with the side stand down or interfere with the interlock mechanism as this will cause a dangerous riding condition leading to loss of motorcycle control and an accident.

#### Warning

Do not lean, sit or climb on the motorcycle when it is supported on the side stand. This may cause the motorcycle to fall over leading to motorcycle damage and an accident.
General Information

The motorcycle is equipped with a side stand on which the motorcycle can be parked. Whenever the side stand is used, before riding, always make sure that the side stand is fully up after first sitting on the motorcycle.

When parking the motorcycle using the side stand, always turn the handlebars fully to the left and leave the motorcycle in first gear.

For instructions on safe parking, refer to the How to Ride the Motorcycle section.

Center Stand (if equipped)

⚠️ Warning

Do not lean, sit or climb on the motorcycle when it is supported on the center stand. This may cause the motorcycle to fall over leading to motorcycle damage and an accident.

To set the motorcycle on the center stand:
- Hold the motorcycle upright.
- Step down firmly on the foot finder part of the stand.
- Lift the motorcycle up and to the rear using the rear grab rail as a handhold.

For instructions on safe parking, refer to the How to Ride the Motorcycle section.

⚠️ Caution

Do not use body panels or the seat as a handhold when placing the motorcycle on the center stand as this will cause damage.

1. Center stand
2. Foot finder
3. Rear grab rail
Seats

Seat Care

⚠️ Caution
To prevent damage to the seats or seat covers, care must be taken not to drop the seats.

Do not lean the seats against the motorcycle or any surface which may damage the seats or seat covers. Instead, place the seats, with the seat cover facing upwards, on a clean, flat surface which is covered with a soft cloth.

Do not place any item on the seats which may cause damage or staining to the seat covers.

For more information on seat cleaning, see page 182.

Seat Lock

⚠️ Warning
To prevent detachment of the seat during riding, after installation always grasp the seat and pull firmly upwards.

If the seat is not correctly secured in the lock, it will detach from the lock.

A loose or detached seat may cause loss of motorcycle control and an accident.

⚠️ Caution
The motorcycle must not be ridden with the key in the seat lock.
Always lock the seat and remove the key before riding the motorcycle.

The seat lock is located on the left hand side of the motorcycle, on the frame below the seat.

1. Seat lock

The seat can be removed to gain access to the battery, storage area and tool kit.
Passenger Seat

**Warning**
The rider’s seat is only correctly retained and supported once the passenger seat is correctly installed. Never ride the motorcycle with the passenger seat detached or removed, as the rider’s seat will not be secure and may move.
A loose or detached seat could cause loss of motorcycle control and an accident.

**Warning**
To prevent detachment of the seat during riding, after installation always grasp the seat and pull firmly upwards.
If the seat is not correctly secured in the lock, it will detach from the lock.
A loose or detached seat may cause loss of motorcycle control and an accident.

The passenger seat must be removed before the rider’s seat can be removed. There is also a small storage compartment located beneath the passenger seat, see page 92.

Passenger Seat Removal
To remove the passenger seat:
- Insert the ignition key into the seat lock, see page 87.
- Turn the ignition key counterclockwise while pressing down on the rear of the seat. This will release the seat from its lock and allow it to be slid rearwards.
- If equipped with heated seats, rotate the passenger seat and rest it on the rider’s seat. Disconnect the heated seat’s electrical connector.
- Remove the seat from the motorcycle.

![Diagram of passenger seat removal](image)

1. **Electrical connector**
2. **Clip**
3. **Heated passenger seat**
Passenger Seat Installation

1. Passenger seat brackets
2. Locating feature
3. Rider’s seat mountings

To install the passenger seat:
- Reconnect the heated seat’s electrical connector (if equipped).
- Push down firmly on the rear of the rider seat and hold.
- Engage the seat’s two brackets into the locating feature.
- Press down at the rear to engage in the seat lock.

Rider’s Seat

Warning

The rider’s seat is only correctly retained and supported once the passenger seat is correctly installed. Never ride the motorcycle with the passenger seat detached or removed, as the rider’s seat will not be secure and may move. A loose or detached seat could cause loss of motorcycle control and an accident.

Rider’s Seat Removal

1. Rider’s seat

To remove the rider’s seat:
- Remove the passenger seat (see page 88).
- Grasp the rider’s seat on either side, and slide it rearwards and upwards.
- If equipped with heated seats, disconnect the heated seat’s electrical connector for complete removal from the motorcycle.
Rider’s Seat Installation

1. Upper bar
2. Lower bar
3. Seat bridge
4. Seat supports

To install the seat:
• Reconnect the heated seat’s electrical connector (if equipped).
• Position the seat tongue under the upper bar on the fuel tank for the high seat position, or under the lower bar on the fuel tank for the low seat position (see page 90).
• Engage the seat’s front rail into the seat bridge at the rear of the fuel tank and lower the rear rail onto the seat supports.
• Push down firmly on the rear of the seat and hold.
• Reinstall the passenger seat (see page 88).

Rider’s Seat Height Adjustment

⚠️ Warning
Always adjust both seat height adjusters. Adjusting only one height adjuster may prevent correct installation of the seat.
Riding the motorcycle with an incorrectly mounted seat may cause loss of motorcycle control and an accident.

⚠️ Warning
After adjusting the seat height, operate the motorcycle in an area free from traffic to gain familiarity with the new seat position.
Riding the motorcycle with the seat in an unfamiliar position may cause loss of motorcycle control and an accident.

The rider’s seat is adjustable for height by approximately 0.79 in (20 mm).
To adjust the rider’s seat:
• Remove the rider’s seat (see page 89).
• Reposition both seat height adjusters to the higher or lower position as required.
• Make sure that both adjuster rails are fully engaged in their brackets on the seat.
• Reinstall the rider’s seat making sure the seat tongue is under the upper bar on the fuel tank for the high seat position, or under the lower bar on the fuel tank for the low seat position, (see page 89).

Heated Seats (if equipped)
The heated seats switches (if equipped) are located on the left hand side of the motorcycle.

There are two levels of heat: low and high.

1. Low heat symbol (amber)
2. High heat symbol (red)

Rider Heated Seat
• For maximum benefit in cold conditions, from the OFF position press the rider heated seat switch once for the high heat setting initially, and then reduce the heat level by pressing the rider heated seat switch again for the low heat setting when the seat has warmed up.
• To turn the rider heated seat off, press and release the rider heated seat switch until the heated seats symbol is no longer shown in the display.
General Information

Passenger Heated Seat

- For maximum benefit in cold conditions, switch the passenger heated seat switch to the high heat setting initially and then reduce the heat level by switching the passenger heated seat switch to the low heat setting when the passenger seat has warmed up.

- To turn the passenger heated seat off, move the switch to its central position. After a short delay, the passenger heated seat symbol will no longer be shown in the display.

Low Power Voltage Cut Off

If a low voltage is detected the heated seats switches will power off. The heated seats will not function again until the voltage rises to a safe level. The switches will not power back on automatically even if the voltage rises to the safe level. The ignition must be switched off then on again to activate the heated seats.

Storage Compartment (if equipped)

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Loose and unsecured items in the storage compartment may get damaged or cause damage to the motorcycle. Make sure there is sufficient space surrounding any electronic devices or other items for the storage compartment to close without causing any damage to the items or the motorcycle. Secure all electronic devices, cables and any other items safely in the storage compartment before riding.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Always make sure that the storage compartment lid is closed securely before reinstalling the seat to prevent damage to the storage compartment lid.</td>
</tr>
</tbody>
</table>

There is a small storage compartment located underneath the passenger seat. The storage compartment may be used to store electrical devices when using the USB socket, and small items when riding.

1. Storage compartment
2. Push to open

To open the storage compartment:
- Press the center of the left hand side of the storage compartment lid to release the lock device to open it.

Windshield

⚠️ Warning

Never attempt to clean the windshield while riding the motorcycle.
Removal of the rider’s hands from the handlebars while riding the motorcycle will diminish the ability of the rider to maintain the control of the motorcycle.
Attempting to clean the windshield while riding the motorcycle may result in loss of motorcycle control and an accident.

⚠️ Warning

Make sure that the windshield is adjusted to the same position on both sides.
Riding the motorcycle with an incorrectly adjusted windshield could cause loss of motorcycle control and an accident.
General Information

Note
The windshield installed on this motorcycle can be manually adjusted through five height positions without the use of tools.

1. Height adjustment handle
2. Adjustment position

To adjust the windshield height:
• Safely sit on the motorcycle.
• Firmly grip the adjustment handle.
• Push the windshield forwards slightly to release the tension in the mountings.
• Slide the windshield up or down to the required height.
• Release the adjustment handle.

For windshield cleaning information, see page 182.

Tool Kit
The tool kit contains the following items:
• 0.16 in (4 mm) Allen key
• 0.2 in (5 mm) Allen key
• 0.24 in (6 mm) Allen key
• Reversible screwdriver
• 14 A/F open end spanner
• 8 and 10 A/F open end spanner.

Tiger 900
The tool kit is located under the passenger seat and is secured with a rubber strap.

1. Tool kit

To access the tool kit, remove the passenger seat, see page 88.
All Models except Tiger 900

The tool kit is located in the storage tray under the rider’s seat and is secured with a rubber strap.

1. Tool kit

To access the tool kit, remove the passenger seat and then the rider’s seat, see page 88 and page 89.

USB Socket (if equipped)

⚠️ Warning

The USB socket is not waterproof unless the waterproof cap is installed. Do not connect electronic devices while it is raining.

Water in the USB socket could lead to an electrical problem, resulting in motorcycle damage, loss of motorcycle control and an accident.

⚠️ Caution

Loose and unsecured items in the storage compartment may get damaged or cause damage to the motorcycle.

Make sure there is sufficient space surrounding any electronic devices or other items for the storage compartment to close without causing any damage to the items or the motorcycle.

Secure all electronic devices, cables and any other items safely in the storage compartment before riding.

⚠️ Caution

Do not leave the ignition switch in the ON position unless the engine is running as this will discharge the battery.
General Information

The Universal Serial Bus (USB) socket allows a 5 Volt USB connection for charging electronic devices such as mobile phones, cameras and GPS devices. Loads up to two Amps can be connected to the USB socket.

To access the USB socket:
- Remove the passenger seat, see page 88.
- The USB socket is located in the storage compartment below the passenger seat.
- Press the center of the left hand side of the storage compartment lid to release the lock device to open it.
- Plug the relevant USB adapter cable into the socket. Adapter cables are not supplied with the motorcycle.
Electrical Accessory Sockets

Front Accessory Socket
All models have an accessory socket located next to the instrument display.

1. Accessory socket (front)

Rear Accessory Socket
All models except Tiger 900 have an accessory socket located next to the seat lock.

1. Accessory socket (rear)

To protect the battery from excessive discharge while using mounted electrical accessories, the current which may be drawn through each electrical accessory sockets is five Amps.

A plug, suitable for use with the accessory sockets, is available from your authorized Triumph dealer.

The accessory sockets provide a 12 Volt electrical supply.

The accessory socket circuit is protected by the specified fuse shown in the fuse charts on page 166.
Breaking-in is the name given to the process that occurs during the first hours of a new vehicle’s operation. In particular, internal friction in the engine will be higher when components are new. Later on, when continued operation of the engine has ensured that the components have ‘bedded in’, this internal friction will be greatly reduced.

A period of careful breaking-in will ensure lower exhaust emissions, and will optimize performance, fuel economy and longevity of the engine and other motorcycle components.

During the first 600 miles (1,000 km):
- Do not use full throttle;
- Avoid high engine speeds at all times;
- Avoid riding at one constant engine speed, whether fast or slow, for a long period of time;
- Avoid aggressive starts, stops, and rapid accelerations, except in an emergency;
- Do not ride at speeds greater than 3/4 of maximum speed.

From 600 to 1,000 miles (1,000 to 1,500 km):
- Engine speed can gradually be increased to the rev limit for short periods.
Daily Safety Checks

**Warning**

Failure to perform these checks every day before you ride may result in serious motorcycle damage or an accident causing serious injury or death.

Check the following items each day before you ride. The time required is minimal, and these checks will help ensure a safe, reliable ride.

If any irregularities are found during these checks, refer to the Maintenance and Adjustment section or see your authorized Triumph dealer for the action required to return the motorcycle to a safe operating condition.

Check:

**Fuel:** Adequate supply in tank, no fuel leaks (see page 84).

**Engine Oil:** Correct level on dipstick or shown in sight glass. Add correct specification oil as required. No leaks from the engine or oil cooler (see page 126).

**Drive Chain:** Correct adjustment (see page 135).

**Tires/Wheels:** Correct inflation pressures (when cold). Tread depth/wear, tire/wheel damage, loose/broken spokes, punctures etc. (see page 156).

**Nuts, Bolts, Fasteners:** Visually check that steering and suspension components, axles, and all controls are properly tightened or fastened. Inspect all areas for loose/damaged fasteners.

**Steering Action:** Smooth but not loose from lock to lock. No binding of any of the control cables (see page 144).

**Brakes:** Pull the brake lever and push the brake pedal to check for correct resistance. Investigate any lever/pedal where the travel is excessive before meeting resistance, or if either control feels spongy in operation (see page 139).

**Brake Pads:** Check that the correct amount of friction material is remaining on all the brake pads (see page 139).

**Brake Fluid Levels:** No brake fluid leakage. Brake fluid levels must be between the MAX and MIN marks on both reservoirs (see page 140).

**Front Forks:** Smooth action. No fork oil leakage (see page 145).

**Throttle:** Make sure that the throttle grip returns to the idle position without sticking (see page 134).

**Clutch:** Smooth operation and correct cable free play (see page 134).

**Coolant:** No coolant leakage. Check the coolant level in the expansion tank (when the engine is cold) (see page 131).

**Electrical Equipment:** All lights and horn function correctly (see page 30).

**Engine Stop:** Engine start/stop switch turns the engine OFF when the switch is moved to the STOP position (see page 29).

**Stands:** Returns to the fully up position by spring tension. Return springs not weak or damaged (see page 85).

Stopping the Engine

1. Engine stop switch
2. STOP position
3. RUN position
4. Starter button
5. OFF position
6. ON position
7. Ignition switch
8. Neutral indicator light

To stop the engine:
- Close the throttle completely.
- Select neutral.
- Turn the ignition switch OFF.
- Select first gear.
- Support the motorcycle on a firm, level surface with the side stand.
- Lock the steering.

Caution
The engine should not be stopped by turning the ignition switch to the OFF position when the motorcycle is moving. The engine stop switch is for emergency use only.

Stopping the engine when the motorcycle is moving may cause damage to motorcycle components.

Starting the Engine

Warning
Never start the engine or run the engine in a confined area.
Exhaust fumes are poisonous and can cause loss of consciousness and death within a short period of time.
Always operate the motorcycle in the open air or in an area with adequate ventilation.

Caution
Do not operate the starter continuously for more than five seconds as the starter motor will overheat and the battery will become discharged.
Wait 15 seconds between each operation of the starter to allow for cooling and recovery of battery power.
Do not let the engine idle for long periods as this may lead to overheating which will cause damage to the engine.

Caution
The low oil pressure warning light should go out shortly after the engine starts.
If the low oil pressure warning light stays on after starting the engine, stop the engine immediately and investigate the cause.
How to Ride the Motorcycle

Caution Continued

Running the engine with low oil pressure will cause severe engine damage.

To start the engine:

• Check that the engine stop switch is in the RUN position.
• Make sure that the transmission is in neutral.
• Turn the ignition switch ON.

Note

The instrument warning lights will illuminate and will then go off (except those which normally remain on until the engine starts – see page 39).

A transponder is installed within the key to turn off the engine immobilizer. To make sure that the immobilizer functions correctly, always have only one of the ignition keys near the ignition switch. Having two ignition keys near the switch may interrupt the signal between the transponder and the engine immobilizer. In this situation the engine immobilizer will remain active until one of the ignition keys is removed.

• Pull the clutch lever fully into the handlebar.
• Leaving the throttle fully closed, push the starter button until the engine starts.

The motorcycle is equipped with starter lockout switches. The switches prevent the electric starter from operating when the transmission is not in neutral with the side stand down.

If the side stand is extended while the engine is running, and the transmission is not in neutral then the engine will stop regardless of clutch position.

Moving Off

To move the motorcycle:

• Pull in the clutch lever and select first gear.
• Open the throttle a little and let out the clutch lever slowly.
• As the clutch starts to engage, open the throttle a little more, allowing enough engine speed to avoid stalling.
Shifting Gears

⚠️ Warning

Take care to avoid opening the throttle too far or too fast in any of the lower gears as this can lead to the front wheel lifting from the ground (pulling a 'wheelie') and to the rear tire breaking traction (wheel spin).

Always open the throttle cautiously, particularly if you are unfamiliar with the motorcycle, as a ‘wheelie’ or loss of traction will cause loss of motorcycle control and an accident.

ircraft damage may also be caused.

Shifting down should be done such that low engine speeds will be ensured.

Note

The gear shift mechanism is the 'positive stop' type. This means that, for each movement of the gear shift pedal, you can only select each gear, one after the other, in ascending or descending order.

To shift gears:
- Close the throttle while pulling in the clutch lever.
- Shift into the next higher or lower gear.
- Open the throttle part way, while releasing the clutch lever.
- Always use the clutch when shifting gear.

1. Gear shift pedal
Triumph Shift Assist (TSA) (if equipped)

⚠️ Caution

Triumph Shift Assist (TSA) is optimized for on-road use.
It must not be used during off-road riding.

⚠️ Caution

In the event of a TSA system fault when riding, the TSA system will be disabled.
Use the clutch to shift gears in the normal way otherwise damage to the engine or gear box may occur.
Contact a Triumph dealer as soon as possible to have the fault checked and rectified.

⚠️ Caution

Shifting gears must be completed with a quick and forceful pedal movement, making sure that the pedal moves through its full range of travel.
Always take care when shifting gears. After a gear shift, the pedal must be fully released before another gear shift can be made.
Incorrect gear shifts can cause damage to the engine and transmission.

Triumph Shift Assist (TSA) adjusts the engine torque to allow gears to engage, without closure of the throttle twist grip or operation of the clutch.
TSA is not an automatic system for shifting gears. Gears must be selected and shifted in the normal way using the gear pedal as described on page 104.
TSA works for both up shifts and down shifts of gear. The clutch must be used for stopping and pulling away. The clutch must be used when selecting any gear from neutral, and also when selecting neutral from any other gear.

Triumph Shift Assist will not operate if:
• The clutch is applied.
• An up shift is attempted by mistake when in 6th gear.
• A down shift is attempted by mistake when in 1st gear.
• An up shift is attempted at very low engine speeds.
• A down shift is attempted at very high engine speeds.
• An up shift is attempted during overrun.
• The vehicle speed limiter is active.
• Cruise control is active.
• Traction control is operating.
• If the previous gear has not fully engaged.
• The throttle is changed during a shift.

If TSA does not operate, the clutch can be used to shift gears in the normal way.
For more information on enabling and disabling the TSA functionality, see page 56.
Braking

1. Front brake lever

1. Rear brake pedal

⚠️ Warning

WHEN BRAKING, OBSERVE THE FOLLOWING:

- Close the throttle completely, leaving the clutch engaged to allow the engine to help slow down the motorcycle.
- Shift down one gear at a time such that the transmission is in first gear when the motorcycle comes to a complete stop.
- When stopping, always apply both brakes at the same time. Normally the front brake should be applied a little more than the rear.
- Shift down or fully disengage the clutch as necessary to keep the engine from stalling.
- Never lock the brakes, as this may cause loss of control of the motorcycle and an accident.

⚠️ Warning

For emergency braking, disregard down shifting, and concentrate on applying the front and rear brakes as hard as possible without skidding. Riders should practice emergency braking in a traffic-free area.

Triumph strongly recommends that all riders take a course of instruction, which includes advice on safe brake operation. Incorrect brake technique could result in loss of control and an accident.
For your safety, always exercise extreme caution when braking, accelerating or turning as any improper action can cause loss of control and an accident. Independent use of the front or rear brakes reduces overall braking performance. Extreme braking may cause either wheel to lock, reducing control of the motorcycle and causing an accident (see ABS warnings below).

When possible, reduce speed or brake before entering a turn as closing the throttle or braking in mid-turn may cause wheel slip leading to loss of control and an accident.

When riding in wet or rainy conditions, or on loose surfaces, the ability to maneuver and stop will be reduced. All of your actions should be smooth under these conditions. Sudden acceleration, braking or turning may cause loss of control and an accident.

When descending a long, steep gradient or mountain pass, make use of the engine’s braking effect by down shifting and use both front and rear brakes intermittently.

Continuous brake application or use of the rear brake only can overheat the brakes and reduce their effectiveness leading to loss of motorcycle control and an accident.

Riding with your foot on the brake pedal or your hands on the brake lever may actuate the brake light, giving a false indication to other road users. It may also overheat the brake, reducing braking effectiveness leading to loss of motorcycle control and an accident.

Do not coast with the engine switched off, and do not tow the motorcycle.

The transmission is pressure lubricated only when the engine is running.

Inadequate lubrication may cause damage or seizure of the transmission, which can lead to sudden loss of motorcycle control and an accident.

When using the motorcycle on loose, wet, or muddy roads, braking effectiveness will be reduced by dust, mud or moisture collecting on the brakes.

Always brake earlier in these conditions to make sure that brake surfaces are cleaned by the braking action.

Riding the motorcycle with brakes contaminated with dust, mud or moisture may cause loss of motorcycle control and an accident.
How to Ride the Motorcycle

Anti-Lock Braking System (ABS)

**Warning**

ABS prevents the wheels from locking, therefore maximizing the effectiveness of the braking system in emergencies and when riding on slippery surfaces. The potentially shorter braking distances ABS allows under certain conditions are not a substitute for good riding practice.

Always ride within the legal speed limit.

Never ride without due care and attention and always reduce speed in consideration of weather, road and traffic conditions.

Take care when cornering. If the brakes are applied in a corner, ABS will not be able to counteract the weight and momentum of the motorcycle. This can result in loss of control and an accident.

Under some circumstances it is possible that a motorcycle equipped with ABS may require a longer stopping distance.

**Warning**

After riding off-road with ABS disabled, always make sure that the ABS is enabled when returning to ride on public roads.

Riding on public roads with the ABS disabled will, if braking too hard, cause the wheels to lock resulting in loss of motorcycle control and an accident.

**Note**

The ABS operation may feel like a harder pedal pressure or a pulsation of the brake lever and pedal.

The ABS is not an integrated braking system and does not control both the front and rear brake at the same time so this pulsation may be felt in the lever, the pedal or both.

The ABS may be activated by sudden upward or downward changes in the road surface.

**ABS Warning Light**

When the ignition switch is turned to the ON position, it is normal for the ABS warning light to flash on and off (see page 40). If the ABS warning light is constantly illuminated it indicates that the ABS function is not available because:

- The ABS has been disabled by the rider.
- The ABS has a malfunction that requires investigation.

If the indicator light becomes illuminated while riding, it indicates that the ABS has a malfunction that requires investigation.
Warning
If the ABS is not functioning, the brake system will continue to function as a non-ABS equipped brake system.
Do not continue to ride for longer than is necessary with the warning light illuminated.
Contact an authorized Triumph dealer as soon as possible to have the fault checked and rectified. In this situation braking too hard will cause the wheels to lock resulting in loss of motorcycle control and an accident.

Warning
The ABS warning light will illuminate when the rear wheel is driven at high speed for more than 30 seconds when the motorcycle is on a stand. This reaction is normal.
When the ignition is switched off and the motorcycle is restarted, the warning light will illuminate until the motorcycle reaches a speed exceeding 19 mph (30 km/h).

Warning
The ABS system operates by comparing the relative speed of the front and rear wheels.
Use of non-recommended tires can affect wheel speed and cause the ABS function not to operate, potentially leading to loss of control and an accident in conditions where the ABS would normally function.

Warning
Gasoline is extremely flammable and can be explosive under certain conditions.
If parking inside a garage or other structure, be sure it is well ventilated and the motorcycle is not close to any source of flame or sparks. This includes any appliance with a pilot light.
Failure to follow the above advice may cause a fire resulting in damage to property or personal injury.

Warning
The engine and exhaust system will be hot after riding.
DO NOT park where pedestrians and children are likely to touch the motorcycle.
Touching any part of the engine or exhaust system when hot may cause unprotected skin to become burnt.

Warning
Do not park on a soft or steeply inclined surface.
How to Ride the Motorcycle

**Warning Continued**

Parking under these conditions may cause the motorcycle to fall over causing damage to property and personal injury.

To park the motorcycle:

- Select neutral and turn the ignition switch to the OFF position.
- Lock the steering to help prevent theft.
- Always park on a firm, level surface to prevent the motorcycle from falling. This is particularly important when parking off-road.
- When parking on a hill, always park facing uphill to prevent the motorcycle from rolling off the stand. Engage first gear to prevent the motorcycle from moving.
- On a lateral (sideways) incline, always park such that the incline naturally pushes the motorcycle towards the side stand.
- Do not park on a lateral (sideways) incline of greater than 6° and never park facing downhill.

**Considerations for High Speed Operation**

**Warning**

This Triumph motorcycle should be operated within the legal speed limits for the particular road traveled.

Operating a motorcycle at high speeds can be potentially dangerous since the time available to react to given traffic situations is greatly reduced as road speed increases.

Always reduce speed in potentially hazardous driving conditions such as bad weather or heavy traffic.

**Warning**

Only operate this Triumph motorcycle at high speed in closed-course on-road competition or on closed-course racetracks.

High speed operation should only then be attempted by riders who have been instructed in the techniques necessary for high speed riding and are familiar with the motorcycle’s characteristics in all conditions.

High speed operation in any other circumstances is dangerous and will lead to loss of motorcycle control and an accident.
How to Ride the Motorcycle

⚠️ Warning
The handling characteristics of a motorcycle at high speed may vary from those you are familiar with at legal road speeds.
Do not attempt high speed operation unless you have received sufficient training and have the required skills as a serious accident may result from incorrect operation.

⚠️ Warning
The items listed below are extremely important and must never be neglected. A problem, which may not be noticed at normal operating speeds, may be greatly exaggerated at high speeds.

General
Make sure that the motorcycle has been maintained according to the scheduled maintenance chart.

Brakes
Check that the front and rear brakes are functioning correctly.

Coolant
Check that the coolant level is at the upper level line in the expansion tank. Always check the level with the engine cold.

Electrical Equipment
Make sure that all electrical equipment such as the headlight, rear/brake light, turn signals and horn all work correctly.

Engine Oil
Check that the engine oil level is correct. Make sure that the correct grade and type of oil is used when topping off.

Drive Chain
Make sure that the drive chain is correctly adjusted and lubricated. Inspect the chain for wear and damage.

Fuel
Have sufficient fuel for the increased fuel consumption that will result from high speed operation.

⚠️ Caution
In many countries, the exhaust system for this model is equipped with a catalytic converter to help reduce exhaust emission levels.
The catalytic converter can be permanently damaged if the motorcycle is allowed to run out of fuel or if the fuel level is allowed to get very low.
Always make sure you have adequate fuel for your trip.
How to Ride the Motorcycle

Luggage
Make sure that any luggage containers are closed, locked and securely installed on the motorcycle.

Miscellaneous
Visually check that all fasteners are tight.

Steering
Check that the handlebar turns smoothly without excessive free play or tight spots. Make sure that the control cables do not restrict the steering in any way.

Tires
High speed operation is hard on tires, and tires that are in good condition are crucial to riding safely. Examine their overall condition, inflate to the correct pressure (when the tires are cold), and check the wheel balance. Securely install the valve caps after checking tire pressures. Observe the information given in the maintenance and specification sections on tire checking and tire safety.
Accessories, Loading and Passengers

The addition of accessories and carrying of additional weight can affect the motorcycle’s handling characteristics causing changes in stability and necessitating a reduction in speed. The following information has been prepared as a guide to the potential hazards of adding accessories to a motorcycle and carrying passengers and additional loads.

Accessories

⚠️ Warning
Do not install accessories or carry luggage that impairs the control of the motorcycle.
Make sure that you have not adversely affected any lighting component, road clearance, banking capability (i.e. lean angle), control operation, wheel travel, front fork movement, visibility in any direction, or any other aspect of the motorcycle’s operation.

⚠️ Warning
Owners should be aware that the only approved parts, accessories and conversions for any Triumph motorcycle are those which carry official Triumph approval and are installed to the motorcycle by an authorized dealer.

In particular, it is extremely hazardous to install or replace parts or accessories whose installation requires the dismantling of, or addition to, either the electrical or fuel systems and any such modification could cause a safety hazard.

The installation of any non-approved parts, accessories or conversions may adversely affect the handling, stability or other aspect of the motorcycle operation that may result in an accident causing injury or death.

Triumph does not accept any liability whatsoever for defects caused by the installation of non-approved parts, accessories or conversions or the installation of any approved parts, accessories or conversions by non-approved personnel.
Accessories, Loading and Passengers

⚠️ Warning

Install only genuine Triumph accessories to the correct Triumph motorcycle model.
Always check the Triumph Fitting Instruction associated with the genuine Triumph accessory. Make sure the Triumph motorcycle model that the Triumph accessory is to be installed on, is listed as approved for the genuine Triumph accessory. For all Triumph Fitting Instructions, see www.triumphinstructions.com.

Never install genuine Triumph accessories to a Triumph motorcycle model that is not listed in the associated Triumph Fitting Instruction, as this may affect handling, stability or other aspects of the motorcycle operation that may result in an accident causing severe injuries or death.

⚠️ Warning

Never ride an accessory equipped motorcycle, or a motorcycle carrying a payload of any kind, at speeds above 80 mph (130 km/h). In either/both of these conditions, speeds in excess of 80 mph (130 km/h) should not be attempted even where the legal speed limit permits this.

The presence of accessories and/or payload will cause changes in the stability and handling of the motorcycle.

Failure to allow for changes in motorcycle stability may lead to loss of motorcycle control and an accident. When riding at high speed, always be aware that various motorcycle configuration and environmental factors can adversely affect the stability of your motorcycle. For example:

- Incorrectly balanced loads on both sides of the motorcycle
- Incorrectly adjusted front and rear suspension settings
- Incorrectly adjusted tire pressures
- Excessively or unevenly worn tires
- Side winds and turbulence from other vehicles
- Loose clothing.

Remember that the 80 mph (130 km/h) absolute limit will be reduced by the installation of non-approved accessories, incorrect loading, worn tires, overall motorcycle condition and poor road or weather conditions.
Accessories, Loading and Passengers

Loading

⚠️ Warning
Always make sure that any loads carried are evenly distributed on both sides of the motorcycle. Make sure that the load is correctly secured so that it will not move around while the motorcycle is in motion.

Evenly distribute the load within each pannier (if equipped). Pack heavy items at the bottom and on the inboard side of the pannier.

Always check the load security regularly (though not while the motorcycle is in motion) and make sure that the load does not extend beyond the rear of the motorcycle.

Never exceed the maximum vehicle loading weight as specified in the Specifications section.

This maximum loading weight is made up from the combined weight of the rider, passenger, any accessories installed and any load carried.

For models that have adjustable suspension settings, make sure that front and rear spring preload and damping settings are suitable for the loading condition of the motorcycle.

Note the maximum permissible payload for the panniers is stated on a label inside the pannier.

Incorrect loading may result in an unsafe riding condition leading to an accident.

⚠️ Warning
The maximum safe load for each pannier is stated on a label inside the pannier.
Never exceed this loading limit as this may cause the motorcycle to become unstable leading to loss of motorcycle control and an accident.

⚠️ Warning
Never attempt to store any items between the frame and the fuel tank.
This can restrict the steering and will cause loss of control leading to an accident.

Weight attached to the handlebar or front fork will increase the mass of the steering assembly and can result in loss of steering control leading to an accident.
Accessories, Loading and Passengers

**Warning**

If the passenger seat is used to carry small objects, they must not exceed 11 lb (5 kg) in weight, must not impair control of the motorcycle, must be securely attached and must not extend beyond the rear or sides of the motorcycle.

Carrying objects in excess of 11 lb (5 kg) in weight, that are insecure, impair control or extend beyond the rear or sides of the motorcycle may lead to loss of motorcycle control and an accident.

Even if small objects are correctly loaded onto the passenger seat, the maximum speed of the motorcycle must be reduced to 80 mph (130 km/h).

**Passengers**

**Warning**

The handling and braking capabilities of a motorcycle will be affected by the presence of a passenger.

The rider must make allowances for these changes when operating the motorcycle with a passenger and should not attempt such operation unless trained to do so and without becoming familiar and comfortable with the changes in motorcycle operating characteristics that this brings about.

Motorcycle operation without making allowances for the presence of a passenger could lead to loss of motorcycle control and an accident.

**Warning**

Do not carry a passenger unless they are tall enough to reach the footrests provided.

A passenger who is not tall enough to reach the footrests will be unable to sit securely on the motorcycle and may cause instability leading to loss of control and an accident.
Warning

Your passenger should be instructed that they can cause loss of motorcycle control by making sudden movements or by adopting an incorrect seated position.

The rider should instruct the passenger as follows:

- It is important that the passenger sits still while the motorcycle is in motion and does not interfere with the operation of the motorcycle.
- To keep their feet on the passenger footrests and to firmly hold onto the seat strap or the rider’s waist or hips.
- Advise the passenger to lean with the rider when traveling around corners and not to lean unless the rider does so.

Warning

The handling and braking capabilities of a motorcycle will be affected by the presence of a passenger.

The rider must make allowances for these changes when operating the motorcycle with a passenger and should not attempt such operation unless trained to do so and without becoming familiar and comfortable with the changes in motorcycle operating characteristics that this brings about.

Motorcycle operation without making allowances for the presence of a passenger could lead to loss of motorcycle control and an accident.

Warning

Do not carry animals on your motorcycle.
An animal could make sudden and unpredictable movements that could lead to loss of motorcycle control and an accident.

 Scheduled Maintenance

**Warning**

Triumph Motorcycles cannot accept any responsibility for damage or injury resulting from incorrect maintenance or improper adjustment carried out by the owner.

Incorrect or neglected maintenance can lead to a dangerous riding condition.

Always have an authorized Triumph dealer carry out the scheduled maintenance of this motorcycle.

**Warning**

All maintenance is vitally important and must not be neglected. Incorrect maintenance or adjustment may cause one or more parts of the motorcycle to malfunction. A malfunctioning motorcycle may lead to loss of control and an accident.

Weather, terrain and geographical location affect maintenance. The maintenance schedule should be adjusted to match the particular environment in which the motorcycle is used and the demands of the individual owner.

Special tools, knowledge and training are required in order to correctly carry out the maintenance items listed in the scheduled maintenance chart. Only an authorized Triumph dealer will have this knowledge and equipment.

Incorrect or neglected maintenance can lead to a dangerous riding condition. Always have an authorized Triumph dealer carry out the scheduled maintenance of this motorcycle.

To maintain the motorcycle in a safe and reliable condition, the maintenance and adjustments outlined in this section must be carried out as specified in the schedule of daily checks, and also in line with the scheduled maintenance chart. The information that follows describes the procedures to follow when carrying out the daily checks and some simple maintenance and adjustment items.
Scheduled maintenance may be carried out by your authorized Triumph dealer in three ways: annual maintenance, mileage based maintenance or a combination of both, depending on the mileage the motorcycle travels each year.

1. Motorcycles traveling less than 6,000 miles (10,000 km) per year must be maintained annually. In addition to this, mileage based items require maintenance at their specified intervals, as the motorcycle reaches this mileage.

2. Motorcycles traveling approximately 6,000 miles (10,000 km) per year must have the annual maintenance and the specified mileage based items carried out together.

3. Motorcycles traveling more than 6,000 miles (10,000 km) per year must have the mileage based items maintained as the motorcycle reaches the specified mileage. In addition to this, annual based items will require maintenance at their specified annual intervals.

In all cases maintenance must be carried out at or before the specified maintenance intervals shown. Consult an authorized Triumph dealer for advice on which maintenance schedule is most suitable for your motorcycle.

Triumph Motorcycles cannot accept any responsibility for damage or injury resulting from incorrect maintenance or improper adjustment.

**Service Symbol/General Warning Symbol**

The service symbol will illuminate for five seconds after the motorcycle start up sequence as a reminder that a service is due in approximately 60 miles (100 km). The service symbol will illuminate permanently when the mileage is reached, it will remain permanently illuminated until the service interval is reset using the Triumph Diagnostic tool.

The general warning symbol will flash if an ABS or engine management fault has occurred and the ABS and/or MIL warning lights are illuminated. Contact an authorized Triumph dealer as soon as possible to have the fault checked and rectified.

Maintenance

Engine Oil

⚠️ Warning

Motorcycle operation with insufficient, deteriorated, or contaminated engine oil will cause accelerated engine wear and may result in engine or transmission seizure. Seizure of the engine or transmission may lead to sudden loss of motorcycle control and an accident.

In order for the engine, transmission, and clutch to function correctly, maintain the engine oil at the correct level, and change the engine oil and oil filter in accordance with scheduled maintenance requirements.

Sump Guard

The sump guard must be removed to allow access to change the engine oil and oil filter.

Tiger 900 Rally Pro Only

1. Sump guard
2. Left hand side fixings
3. Bottom fixings

To remove the sump guard:
- Remove the two left hand side fixings. Note the orientation of the flanged sleeve for installation.
- Remove the two bottom fixings and remove the sump guard.

To reinstall the sump guard:
- Align the sump guard to the motorcycle and secure with the two bottom fixings. Do not fully tighten at this stage.
- Reinstall the two left hand side fixings and tighten to 53 lbf in (6 Nm).
- Tighten the bottom fixings to 53 lbf in (6 Nm).
1. **Sump guard**
2. **Left hand side fixings**
3. **Bottom fixings**

To remove the sump guard:
- Remove the two left hand side fixings.
- Remove the two bottom fixings and remove the sump guard.

To reinstall the sump guard:
- Align the sump guard to the motorcycle and secure with the two bottom fixings. Do not fully tighten at this stage.
- Reinstall the two left hand side fixings and tighten to 53 lbf in (6 Nm).
- Tighten the bottom fixings to 53 lbf in (6 Nm).

---

**Engine Oil Level Inspection**

**Warning**

Never start the engine or run the engine in a confined area. Exhaust fumes are poisonous and can cause loss of consciousness and death within a short period of time. Always operate the motorcycle in the open air or in an area with adequate ventilation.

**Warning**

If the engine has recently been running, the exhaust system will be hot. Before working on or near the exhaust system, allow sufficient time for the exhaust system to cool as touching any part of a hot exhaust system could cause burn injuries.
Caution

Running the engine with insufficient engine oil will cause engine damage. If the low oil pressure indicator remains on, stop the engine immediately and investigate the situation.

1. Filler
2. Sight glass
3. Engine oil level (correct level shown)
4. Crankcase engine oil level lines

To inspect the engine oil level:
- Start the engine and run at idle for approximately five minutes.
- Stop the engine, then wait for at least three minutes for the engine oil to settle.
- Note the engine oil level visible in the sight glass.
- When correct, engine oil should be visible in the sight glass at a point midway between the upper (maximum) and lower (minimum) horizontal lines marked on the crankcase.

Note
An accurate indication of the level of engine oil in the engine is only shown when the engine is at normal operating temperature and the motorcycle is upright (not on the side stand).

- If it is necessary to top off the engine oil level, remove the filler plug and add engine oil, a little at a time, until the level registered in the sight glass is correct.
- Once the correct level is reached, install and tighten the filler plug.

Engine Oil and Oil Filter Change

Warning
Prolonged or repeated contact with engine oil can lead to skin dryness, irritation and dermatitis.

Used engine oil contains harmful contamination that can lead to skin cancer.

Always wear suitable protective clothing and avoid skin contact with used oil.

Warning
The engine oil may be hot.
Avoid contact with the hot engine oil by wearing suitable protective clothing, gloves and eye protection.

Contact with hot engine oil may cause the skin to be scalded or burned.

The engine oil and filter must be replaced in accordance with scheduled maintenance requirements.
Note
The sump guard must be removed before starting this procedure, see page 126.

1. Engine oil filter
2. Engine oil drain plug

To change the engine oil and engine oil filter:
- Warm up the engine thoroughly, and then stop the engine and secure the motorcycle in an upright position on level ground.
- Place an oil drain pan beneath the engine.
- Remove the engine oil drain plug.
- Unscrew and remove the engine oil filter using Triumph service tool T3880313. Dispose of the old engine oil filter in an environmentally friendly way.
- Apply a thin smear of clean engine oil to the sealing ring of the new engine oil filter. Install the engine oil filter and tighten to 89 lbf in (10 Nm).
- After the engine oil has completely drained out, install a new sealing washer to the drain plug. Install and tighten the drain plug to 18 lbf ft (25 Nm).
- Fill the engine with a 10W/40 or 10W/50 semi or fully synthetic motorcycle engine oil that meets specification API SH (or higher) and JASO MA, such as Castrol Power 1 Racing 4T 10W-40 (fully synthetic).
- Start the engine and allow it to idle for a minimum of 30 seconds.

⚠️ Caution
Raising the engine speed above idle before the oil reaches all parts of the engine can cause engine damage or seizure.
Only raise engine speed after running the engine for 60 seconds to allow the engine oil to circulate fully.

⚠️ Caution
If the engine oil pressure is too low, the low oil pressure warning light will illuminate. If this light stays on when the engine is running, stop the engine immediately and investigate the cause.
Running the engine with low oil pressure will cause engine damage.

- Make sure that the low oil pressure warning light remains off and the engine oil pressure message is not shown in the instrument display screen.
- Stop the engine and recheck the oil level. Adjust if necessary.
Maintenance

Disposal of Used Engine Oil and Oil Filters

To protect the environment, do not pour oil on the ground, down sewers or drains, or into groundwater sources. Do not place used oil filters in with general waste. If in doubt, contact your local authority.

Engine Oil Specification and Grade (10W/40 & 10W/50)

Triumph’s high performance fuel injected engines are designed to use 10W/40 or 10W/50 semi or fully synthetic motorcycle engine oil that meets specification API SH (or higher) and JASO MA, such as Castrol Power 1 Racing 4T 10W-40 (fully synthetic) engine oil, sold as Castrol Power RS Racing 4T 10W-40 (fully synthetic) in some countries.

Refer to the chart below for the correct oil viscosity (10W/40 or 10W/50) to be used in your riding area.

Do not use mineral, vegetable, non-detergent oil, castor based oils or any oil not conforming to the required specification. The use of these oils may cause instant, severe engine damage.

Make sure that no foreign matter enters the crankcase during an engine oil change or top off.

Oil Viscosity Temperature Range

Do not add any chemical additives to the engine oil. The engine oil also lubricates the clutch and any additives could cause the clutch to slip.
Cooling System

To ensure efficient engine cooling, check the coolant level each day before riding the motorcycle, and top off the coolant if the level is low.

Note

A year round, Hybrid Organic Acid Technology (known as Hybrid OAT or HOAT) coolant is installed in the cooling system when the motorcycle leaves the factory. It is colored green, contains a 50% solution of ethylene glycol based antifreeze, and has a freezing point of -31°F (-35°C).

Corrosion Inhibitors

Warning

HD4X Hybrid OAT coolant contains corrosion inhibitors and antifreeze suitable for aluminum engines and radiators. Always use the coolant in accordance with the instructions of the manufacturer.

Coolant that contains anti-freeze and corrosion inhibitors contains toxic chemicals that are harmful to the human body. Never swallow antifreeze or any of the motorcycle coolant.

Note

HD4X Hybrid OAT coolant, as supplied by Triumph, is premixed and does not need to be diluted prior to filling or topping off the cooling system.

To protect the cooling system from corrosion, the use of corrosion inhibitor chemicals in the coolant is essential.

If coolant containing a corrosion inhibitor is not used, the cooling system will accumulate rust and scale in the water jacket and radiator. This will block the coolant passages, and considerably reduce the efficiency of the cooling system.

Coolant Level Inspection

The coolant expansion tank can be viewed from the left hand side of the motorcycle, below and towards the front of the fuel tank.

The coolant level should be checked when the engine is cold (at room or ambient temperature).
Maintenance

To inspect the coolant level:

- Position the motorcycle on level ground and in an upright position (not on the stand).
- Check the coolant level in the expansion tank.
- The coolant level must be between the MAX and MIN marks. If the coolant is below the minimum level, the coolant level must be adjusted.

Coolant Level Adjustment

Warning
Do not remove the expansion tank or radiator pressure cap when the engine is hot.

When the engine is hot, the coolant inside the radiator will be hot and also under pressure. Contact with this hot, pressurized coolant will cause scalds and skin damage.

Caution
If hard water is used in the cooling system, it will cause scale accumulation in the engine and radiator and considerably reduce the efficiency of the cooling system. Reduced cooling system efficiency may cause the engine to overheat and suffer severe damage.

To adjust the coolant level:

- Allow the engine to cool.
- The expansion tank cap can be removed from the right hand side of the motorcycle, between the front of the fuel tank and the frame.
- Remove the cap from the expansion tank and add coolant mixture through the filler opening until the level reaches the MAX mark.
- Reinstall the cap.
Note
If the coolant level is being checked because the coolant has overheated, also check the level in the radiator and top off if necessary.
In an emergency, distilled water can be added to the cooling system. However, the coolant must then be drained and replenished with HD4X Hybrid OAT coolant as soon as possible.

Coolant Change
It is recommended that the coolant is changed by an authorized Triumph dealer in accordance with scheduled maintenance requirements.

Radiator and Hoses

Warning
The fan operates automatically when the engine is running.
Always keep hands and clothing away from the fan.
Contact with the rotating fan may cause an accident and/or personal injury.

Caution
Using high pressure water sprays, such as from a car wash facility or household pressure washer, can damage the radiator fins, cause leaks and impair the radiator’s efficiency.
Do not obstruct or deflect airflow through the radiator by installing unauthorized accessories, either in front of the radiator or behind the cooling fan.
Interference with the radiator airflow can cause overheating, potentially resulting in engine damage.

Check the radiator hoses for cracks or deterioration, and tension clips for tightness in accordance with scheduled maintenance requirements. Have your authorized Triumph dealer replace any defective items.
Check the radiator grille and fins for obstructions by insects, leaves or mud. Clean off any obstructions with a stream of low pressure water.
Maintenance

Throttle Control

⚠️ Warning
Always be alert for changes in the 'feel' of the throttle control and have the throttle system checked by an authorized Triumph dealer if any changes are detected.

Changes can be due to wear in the mechanism, which could lead to a sticking throttle control.

A sticking or stuck throttle control will lead to loss of motorcycle control and an accident.

Clutch
The motorcycle is equipped with a cable-operated clutch.

If the clutch lever has excessive free play, the clutch may not disengage fully. This will cause difficulty in shifting gear and selecting neutral. This may cause the engine to stall and make the motorcycle difficult to control.

Conversely, if the clutch lever has insufficient free play the clutch may not engage fully, causing the clutch to slip, which will reduce performance and cause premature clutch wear.

Clutch lever free play must be checked in accordance with scheduled maintenance requirements.

Clutch Inspection
Check that there is 0.08–0.12 in (2–3 mm) clutch lever free play at the lever.

If there is an incorrect amount of free play, adjustments must be made.

Clutch Adjustment
To adjust the clutch:

• Turn the adjuster sleeve until the correct amount of clutch lever free play is achieved.

• Check that there is 0.08–0.12 in (2–3 mm) clutch lever free play at the lever.
• If there is an incorrect amount of free play, adjustments must be made.

![Diagram of clutch adjustment]

1. Adjuster sleeve (lock nut fully loosened)
2. Correct clearance 0.08–0.12 in (2–3 mm)
3. Clutch lever

• If correct adjustment cannot be made using the lever adjuster, use the cable adjuster at the lower end of the cable.
• Loosen the adjuster lock nut.
• Turn the outer cable adjuster to give 0.08–0.12 in (2–3 mm) of free play at the clutch lever.
• Tighten the locknut to 31 lbf in (3.5 Nm).

1. Clutch cable
2. Lock nut
3. Adjuster nut

---

**Drive Chain**

![Diagram of clutch cable]

**Warning**

A loose or worn chain, or a chain that breaks or jumps off the sprockets could catch on the engine sprocket or lock the rear wheel.

A chain that snags on the engine sprocket will injure the rider and lead to loss of motorcycle control and an accident.

Similarly, locking the rear wheel will lead to loss of motorcycle control and an accident.

For safety and to prevent excessive wear the drive chain must be checked, adjusted and lubricated in accordance with the scheduled maintenance requirements. Checking, adjustment and lubrication must be carried out more frequently for extreme conditions such as high speed riding, salty or heavily gritted roads.

If the chain is badly worn or incorrectly adjusted (either too loose or too tight) the chain could jump off the sprockets or break. Therefore, always replace worn or damaged chains using genuine Triumph parts supplied by an authorized Triumph dealer.
Maintenance

Drive Chain Lubrication

Lubrication is necessary every 200 miles (300 km) and also after riding in wet weather, on wet roads, or any time that the chain appears dry.

To lubricate the drive chain:

• Use the special drive chain lubricant as recommended in the Specifications section.
• Apply lubricant to the sides of the rollers then allow the motorcycle to stand unused for at least eight hours (overnight is ideal). This will allow the lubricant to penetrate to the drive chain O-rings etc.
• Before riding, wipe off any excess lubricant.
• If the drive chain is especially dirty, clean first and then apply lubricant as mentioned above.

Caution

Do not use a pressure washer to clean the drive chain as this may cause damage to the drive chain components.

Drive Chain Free Movement Inspection

Warning

Before starting work, make sure the motorcycle is stabilized and adequately supported.

This will help prevent it from falling and causing personal injury and/or damage to the motorcycle.

1. Maximum movement position

To inspect the drive chain free movement:

• Place the motorcycle on a level surface and hold it in an upright position with no weight on it.
• Rotate the rear wheel by pushing the motorcycle to find the position where the drive chain is tightest, and measure the vertical movement of the drive chain midway between the sprockets.
Drive Chain Free Movement Adjustment

The vertical movement of the drive chain must be in the range shown in the following table.

<table>
<thead>
<tr>
<th>Model</th>
<th>Vertical Movement Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tiger 900 GT (LRH)</td>
<td>0.79–1.18 in (20–30 mm)</td>
</tr>
<tr>
<td>Tiger 900 GT</td>
<td>0.98–1.38 in (25–35 mm)</td>
</tr>
<tr>
<td>Tiger 900 GT Pro</td>
<td></td>
</tr>
<tr>
<td>Tiger 900 Rally</td>
<td>1.18–1.57 in (30–40 mm)</td>
</tr>
<tr>
<td>Tiger 900 Rally Pro</td>
<td></td>
</tr>
</tbody>
</table>

To adjust the drive chain free movement:

- Loosen the wheel spindle nut.
- Loosen the lock nuts on both the left hand and right hand drive chain adjuster bolts.
- Moving both adjusters by an equal amount, turn the adjuster bolts clockwise to increase drive chain free movement and counterclockwise to reduce drive chain free movement.
- When the correct amount of drive chain free movement has been set, push the wheel into firm contact with the adjusters.
- Tighten both adjuster lock nuts to 15 lbf ft (20 Nm) and the rear wheel spindle nut to 81 lbf ft (110 Nm).
- Repeat the drive chain adjustment check. Readjust if necessary.

**Warning**

Operation of the motorcycle with insecure adjuster lock nuts or a loose wheel spindle may result in impaired stability and handling of the motorcycle.

This impaired stability and handling may lead to loss of control or an accident.

- Check the rear brake effectiveness. Rectify if necessary.

**Warning**

It is dangerous to operate the motorcycle with defective brakes; you must have your authorized Triumph dealer take remedial action before you attempt to ride the motorcycle again. Failure to take remedial action may reduce braking efficiency leading to loss of motorcycle control or an accident.
Warning

Never neglect drive chain maintenance and always have drive chains installed by an authorized Triumph dealer.

Use a genuine Triumph supplied drive chain as specified in the Triumph Parts Catalog.

The use of non-approved drive chains may result in a broken drive chain or may cause the drive chain to jump off the sprockets leading to loss of motorcycle control or an accident.

Caution

If the sprockets are found to be worn, always replace the sprockets and drive chain together.

Replacing worn sprockets without also replacing the drive chain will lead to premature wear of the new sprockets.

To inspect the drive chain and sprocket wear:

- Remove the drive chain guard.
- Stretch the drive chain taut by hanging a 20–40 lb (10–20 kg) weight on the drive chain.
- Measure the length of 20 links on the straight part of the drive chain from pin center of the 1st pin to the pin center of the 21st pin. Since the drive chain may wear unevenly, take measurements in several places.
- If the length exceeds the maximum service limit of 12.56 in (319 mm), the drive chain must be replaced.
- Rotate the rear wheel and inspect the drive chain for damaged rollers, and loose pins and links.
- Also inspect the sprockets for unevenly or excessively worn or damaged teeth.

1. Measure across 20 links
2. Weight

(Sprocket wear exaggerated for illustrative purposes)

- If there is any irregularity, have the drive chain and/or the sprockets replaced by an authorized Triumph dealer.
- Reinstall the drive chain guard, tightening the fasteners to 80 lbf in (9 Nm).
Brakes

Brake Wear Inspection

1. Brake pads
2. Minimum thickness line

Brake pads must be inspected in accordance with scheduled requirements and replaced if worn to, or beyond the minimum service thickness.

If the lining thickness of any brake pad (front or rear brakes) is less than 0.06 in (1.5 mm), that is, if the brake pad has worn down to the bottom of the grooves, replace all the brake pads on the wheel.

Warning

Brake pads must always be replaced as a wheel set. At the front, where two calipers are installed on the same wheel, replace all the brake pads in both calipers.

Replacing individual pads will reduce braking efficiency and may cause an accident.

After replacement brake pads have been installed, ride with extreme caution until the new pads have 'broken in'.

Breaking-in New Brake Pads and Discs

New brake discs and pads require a period of careful breaking-in that will optimize the performance and longevity of the discs and pads. The recommended distance for breaking-in new pads and discs is 200 miles (300 km).

During this period, avoid extreme braking, ride with caution and allow for greater braking distances.
Maintenance

Brake Pad Wear Compensation

⚠️ Warning
If the brake lever or pedal feels soft when it is applied, or if the lever/pedal travel becomes excessive, there may be air in the brake lines and hoses or the brakes may be defective.

It is dangerous to operate the motorcycle under such conditions and your authorized Triumph dealer must rectify the fault before riding.

Riding with defective brakes may lead to loss of motorcycle control and an accident.

Disc and brake pad wear is automatically compensated for and has no effect on the brake lever or pedal action. There are no parts that require adjustment on the front and rear brakes.

Disc Brake Fluid

⚠️ Warning
Brake fluid is hygroscopic which means it will absorb moisture from the air.

Any absorbed moisture will greatly reduce the boiling point of the brake fluid causing a reduction in braking efficiency.

Because of this, always replace brake fluid in accordance with scheduled maintenance requirements.

Always use new brake fluid from a sealed container and never use fluid from an unsealed container or from one which has been previously opened.

Do not mix different brands or grades of brake fluid.

Check for fluid leakage around brake installed, seals and joints and also check the brake hoses for splits, deterioration and damage.

Always rectify any faults before riding.

Failure to observe and act upon any of these items may cause a dangerous riding condition leading to loss of control and an accident.
Warning
If the ABS is not functioning, the brake system will continue to function as a non-ABS equipped brake system.
In this situation, braking too hard will cause the wheels to lock resulting in loss of control and an accident.
Reduce speed and do not continue to ride for longer than is necessary with the indicator light illuminated. Contact an authorized Triumph dealer as soon as possible to have the fault checked and rectified.

Inspect the level of brake fluid in both reservoirs and change the brake fluid in accordance with scheduled maintenance requirements. Use only DOT 4 fluid as recommended in the Specification section. The brake fluid must also be changed if it becomes, or is suspected of having become contaminated with moisture or any other contaminants.

Note
A special tool is required to bleed the ABS braking system. Contact your authorized Triumph dealer when the brake fluid needs replacing or the hydraulic system requires maintenance.

Front Brake Fluid Level Inspection and Adjustment

Warning
If there has been an appreciable drop in the level of the fluid in either fluid reservoir, consult your authorized Triumph dealer for advice before riding.
Riding with depleted brake fluid levels, or with a brake fluid leak is dangerous and will cause reduced brake performance potentially leading to loss of motorcycle control and an accident.

The front brake fluid reservoir is located on the right hand side handlebar.

1. Reservoir cap retaining screws
2. UPPER level line
3. LOWER level line

To inspect the front brake fluid level:
• Check the level of brake fluid visible in the reservoir.
• The brake fluid level in the reservoir must be kept between the UPPER and LOWER level lines (reservoir held horizontal).
Maintenance

To adjust the front brake fluid level:

- Loosen the reservoir cap retaining screws and remove the reservoir cap and the diaphragm seal.
- Fill the reservoir to the UPPER level line using new DOT 4 brake fluid from a sealed container.
- Install the diaphragm seal into the reservoir cap and make sure that the holes for the fasteners in the reservoir cap and the diaphragm seal are correctly aligned.

- Hold the assembly together and position the reservoir cap, diaphragm seal and reservoir cap retaining screws onto the reservoir.

1. Reservoir cap, diaphragm seal and reservoir cap retaining screws assembly
2. Reservoir

1. Reservoir cap
2. Diaphragm seal
3. Reservoir cap retaining screw holes

- Install the reservoir cap retaining screws into the reservoir cap and diaphragm seal assembly.

- Tighten the reservoir cap retaining screws to 6 lbf in (0.7 Nm).

⚠️ Warning

If the reservoir cap retaining screws are over tightened this can result in a brake fluid leak.

A dangerous riding condition leading to loss of motorcycle control and an accident could result if this warning is ignored.
Rear Brake Fluid Level Inspection and Adjustment

⚠️ Warning

If there has been an appreciable drop in the level of the fluid in either fluid reservoir, consult your authorized Triumph dealer for advice before riding. Riding with depleted brake fluid levels, or with a brake fluid leak is dangerous and will cause reduced brake performance potentially leading to loss of motorcycle control and an accident.

The reservoir is located on the right hand side for the motorcycle, forward of the exhaust intermediate pipe, below the rider’s seat.

| 1. Reservoir cap retaining screws |
| 2. UPPER level line |
| 3. LOWER level line |

To inspect the rear brake fluid level:
- Check the level of brake fluid visible in the reservoir.
- The brake fluid level must be kept between the UPPER and LOWER level lines (reservoir held horizontal).

To adjust the rear brake fluid level:
- Loosen the reservoir cap retaining screws.
- Remove the reservoir cap and the diaphragm seal, noting the position of the diaphragm seal for reinstalling.
- Fill the reservoir to the UPPER level line using new DOT 4 brake fluid from a sealed container.
- Reinstall the reservoir cap making sure that the diaphragm seal is correctly positioned between the reservoir cap and reservoir body.
- Replace the reservoir cap retaining screws and tighten to 13.3 lbf in (1.5 Nm).

Brake Light Switches

⚠️ Warning

Riding the motorcycle with defective brake lights is illegal and dangerous. An accident causing injury to the rider and other road users may result from use of a motorcycle with defective brake lights.

The brake light is activated independently by either the front or rear brake. If, with the ignition in the ON position, the brake light does not work when the front brake lever is pulled or the rear brake pedal is pressed, have your authorized Triumph dealer investigate and rectify the fault.
Maintenance

Steering Inspection

⚠️ Warning
Riding the motorcycle with incorrectly adjusted or defective steering head bearings is dangerous and may cause loss of motorcycle control and an accident.

⚠️ Warning
To prevent risk of injury from the motorcycle falling during the inspection, make sure that the motorcycle is stabilized and secured on a suitable support.

Do not exert extreme force against each wheel or rock each wheel vigorously as this may cause the motorcycle to become unstable and cause injury by falling from its support.

Make sure that the position of the support block will not cause damage to the motorcycle.

Steering Bearings Inspection

The steering head bearings must be lubricated and inspected in accordance with scheduled maintenance requirements. Always inspect the wheel bearings at the same time as the steering bearings.

Inspecting the Steering for Free Play

To inspect the steering:

- Position the motorcycle on level ground, in an upright position.
- Raise the front wheel above the ground and support the motorcycle.
- Standing at the front of the motorcycle, hold the lower end of the front forks and try to move them forward and backward.
- If any free play can be detected in the steering head bearings, ask your authorized Triumph dealer to inspect and rectify any faults before riding.
- Remove the support and place the motorcycle on the side stand.
Wheel Bearings Inspection

⚠️ Warning
Riding with worn or damaged front or rear wheel bearings is dangerous and may cause impaired handling and instability leading to an accident. If in doubt, have the motorcycle inspected by an authorized Triumph dealer before riding.

To inspect the wheel bearings:
• If the wheel bearings in the front or rear wheel allow play in the wheel hub, are noisy, or if the wheel does not turn smoothly, have your authorized Triumph dealer inspect the wheel bearings.
• The wheel bearings must be inspected at the intervals specified in the scheduled maintenance chart.
• Position the motorcycle on level ground, in an upright position.
• Raise the front wheel above the ground and support the motorcycle.
• Standing at the side of the motorcycle, gently rock the top of the front wheel from side to side.
• If any free play can be detected, ask your authorized Triumph dealer to inspect and rectify any faults before riding.
• Reposition the lifting device and repeat the procedure for the rear wheel.
• Remove the support and place the motorcycle on the side stand.

Front Suspension

⚠️ Warning
Riding the motorcycle with defective or damaged suspension is dangerous and may lead to loss of control and an accident.

⚠️ Warning
Never attempt to dismantle any part of the suspension units. All suspension units contain pressurized oil. Skin and eye damage can result from contact with the pressurized oil.

Front Suspension Adjustment

Tiger 900 Model
This motorcycle has no front suspension adjustment.

All Models except Tiger 900
The motorcycles are delivered from the factory with the front suspension set at the Solo (normal) riding setting, as detailed in the relevant suspension charts. The front suspension is adjustable and is described in the following sections.
Maintenance

Front Suspension Setting Charts

⚠️ Warning

Make sure that the correct balance between front and rear suspension is maintained.

Suspension imbalance could significantly change handling characteristics leading to loss of motorcycle control and an accident.

Refer to the tables for further information or consult your authorized Triumph dealer.

The motorcycle is delivered from the factory with the front suspension set at the Solo (normal) riding setting, as shown in the relevant front suspension setting chart. The Solo suspension settings provide a comfortable ride and good handling characteristics for general, solo riding.

The suspension settings charts show suggested settings for the front suspension and are only a guide. Setting requirements may vary for rider weight and personal preferences.

¹ Number of clicks counterclockwise from the fully clockwise (closed) position – noting that the first stop (click) is counted as 1.

### Diagram

1. **Spring preload adjuster**

To change the front spring preload setting:
- Rotate the spring preload adjuster clockwise to increase, or counterclockwise to decrease.
- Always count the number of turns forward from the fully counterclockwise position.
Front Suspension Compression Damping Adjustment

Tiger 900 Rally and Tiger 900 Rally Pro

The compression damping adjuster is located at the top of the right hand fork.

1. Compression damping adjuster
2. Fork top cap

To change the front compression damping setting:

- Rotate the compression damping adjuster clockwise to increase, or counterclockwise to decrease.
- Always count the number of clicks back from the fully clockwise (closed) position.

Front Suspension Compression Damping Adjustment

Tiger 900 GT, Tiger 900 GT (LRH) and Tiger 900 GT Pro

The compression damping adjuster is located at the top of the left hand fork.

1. Compression damping adjuster
2. Fork top cap

To change the front compression damping setting:

- Rotate the compression damping adjuster clockwise to increase, or counterclockwise to decrease.
- Always count the number of clicks back from the fully clockwise (closed) position.
Front Suspension Rebound Damping Adjustment

Tiger 900 Rally and Tiger 900 Rally Pro
The rebound damping adjuster is located at the top of the left hand fork.

1. Rebound damping adjuster
2. Fork top cap

To change the front rebound damping setting:
• Rotate the rebound damping adjuster clockwise to increase, or counterclockwise to decrease.
• Always count the number of clicks back from the fully clockwise (closed) position.

Front Suspension Rebound Damping Adjustment

Tiger 900 GT, Tiger 900 GT (LRH) and Tiger 900 GT Pro
The rebound damping adjuster is located at the top of the right hand fork.

1. Rebound damping adjuster
2. Fork top cap

To change the front rebound damping setting:
• Rotate the rebound damping adjuster clockwise to increase, or counterclockwise to decrease.
• Always count the number of clicks back from the fully clockwise (closed) position.
Maintenance

Front Fork Inspection

⚠️ Warning
Riding the motorcycle with defective or damaged suspension is dangerous and may lead to loss of control and an accident.

⚠️ Warning
Never attempt to dismantle any part of the suspension units.
All suspension units contain pressurized oil.
Skin and eye damage can result from contact with the pressurized oil.

To check that the forks operate smoothly:
- Position the motorcycle on level ground.
- While holding the handlebars and applying the front brake, pump the forks up and down several times.
- If roughness or excessive stiffness is detected, consult your authorized Triumph dealer.
- If any damage or leakage is found, consult your authorized Triumph dealer.
- Examine each fork for any sign of damage, scratching of the slider surface, or for oil leaks.
Rear Suspension

**Warning**
Riding the motorcycle with defective or damaged suspension is dangerous and may lead to loss of control and an accident.

**Warning**
Never attempt to dismantle any part of the suspension units. All suspension units contain pressurized oil. Skin and eye damage can result from contact with the pressurized oil.

Rear Suspension Setting Charts

**Warning**
Make sure that the correct balance between front and rear suspension is maintained. Suspension imbalance could significantly change handling characteristics leading to loss of motorcycle control and an accident. Refer to the tables for further information or consult your authorized Triumph dealer.

The motorcycle is delivered from the factory with the rear suspension set at the Solo (normal) riding settings, as shown in the relevant suspension chart. The Solo suspension settings provide a comfortable ride and good handling characteristics for general, solo riding.

The suspension settings charts show suggested settings for the rear suspension and are only a guide. Setting requirements may vary for rider weight and personal preferences.

An increase in spring preload requires firmer damping. A reduction in spring preload requires softer damping. The damping must be adjusted to the road conditions and the spring preload.
Maintenance

Tiger 900 GT Pro Suspension Settings
The Tiger 900 GT Pro has electronically adjustable preload and rebound damping suspension. This is adjusted in the Damping and Suspension menus in the instrument display. For more information, see page 71.

¹Number of adjuster turns clockwise from the fully counterclockwise position.
²Number of adjuster turns counterclockwise from the fully clockwise (closed) position.
Rear Suspension Spring Preload Adjustment

Tiger 900, Tiger 900 GT and Tiger 900 GT (LRH)

The spring preload adjuster is situated on the right hand side of the motorcycle, at the top of the rear suspension unit.

1. Spring preload adjuster

To change the spring preload setting:
- Rotate the spring preload adjuster clockwise to increase, or counterclockwise to decrease.
- The setting is measured as the number of adjuster turns clockwise from the fully counterclockwise position.

Rear Suspension Spring Preload Adjustment

Tiger 900 Rally and Tiger 900 Rally Pro

The spring preload adjuster is situated on the right hand side of the motorcycle, at the top of the rear suspension unit.

1. Spring preload adjuster

To change the spring preload setting:
- Rotate the spring preload adjuster clockwise to increase, or counterclockwise to decrease.
- The setting is measured as the number of adjuster turns clockwise from the fully counterclockwise position.
Rear Suspension Rebound Damping Adjustment

Tiger 900 GT and Tiger 900 GT (LRH)
The rebound damping adjuster is located at the bottom of the rear suspension unit and is accessible from the left hand side of the motorcycle.

1. Rebound damping adjuster

To change the rebound damping setting:
- Rotate the slotted adjuster clockwise to increase (harder suspension) and counterclockwise to decrease (softer suspension).
- The setting is measured as the number of adjuster turns counterclockwise from the fully clockwise position.

Rear Suspension Rebound Damping Adjustment

Tiger 900 Rally and Tiger 900 Rally Pro
The rebound damping adjuster is located at the bottom of the rear suspension unit and is accessible from the left hand side of the motorcycle.

1. Rebound damping adjuster

To change the rebound damping setting:
- Rotate the slotted adjuster clockwise to increase (harder suspension) and counterclockwise to decrease (softer suspension).
- The setting is measured as the number of adjuster turns counterclockwise from the fully clockwise position.
Bank Angle Indicators

⚠️ Warning
Always replace the bank angle indicators before they are worn to their maximum limit.
Use of a motorcycle with bank angle indicators worn beyond the maximum limit will allow the motorcycle to be banked to an unsafe angle.
Banking to an unsafe angle may cause instability, loss of motorcycle control and an accident.

⚠️ Warning
The bank angle indicators must not be used as a guide to how far the motorcycle may be safely banked.
This depends on many various conditions including, but not limited to, road surface, tire condition and weather. Banking to an unsafe angle may cause instability, loss of motorcycle control and an accident.

Bank angle indicators are located on the riders footrests.

1. Bank angle indicator
2. Maximum wear limit groove

Bank angle indicators must be replaced when they have worn down to the maximum wear limit. The maximum wear limit is shown by a groove on the bank angle indicator.
Regularly check the bank angle indicators for wear.
Maintenance

Tires

All model variants are equipped with tubeless tires, valves and wheel rims. Use only tires marked TUBELESS and tubeless valves on rims marked SUITABLE FOR TUBELESS TYRES.

⚠️ Warning

Do not install tube type tires on tubeless rims. The bead will not seat and the tires could slip on the rims, causing rapid tire deflation that may result in a loss of motorcycle control and an accident.

⚠️ Warning Continued

Never install an inner tube inside a tubeless tire without the appropriate marking. This will cause friction inside the tire and the resulting heat build-up may cause the tube to burst resulting in rapid tire deflation, loss of motorcycle control and an accident.
### Tire Inflation Pressures

**Warning**

Incorrect tire inflation will cause abnormal tread wear and instability problems that may lead to loss of control and an accident.

Under inflation may result in the tire slipping on, or coming off the rim. Overinflation will cause instability and accelerated tread wear.

Both conditions are dangerous as they may cause loss of control leading to an accident.

Correct inflation pressure will provide maximum stability, rider comfort and tire life. Always check tire pressures before riding when the tires are cold. Check tire pressures daily and adjust if necessary. See the Specification section for details of the correct inflation pressures.

### Tire Pressure Monitoring System (TPMS) (if equipped)

**Caution**

An adhesive label is installed to the wheel rim to indicate the position of the tire pressure sensor.

Care must be taken when replacing the tires to prevent any damage to the tire pressure sensors.

Always have your tires mounted by your authorized Triumph dealer and inform them that tire pressure sensors are installed on the wheels.

**Caution**

Do not use anti puncture fluid or any other item likely to obstruct air flow to the TPMS sensor’s orifices. Any blockage to the air pressure orifice of the TPMS sensor during operation will cause the sensor to become blocked, causing irreparable damage to the TPMS sensor assembly.

Damage caused by the use of anti puncture fluid or incorrect maintenance is not considered a manufacturing defect and will not be covered under warranty.

Always have your tires mounted by your authorized Triumph dealer and inform them that tire pressure sensors are installed on the wheels.
The tire pressures shown on your instruments indicate the actual tire pressure at the time of selecting the display. This may differ from the inflation pressure set when the tires are cold because tires become warmer during riding, causing the air in the tire to expand and increase the inflation pressure. The cold inflation pressures specified by Triumph take account of this.

Only adjust tire pressures when the tires are cold using an accurate pressure gage. Do not use the tire pressure display on the instruments.

**Tire Wear**

As the tire tread wears down, the tire becomes more susceptible to punctures and failure. It is estimated that 90% of all tire problems occur during the last 10% of tread life (90% worn). It is recommended that tires are changed before they are worn to their minimum tread depth.

---

### Minimum Recommended Tread Depth

<table>
<thead>
<tr>
<th></th>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Operation with excessively worn tires is hazardous and will adversely affect traction, stability and handling which may lead to loss of control and an accident.</td>
<td></td>
</tr>
<tr>
<td>When tubeless tires, used without a tube, become punctured, leakage is often very slow. Always inspect tires very closely for punctures. Check the tires for cuts, embedded nails or other sharp objects. Operation with punctured or damaged tires will adversely affect motorcycle stability and handling which may lead to loss of control or an accident.</td>
<td></td>
</tr>
<tr>
<td>Check the rims for dents or deformation. Operation with damaged or defective wheels or tires is dangerous and loss of motorcycle control or an accident could result.</td>
<td></td>
</tr>
<tr>
<td>Always consult your authorized Triumph dealer for tire replacement, or for a safety inspection of the tires.</td>
<td></td>
</tr>
</tbody>
</table>

In accordance with the periodic maintenance chart, measure the depth of the tread with a depth gage, and replace any tire that has worn to, or beyond the minimum allowable tread depth specified in the table below:

<table>
<thead>
<tr>
<th>Speed</th>
<th>Tread Depth</th>
</tr>
</thead>
<tbody>
<tr>
<td>Under 80 mph (130 km/h)</td>
<td>0.08 in (2 mm)</td>
</tr>
<tr>
<td>Over 80 mph (130 km/h)</td>
<td>Front 0.08 in (2 mm) Rear 0.12 in (3 mm)</td>
</tr>
</tbody>
</table>
Tire Replacement

All Triumph motorcycles are carefully and extensively tested in a range of riding conditions to ensure that the most effective tire combinations are approved for use on each model. It is essential that approved tires mounted in approved combinations, are used when purchasing replacement items. The use of non-approved tires or approved tires in non-approved combinations, may lead to motorcycle instability, loss of control and an accident.

A list of approved tires specific to your motorcycle are available from your authorized Triumph dealer, or on the Internet at www.triumph.co.uk. Always have tires mounted and balanced by your authorized Triumph dealer who has the necessary training and skills to ensure safe, effective mounting.

When replacement tires are required, consult your authorized Triumph dealer who will arrange for the tires to be selected, in a correct combination, from the approved list and mounted according to the tire manufacturer’s instructions.

Initially, the new tires will not produce the same handling characteristics as the worn tires and the rider must allow adequate riding distance (approximately 100 miles (160 km)) to become accustomed to the new handling characteristics.

The tire pressures must be checked and adjusted, and the tires examined for correct seating 24 hours after fitting. Rectification must be carried out as necessary. The same checks and adjustments must also be carried out when 100 miles (160 km) have been traveled after mounting.

⚠️ Warning

Do not install tube type tires on tubeless rims.
The bead will not seat and the tires could slip on the rims, causing rapid tire deflation that may result in a loss of motorcycle control and an accident.

Never install an inner tube inside a tubeless tire without the appropriate marking. This will cause friction inside the tire and the resulting heat build-up may cause the tube to burst resulting in rapid tire deflation, loss of motorcycle control and an accident.

⚠️ Warning

If a tire sustains a puncture, the tire must be replaced.

Failure to replace a punctured tire or operation with a repaired tire can lead to instability, loss of motorcycle control or an accident.
Warning

If tire damage is suspected, such as after striking the curb, ask your authorized Triumph dealer to inspect the tire both internally and externally. Tire damage may not always be visible from the outside. Operation of the motorcycle with damaged tires could lead to loss of control and an accident.

Warning

Use of a motorcycle with incorrectly seated tires, incorrectly adjusted tire pressures, or when not accustomed to its handling characteristics may lead to loss of motorcycle control and an accident.

Warning

The ABS system operates by comparing the relative speed of the front and rear wheels. Use of non-recommended tires can affect wheel speed and cause the ABS function not to operate, potentially leading to loss of motorcycle control and an accident in conditions where the ABS would normally function.

Warning

Accurate wheel balance is necessary for safe, stable handling of the motorcycle. Do not remove or change any wheel balance weights. Incorrect wheel balance may cause instability leading to loss of control and an accident. When wheel balancing is required, such as after tire replacement, see your authorized Triumph dealer. Only use self-adhesive weights. Clip on weights may damage the wheel or tire resulting in tire deflation, loss of motorcycle control and an accident.

Warning

Tires that have been used on a rolling road dynamometer may become damaged. In some cases, the damage may not be visible on the external surface of the tire. Tires must be replaced after such use as continued use of a damaged tire may lead to instability, loss of motorcycle control and an accident.
Battery

⚠️ Warning
The battery contains sulfuric acid (battery acid). Contact with skin or eyes may cause severe burns. Wear protective clothing and a face shield.
If battery acid gets on your skin, flush with water immediately.
If battery acid gets in your eyes, flush with water for at least 15 minutes and SEEK MEDICAL ATTENTION IMMEDIATELY.
If battery acid is swallowed, drink large quantities of water and SEEK MEDICAL ATTENTION IMMEDIATELY.
KEEP BATTERY ACID OUT OF THE REACH OF CHILDREN.

⚠️ Warning
Under certain circumstance the battery may release explosive gases. Make sure to keep all sparks, flames and cigarettes away from the battery.
Do not attach jump leads to the battery, touch the battery cables together or reverse the polarity of the cables, as any of these actions may cause a spark which would ignite battery gases causing a risk of personal injury.
Make sure that there is adequate ventilation when charging or using the battery in an enclosed space.

⚠️ Warning
The battery contains harmful materials. Always keep children away from the battery at all times.

Battery Removal

⚠️ Warning
Make sure that the battery terminals do not touch the motorcycle frame.
This may cause a short circuit or spark which would ignite battery gases causing a risk of personal injury.

To remove the battery:
• Remove the passenger seat, see page 88.
• Remove the rider’s seat, see page 89.

1. Tool kit tray (if equipped)
2. Diagnostic connector
3. Tool kit tray fastener
Maintenance

- Loosen and remove the tool kit tray fastener (if equipped with the tool kit tray).
- Lift the tool kit tray up and to the rear of the motorcycle until it stops in an upright position.

1. Positive (⁺) terminal
2. Battery strap
3. Battery cover
4. Negative (⁻) terminal

- Remove the battery strap.
- Remove the battery cover, noting the orientation of the cover and the leads.
- Disconnect the battery leads, negative lead first.
- Remove the battery out of the case.

Battery Disposal
Should the battery ever require replacement, the original battery must be handed to a recycling agent who will make sure that the dangerous substances from which the battery is manufactured do not pollute the environment.

Battery Maintenance

![Warning]

Battery acid is corrosive and poisonous and will cause damage to unprotected skin.

Never swallow battery acid or allow it to come into contact with the skin.

To prevent injury, always wear eye and skin protection when handling the battery.

The battery is a sealed type and does not require any maintenance other than checking the voltage and routine recharging when required, such as during storage.

Clean the battery using a clean, dry cloth. Make sure that the cable connections are clean.

It is not possible to adjust the battery acid level in the battery; the sealing strip must not be removed.
Battery Discharge

⚠️ Caution

The charge level in the battery must be maintained to maximize battery life. Failure to maintain the battery charge level could cause serious internal damage to the battery.

Under normal conditions, the motorcycle charging system will keep the battery fully charged. However, if the motorcycle is unused, the battery will gradually discharge due to a normal process called self discharge: the clock, Engine Control Module (ECM) memory, high ambient temperatures, or the addition of electrical security systems or other electrical accessories will all increase this rate of battery discharge. Disconnecting the battery from the motorcycle during storage will reduce the rate of discharge.

Battery Discharge During Storage and Infrequent Use of the Motorcycle

During storage or infrequent use of the motorcycle, inspect the battery voltage weekly using a multimeter. Follow the manufacturer’s instructions supplied with the meter.

Should the battery voltage fall below 12.7 Volts, the battery should be charged.

Allowing a battery to discharge or leaving it discharged for even a short period of time causes sulphation of the lead plates. Sulphation is a normal part of the chemical reaction inside the battery, however over time the sulphate can crystallize on the plates making recovery difficult or impossible. This permanent damage is not covered by the motorcycle warranty, as it is not due to a manufacturing defect.

Keeping the battery fully charged reduces the likelihood of it freezing in cold conditions. Allowing a battery to freeze will cause serious internal damage to the battery.
Battery Charging

⚠️ Warning
The battery gives off explosive gases; keep sparks, flames and cigarettes away. Provide adequate ventilation when charging or using the battery in an enclosed space.

The battery contains sulfuric acid (battery acid). Contact with skin or eyes may cause severe burns. Wear protective clothing and a face shield.

If battery acid gets on your skin, flush with water immediately.

If battery acid gets in your eyes, flush with water for at least 15 minutes and SEEK MEDICAL ATTENTION IMMEDIATELY.

If battery acid is swallowed, drink large quantities of water and SEEK MEDICAL ATTENTION IMMEDIATELY.

KEEP BATTERY ACID OUT OF THE REACH OF CHILDREN.

⚠️ Caution
Do not use an automotive quick charger as it may overcharge and damage the battery.

For help with selecting a battery charger, checking the battery voltage or battery charging, contact your local authorized Triumph dealer.

Should the battery voltage fall below 12.7 Volts, the battery should be charged using a Triumph approved battery charger. Always remove the battery from the motorcycle and follow the instructions supplied with the battery charger.

For extended periods of storage (beyond two weeks) the battery should be removed from the motorcycle and kept charged using a Triumph approved maintenance charger.

Similarly, should the battery charge fall to a level where it will not start the motorcycle, remove the battery from the motorcycle before charging.
Battery Installation

**Warning**
Make sure that the battery terminals do not touch the motorcycle frame. This may cause a short circuit or spark which would ignite battery gases causing a risk of personal injury.

To install the battery:
- Place the battery in the battery case.
- Reconnect the battery, positive lead (red protective cover) first and tighten the battery terminals to 39.8 lbf in (4.5 Nm).

1. Positive (+) terminal
2. Battery strap
3. Battery cover
4. Negative (-) terminal
- Apply a light coat of grease to the terminals to prevent corrosion.
- Cover the positive terminal with the red protective cap.

- Reinstall the battery cover.
- Reinstall the battery strap.

1. Tool kit tray (if equipped)
2. Diagnostic connector
3. Tool kit tray fastener
- Lower the tool kit tray (if equipped) into its original location. Reinstall and tighten the tool kit tray fastener.
- Place the diagnostic connector and any other loose items securely in the tool kit tray.
- Reinstall the rider’s seat, see page 89.
- Re-install the passenger seat, see page 88.
Maintenance

Fuses

⚠️ Warning
Always replace blown fuses with new ones of the correct rating (as specified on the fuse box cover).
Never replace a blown fuse with a fuse of a different rating.
Use of an incorrect fuse could lead to an electrical problem, resulting in motorcycle damage, loss of motorcycle control and an accident.

A blown fuse is indicated when all of the systems protected by that fuse become inoperative. When checking for a blown fuse, use the relevant tables to establish which fuse has blown.

If the motorcycle is equipped with rider mode settings, then before disconnecting the battery or removing a fuse, note and record the rider mode settings. Once the fuse has been reinstalled or the battery reconnected then the rider mode settings should be reset as noted.

Fuse Box Locations
The fuse boxes are located beneath the rider’s seat. To allow access to the fuse boxes, the passenger seat and then the rider’s seat must be removed (see page 88 and page 89).

1. Fuse box 1–all models
2. Fuse box 2–all models
3. Fuse box 3–Tiger 900 GT Pro only

Note
The starter solenoid has an additional 30 Amp fuse, attached directly to the solenoid under the battery, beneath the rider’s seat.
## Fuse Identification

### Tiger 900

Maintenance

Headlights

⚠️ Warning
Adjust road speed to suit the visibility and weather conditions in which the motorcycle is being operated.
Make sure that the headlight beam is adjusted to illuminate the road surface sufficiently far ahead without blinding oncoming traffic.
An incorrectly adjusted headlight may impair visibility causing an accident.

⚠️ Warning
Never attempt to adjust a headlight beam when the motorcycle is in motion.
Any attempt to adjust a headlight beam when the motorcycle is in motion may result in loss of control and an accident.

⚠️ Caution
Do not cover the headlight or lens with any item likely to obstruct air flow to, or prevent heat escaping from, the headlight lens.

⚠️ Caution Continued
Covering the headlight lens during operation with items of clothing, luggage, adhesive tape, devices intended to alter or adjust the headlight beam or non genuine headlight lens covers will cause the headlight lens to overheat and distort, causing irreparable damage to the headlight assembly.
Damage caused by overheating is not considered a manufacturing defect and will not be covered under warranty.
If the headlight must be covered during use - such as taping of the headlight lens required during closed-course conditions - the headlight must be disconnected.

⚠️ Caution
The use of non-approved headlight units may result in damage to the headlight unit and/or motorcycle.
Use a genuine Triumph supplied headlight unit as specified in the Triumph Parts Catalog.
Always have replacement headlight units installed by an authorized Triumph dealer.
Headlights Adjustment
The headlights can be adjusted by means of a vertical adjustment screw located on the rear of the headlight unit. There is no horizontal adjustment.

1. **Vertical adjustment screw**

To adjust the headlight:
- Switch the headlight dipped beam on.
- Turn the vertical adjustment screw on the headlight unit clockwise to lower the beam or counterclockwise to raise the beam.
- Switch the headlights off when the beam settings are satisfactory.

**Note**
There is a small triangle marking on each side of the headlight unit which indicates the height of the light within the headlight unit for adjustment purposes.

Headlights Replacement
The headlight unit is a sealed, maintenance free LED unit. The headlight unit must be replaced in the event of a failure.

**Daytime Running Light (DRL) (if equipped)**
The Daytime Running Light (DRL) is situated within the headlight assembly and is a sealed, maintenance free LED unit. The headlight unit must be replaced in the event of the failure of the DRL.
# Maintenance

## Lights

### Caution

The use of non-approved bulbs may result in damage to lenses and other lighting unit components.

In addition, the use of bulbs of incorrect wattage may cause the chassis ECM to cut power to affected lighting circuits.

Use genuine Triumph supplied bulbs as specified in the Triumph Parts Catalog.

Always have replacement bulbs installed by an authorized Triumph dealer.

## Turn Signal Lights

The motorcycle is equipped with either LED or bulb turn signal lights.

### LED Turn Signal Lights

The turn signal light units are sealed, maintenance free LED units.

### Bulb Turn Signal Lights

To replace the turn signal bulb:

- The lens on each turn signal light is held in place by a securing screw located either in the lens of the light or the light housing.
- Loosen the screw and remove the lens.
- Carefully remove the turn signal bulb.
- Installation is the reverse of the removal procedure.

## Tail/Brake Light / License Plate Light

The tail light unit is a sealed, maintenance free LED unit. The license plate light is integral to the brake/tail light unit.

## Fog Lights (if equipped)

The fog light units are sealed, maintenance free LED units.
Mirrors

⚠️ Warning

Never attempt to clean or adjust mirrors while riding the motorcycle. Removal of the rider’s hands from the handlebars while riding the motorcycle will diminish the ability of the rider to maintain control of the motorcycle.

Attempting to clean or adjust mirrors while riding the motorcycle may result in loss of control of the motorcycle and an accident.

Only attempt to clean or adjust the mirrors while stationary.

⚠️ Warning

Operation of the motorcycle with incorrectly adjusted mirrors is dangerous.

Operation of the motorcycle with incorrectly adjusted mirrors will result in loss of vision to the rear of the motorcycle. It is dangerous to ride a motorcycle without sufficient rearward vision.

Always adjust the mirrors to provide sufficient rearward vision before riding the motorcycle.

Cleaning and Storage

Cleaning
Frequent, regular cleaning is an essential part of the maintenance of your motorcycle. If regularly cleaned, the appearance will be preserved for many years.

Cleaning with cold water containing an automotive cleaner is essential at all times but particularly so after exposure to sea breezes, sea water, dusty or muddy roads and in winter when roads are treated for ice and snow.

Do not use household detergent, as the use of such products will lead to premature corrosion.

Although, under the terms of your motorcycle warranty, cover is provided against the corrosion of certain items, the owner is expected to observe this reasonable advice which will safeguard against corrosion and enhance the appearance of the motorcycle.

Preparation for Washing
Before washing, precautions must be taken to keep water off the following places.

Rear opening of the exhausts: Cover with a plastic bag secured with rubber bands.

Clutch and brake levers, switch housings on the handlebar: Cover with plastic bags.

Ignition switch and steering lock: Cover the keyhole with tape.

Remove any items of jewelry such as rings, watches, zips or belt buckles, which may scratch or otherwise damage painted or polished surfaces.

Use separate cleaning sponges or cleaning cloths for washing painted/polished surfaces and chassis areas. Chassis areas (such as wheels and under fenders) will be exposed to more abrasive road grime and dust, which may then scratch painted or polished surfaces, if the same sponge or cleaning cloths are used.
Cleaning and Storage

Where to be Careful

⚠️ Caution
Do not use high pressure spray washers or steam cleaners.
Use of high pressure spray washers and steam cleaners may damage seals, and cause water and steam to be forced into bearings and other components causing premature wear from corrosion and loss of lubrication.

⚠️ Caution
Do not spray any water at all near the air intake duct.
The air intake duct is normally located under the rider’s seat, under the fuel tank or near the steering head.
Any water sprayed in this area could enter the airbox and engine, causing damage to both items.

Do not get water near the following places:
• Air intake duct
• Any visible electrical components
• Brake cylinders and brake calipers
• Handlebar switch housings
• Steering head bearings
• Instruments
• Oil filler cap
• Rear bevel box breather (if equipped)
• Rear of headlights
• Seats
• Suspension seals and bearings
• Under the fuel tank
• Wheel bearings.

Note
Use of soaps that are highly alkaline will leave a residue on painted surfaces, and may also cause water spotting.
Always use a low alkaline soap to aid the cleaning process.
Cleaning and Storage

Washing
To wash the motorcycle, do the following:

- Make sure that the motorcycle engine is cold.
- Prepare a mixture of clean, cold water and mild automotive cleaner. Do not use a highly alkaline soap as commonly found at commercial car washes because it leaves a residue.
- Wash the motorcycle with a sponge or soft cloth. Do not use abrasive scouring pads or steel wool. They will damage the finish.
- Rinse the motorcycle thoroughly with clean, cold water.

After Washing

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Never wax or lubricate the brake discs. Always clean the brake disc with a proprietary brand of oil-free brake disc cleaner. Waxed or lubricated brake discs may cause loss of braking power and an accident.</td>
</tr>
</tbody>
</table>

After washing the motorcycle, do the following:
1. Remove the plastic bags and tape, and clear the air intakes.
2. Lubricate the pivots, bolts, and nuts.
3. Test the brakes before motorcycle operation.
4. Use a dry cloth or chamois leather to absorb water residue. Do not allow water to stand on the motorcycle as this will lead to corrosion.
5. Start the engine and run it for 5 minutes. Make sure that there is adequate ventilation for the exhaust fumes.
Care of Matt Paintwork
Matt paintwork requires no greater care than that already recommended for high gloss paintwork.
• Do not use any polish or wax on matt paintwork.
• Do not try and polish out scratches.

Care of Gloss Paintwork
Gloss paintwork should be washed and dried as described previously, then protected using a high quality automotive polish. Always follow the manufacturer’s instructions and repeat regularly to maintain your motorcycle’s appearance.

Aluminum Items—not Lacquered or Painted
Items such as brake and clutch levers, wheels, engine covers, engine cooling fins, upper and lower yokes and throttle bodies on some models must be correctly cleaned to preserve their appearance. Please contact your dealer if you are unsure which components on your motorcycle are aluminum parts not protected by paint or lacquer, and for guidance on how to clean those items.
Use a proprietary brand of aluminum cleaner which does not contain abrasive or caustic elements.
Clean aluminum items regularly, in particular after use in inclement weather, where the components must be hand washed and dried each time the machine is used.
Warranty claims due to inadequate maintenance will not be allowed.
Cleaning and Storage

Cleaning of Chrome and Stainless Steel Items
All chrome and stainless steel parts of your motorcycle must be cleaned regularly to avoid a deterioration of its appearance.

Washing
Wash as previously described.

Drying
Dry the chrome and stainless steel parts as far as possible with a soft cloth or chamois leather.

Protecting

⚠️ Caution

The use of products containing silicone will cause discoloration of the chrome and stainless steel parts and must not be used.

The use of abrasive cleaning products will damage the finish and must not be used.

When the chrome and stainless steel is dry, apply a suitable proprietary chrome cleaner on to the surface, following the manufacturer’s instructions.

It is recommended that regular protection be applied to the motorcycle as this will both protect and enhance its appearance.

Black Chrome
Items such as headlight bowls and mirrors on some models must be correctly cleaned to preserve their appearance. Please contact your dealer if you are unsure which components on your motorcycle are black chrome parts. Maintain the appearance of black chrome items by rubbing a small amount of light oil into the surface.
Cleaning and Storage

Cleaning of the Exhaust System

All parts of the exhaust system of your motorcycle must be cleaned regularly to avoid a deterioration of its appearance. These instructions can be applied to chrome, brushed stainless steel and carbon fiber components; matt painted exhaust systems should be cleaned as above, noting the care instructions in the Matt Paintwork section previously.

Note

The exhaust system must be cool before washing to prevent water spotting.

Washing

Wash as previously described.
Make sure that no soap or water enters the exhausts.

Drying

Dry the exhaust system as far as possible with a soft cloth or chamois leather. Do not run the engine to dry the system or spotting will occur.

Protecting

Caution

The use of products containing silicone will cause discoloration of the chrome and stainless steel parts and must not be used.

The use of abrasive cleaning products will damage the finish and must not be used.

When the exhaust system is dry, apply a suitable proprietary motorcycle protection spray onto the surface, following the manufacturer’s instructions.

It is recommended that regular protection be applied to the system as this will both protect and enhance the system’s appearance.
Cleaning and Storage

Seat Care

⚠️ Caution
Use of chemicals or high pressure spray washers is not recommended for cleaning the seat.
Using chemicals or high pressure spray washers may damage the seat cover.

To help maintain its appearance, clean the seat using a sponge or cleaning cloth with soap and water.

Windshield Cleaning (if equipped)

⚠️ Warning
Never attempt to clean the windshield while the motorcycle is in motion as releasing the handlebars may cause loss of motorcycle control and an accident.
Operation of the motorcycle with a damaged or scratched windshield will reduce the rider’s forward vision. Any such reduction in forward vision is dangerous and may lead to loss of motorcycle control and an accident.

⚠️ Caution
Corrosive chemicals such as battery acid will damage the windshield. Never allow corrosive chemicals to contact the windshield.

⚠️ Caution
Products such as window cleaning fluids, insect remover, rain repellent, scouring compounds, gasoline or strong solvents such as alcohol, acetone, carbon tetrachloride, etc. will damage the windshield.
Never allow these products to contact the windshield.
Cleaning and Storage

Clean the windshield with a solution of mild soap or detergent and clean, cold water.
After cleaning, rinse well and then dry with a soft, lint-free cloth.
If the transparency of the windshield is reduced by scratches or oxidation which cannot be removed, the windshield must be replaced.

Care of Leather Products
It is recommend that the leather products are periodically cleaned with a damp cloth and allowed to dry naturally at room temperature. This will maintain the appearance of the leather and ensure the long life of the product.
The Triumph leather product is a natural product and lack of care can result in damage and permanent wear.
Follow these simple instructions to prolong the life of the leather product:
• Do not use household cleaning products, bleach, detergents containing bleach or any kind of solvent to clean the leather product.
• Do not immerse the leather product in water.
• Avoid direct heat from fires and radiators which can dry out and distort the leather.
• Do not leave the leather product in direct sunlight for prolonged periods of time.
• Do not dry the leather product by applying direct heat to it at any time.
• If the leather product does get wet, absorb any excess water with a soft clean cloth then leave the leather product to dry naturally at room temperature.
• Avoid exposure of the leather product to high levels of salt, for example sea/salt water or road surfaces that have been treated during the winter for ice and snow.
Cleaning and Storage

• If exposure to salt is unavoidable, clean the leather product immediately after each exposure using a damp cloth then leave the leather product to dry naturally at room temperature.

• Gently clean any minor marks with a damp cloth then leave the leather product to dry naturally at room temperature.

• Place the leather product in a fabric bag or cardboard box to protect it when in storage. Do not use a plastic bag.

Preparation for Storage

To prepare the motorcycle for storage, do the following:

• Clean and dry the entire vehicle thoroughly.

• Fill the fuel tank with the correct grade of unleaded fuel and add a fuel stabilizer (if available), following the fuel stabilizer manufacturer’s instructions.

⚠️ Warning

Gasoline is extremely flammable and can be explosive under certain conditions.

Turn the ignition switch off. Do not smoke.

Make sure the area is well ventilated and free from any source of flame or sparks; this includes any appliance with a pilot light.

• Remove the spark plug from each cylinder and put several drops (0.17 fl oz (5 cc)) of engine oil into each cylinder. Cover the spark plug holes with a piece of cloth or rag. With the engine stop switch in the RUN position, push the starter button for a few seconds to coat the cylinder walls with oil. Install the spark plugs, tightening to 9 lbf ft (12 Nm).

• Change the engine oil and filter (see page 128).

• Check and if necessary correct the tire pressures (see page 187).
Cleaning and Storage

• Set the motorcycle on a stand so that both wheels are raised off the ground. (If this cannot be done, put boards under the front and rear wheels to keep dampness away from the tires.)
• Spray rust inhibiting oil (there are a host of products on the market and your dealer will be able to offer you local advice) on all unpainted metal surfaces to prevent rusting. Prevent oil from getting on rubber parts, brake discs or in the brake calipers.
• Lubricate and if necessary adjust the drive chain (see page 135).
• Make sure the cooling system is filled with a 50% mixture of coolant (noting that HD4X Hybrid OAT coolant, as supplied by Triumph, is pre-mixed and requires no dilution) and distilled water solution (see page 131).
• Remove the battery, and store it where it will not be exposed to direct sunlight, moisture, or freezing temperatures. During storage it should be given a slow charge (one Ampere or less) about once every two weeks (see page 161).
• Store the motorcycle in a cool, dry area, away from sunlight, and with a minimum daily temperature variation.
• Put a suitable porous cover over the motorcycle to keep dust and dirt from collecting on it. Avoid using plastic or similar non-breathable, coated materials that restrict air flow and allow heat and moisture to accumulate.

Preparation after Storage

To prepare the motorcycle to be ridden after storage, do the following:
• Install the battery (if removed) (see page 165).
• If the motorcycle has been stored for more than four months, change the engine oil (see page 128).
• Check all the points listed in the Daily Safety Checks section.
• Before starting the engine, remove the spark plugs from each cylinder.
• Put the side stand down.
• Crank the engine on the starter motor several times until the oil pressure light goes out.
• Reinstall the spark plugs, tightening to 19 lbf ft (2 Nm), and start the engine.
• Check and if necessary correct the tire pressures.
• Clean the entire vehicle thoroughly.
• Check the brakes for correct operation.
• Test ride the motorcycle at low speeds.

Approved Tires

A list of approved tires specific to these models is available from your authorized Triumph dealer, or on the Internet at www.triumph.co.uk.

⚠️ Warning

Use the recommended tires ONLY in the combinations given.
Do not mix tires from different manufacturers or mix different specification tires from the same manufacturers as this may result in loss of motorcycle control and an accident.

⚠️ Warning

Tire pressures which have been reduced for off-road riding will impair on-road stability.
Always make sure that the tire pressures are set as described in the tire pressure table for on-road use.
Operation of the motorcycle with incorrect tire pressures may cause loss of motorcycle control leading to an accident.
Specifications

**Warning**

The use of dual purpose tires will result in reduced motorcycle stability. Always operate a motorcycle equipped with dual purpose tires at reduced speeds. The permissible maximum speed must be indicated by a sticker, positioned so that it is clearly visible to the rider. Operation of the motorcycle above the permissible maximum speed may result in loss of motorcycle control and an accident.

Approved Tires
A list of approved tires specific to these models is available from your authorized Triumph dealer, or on the Internet at www.triumph.co.uk.

⚠️ Warning
Use the recommended tires ONLY in the combinations given.
Do not mix tires from different manufacturers or mix different specification tires from the same manufacturers as this may result in loss of motorcycle control and an accident.

</table>

⚠️ Warning
Tire pressures which have been reduced for off-road riding will impair on-road stability.
Always make sure that the tire pressures are set as described in the tire pressure table for on-road use.
Operation of the motorcycle with incorrect tire pressures may cause loss of motorcycle control leading to an accident.

Approved Mud and Snow/Dual Purpose Tires
A list of approved mud and snow/dual purpose tires specific to these models is available from your authorized Triumph dealer, or on the Internet at www.triumph.co.uk.
Warning

The use of mud and snow/dual purpose tires will result in reduced motorcycle stability. Always operate a motorcycle equipped with mud and snow/dual purpose tires at reduced speeds. The permissible maximum speed is 60 mph (100 km/h). This is also shown on a warning sticker on the motorcycle. Operation of the motorcycle above the permissible maximum speed may result in loss of motorcycle control and an accident.

Approval Information

This section contains approval information that is required to be included in this Owner’s Handbook.

FCC Statement

This device complies with part 15 of the Federal Communications Commission (FCC) Rules.

Operation is subject to the following two conditions:
1. This device may not cause harmful interference.
2. This device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications to the device could void the user’s authority to operate the equipment.

Tires

With reference to the Pneumatic Tires and Tubes for Automotive Vehicles (Quality Control) Order, 2009, Cl. No. 3 (c), it is declared by M/s. Triumph Motorcycles Ltd. that the tires mounted on this motorcycle meet the requirements of IS 15627: 2005 and comply with the requirements under Central Motor Vehicle Rules (CMVR), 1989.
